J. Hambrey, Michael J. Hambrey, W. B. Harland, 2011-04-14 In this 1981 substantial work M J Hambrey and W B Harland have assembled essays by leaders in the field of pre Pleistocene glacial research The work's various chapters review in depth the glacial records of Africa Antarctica Asia Australasia Europe and North and South America **Apocalypse, The Transformation of Earth** Friedrich Benesch, 2015-08-01 In the Revelation of St John spiritual worlds and spiritual entities appear both in images of the sensory world and in images of the mineral realm This book discusses these two sides of world manifestation It is often argued that the images of St John's Revelations are intended in a purely symbolic way If this is so the mineral appears as a symbol for something of a soul like and spiritual nature The Revelator however did not see symbols but rather realities even a symbol can be genuine only if something of the reality for which it stands shines through It must in a real way be inwardly identical

with what it intends the essence from which it stems Thus it must arise from the same reality otherwise it contains no meaning The images of the minerals in the Apocalypse are just as much reality as the minerals are on Earth Neither is essential both are simply manifestations of something essential Hence both are truly apocalyptic the mineral we hold in our hand and the image we hold in our mind They reveal themselves mutually This book juxtaposes the objects of sensory appearance and natural scientific research with sayings from the Revelation of St John to express the joint background of the appearances When we connect one with the other it can lead to an encounter with the essence This is an esoteric mineralogy Friedrich Benesch enables a renewed encounter between the human being and mineral being from which essence and future can then shine out Anyone wanting to look more deeply into the Book of Revelations should read this beautifully illustrated unique work on its meaning and its significance for both today and the future of humankind and the Earth Earth Materials Cornelis Klein,Anthony Philpotts,2017 Designed specifically for one semester courses this beautifully illustrated textbook explains the key concepts in mineralogy and petrology **The Preacher in Print. Langford, 1954-12-15 OUT of the Canadian earth come treasures right and rare gold silver uranium Out of the earth come the raw materials of the industry iron copper nickel and the like From deep in the earth flows the petroleum that keeps the wheels moving in our modern economy Coal for our fires lies under the soil of Canadian prairies mountains and coastal seas From the earth comes the building materials for towns and cities roads and bridges From the earth come the glass and dishes for our homes the salt for our tables and the nylons we wear Every Canadian uses the products of our mines Many persons are employed in the mining industry or in the multitude of industries dependent on its products Many Canadians are investors in the industry buying shares in mining companies or processing industries or the enterprises that sell mineral products to the public This book is the direct result of the desire expressed by Canadians in many walks of life to know more about mining It takes the interested layman on a short trip through the complex mining industry It describes very clearly and readably how the minerals were formed in the earth how they are found how they are taken out of the earth and how the ores are processed and the petroleum transformed to high grade gasoline It goes farther telling how a mine is financed how the prospector the engineer the government the mine operator financier and investor combine to make the great Canadian mineral industry what it is It tells too about the jobs in the industry about the opportunities for geologists geophysicists engineers production and physical metallurgists and many other professions that young Canadians find both challenging and rewarding This book gives the clue to the language of the mining industry conglomerate stope spudding in repressuring working option reorganization speculative risk to name only a few terms that are read on the financial page every day and which the intelligent investor wants to understand clearly Out of the Earth tells about mining as it is today We meet not just the prospector carrying his pick but the airborne magnetometer which detects mineral deposits from the sky Most readers have heard of the use of Geiger counters in locating radioactive substances but here we read also for example about the seismic methods of mineral exploration by which dynamite is fired in the earth and the shock wave patterns calculated on instruments Helping to make important points of the story clear are simple tables and 40 excellent line drawings and charts A group of photographs chosen for informational value as well as pictorial interest is included
