Loftin,1985 This provides access to a NASA History Office publication NASA SP 468 by Laurence K Loftin Jr NASA Scientific and Technical Information Branch Washington D C 1985 It traces the technical development of the airplane since World War I It describes significant aircraft that incorporated important technical innovations and served to shape the future course of aeronautical development as well as aircraft that represented the state of the art of aeronautical technology in a particular time frame or that were very popular and produced in great numbers Primary emphasis has been placed on aircraft originating in the United States The discussion is related primarily to aircraft configuration evolution and associated aerodynamic characteristics and to a lesser extent to developments in aircraft construction and propulsion The material is presented in a manner designed to appeal to the nontechnical reader who is interested in the evolution of the airplane as well as to students of aeronautical engineering or others with an aeronautical background **Flight Dynamics** Robert F. Stengel,2015-01-27 Flight Dynamics takes a new approach to the science and mathematics of aircraft flight unifying principles of aeronautics with contemporary systems analysis While presenting traditional material that is critical to understanding aircraft motions it does so in the context of modern computational tools and multivariable methods Robert Stengel devotes particular attention to models and techniques that are appropriate for analysis simulation evaluation of flying qualities and control system design He establishes bridges to classical analysis and results and explores new territory that was treated only inferentially in earlier books This book combines a highly accessible style of presentation with contents that will appeal to graduate students and to professionals already familiar with basic flight dynamics Dynamic analysis has changed dramatically in recent decades with the introduction of powerful personal computers and scientific programming languages Analysis programs have become so pervasive that it can be assumed that all students and practicing engineers working on aircraft flight dynamics have access to them Therefore this book presents the principles derivations and equations of flight dynamics with frequent reference to

MATLAB functions and examples By using common notation and not assuming a strong background in aeronautics Flight Dynamics will engage a wide variety of readers Introductions to aerodynamics propulsion structures flying qualities flight control and the atmospheric and gravitational environment accompany the development of the aircraft's dynamic equations
