Waves in an Impossible Sea Matt Strassler, 2024-03-05 Longlisted for the 2025 PEN EO Wilson Literary Science Writing Award, Big Think's Best Science Book of 2024. A theoretical physicist takes readers on an awe-inspiring journey found in no other book of science to discover how the universe generates everything from nothing at all. If you want to know what's really going on in the realms of relativity and particle physics, read this book. Sean Carroll, author of *The Biggest Ideas in the Universe*. In *Waves in an Impossible Sea*, physicist Matt Strassler tells a startling tale of elementary particles, human experience, and empty space. He begins with a simple mystery of motion: When we drive at highway speeds with the windows down, the wind beats against our faces. Yet our planet hurtles through the cosmos at 150 miles per second, and we feel nothing of it. How can our voyage be so tranquil when, as Einstein discovered, matter warps space and space deflects matter? The answer Strassler reveals is that empty space is a sea, albeit a paradoxically strange one. Much like water and air, it ripples in various ways, and we ourselves, made from its ripples, can move through space as effortlessly as waves crossing an ocean. Deftly weaving together daily experience and fundamental physics, the musical universe, the enigmatic quantum cosmic fields, and the Higgs boson, Strassler shows us how all things familiar and unfamiliar emerge from what seems like nothing at all. Accessible and profound, *Waves in an Impossible Sea* is the ultimate guide to our place in the universe.

Quantum Mind Arnold Mindell, PH.D., 2012-12. *Quantum Mind: The Edge Between Physics and Psychology*. This is the second edition with a new preface from the author. In a single volume, Arnold Mindell brings together psychology, physics, math, myth, and shamanism, not only mapping the way for next-generation science but also applying this wisdom to personal growth, group dynamics, social and political processes, and environmental issues. Beginning with a discussion of cultural impacts on mathematics, he presents esoteric but plausible interpretations of imaginary numbers and the quantum wavefunction. In this context, he discusses dreams, psychology, illness, shape-shifting, moving among realities, and the self-reflecting Universe, bringing in not only shamanism but also the Aboriginal, Greek, and Hindu myths, and even sacred geometry from the Masonic orders and the Native Americans. The book is enriched by several psychological exercises that enable the reader to subjectively experience mathematics, counting, discounting, squaring, complex conjugating, physics, parallel worlds, time travel, and shamanism, shape-shifting.

365 Days of Power Rick Renner, 2007-10. This popular collection of prayers and faith declarations is now available in a beautiful leather gift edition. Readers will learn to pray according to God's Word and His Will, enabling them to grow spiritually like never before.

Consciousness and

Subjectivity Sofia Miguens, Gerhard Preyer, 2013-05-02 Issues of subjectivity and consciousness are dealt with in very different ways in the analytic tradition and in the idealistic phenomenological tradition central to continental philosophy This book brings together analytically inspired philosophers working on the continent with English speaking philosophers to address specific issues regarding subjectivity and consciousness The issues range from acquaintance and immediacy in perception and apperception to the role of agency in bodily mine ness to self determination Selbstbestimmung through free action Thus involving philosophers of different traditions should yield a deeper vision of consciousness and subjectivity one relating the mind not only to nature or to first person authority in linguistic creatures questions which in the analytic tradition are sometimes treated as exhausting the topic but also to many other aspects of mind s understanding of itself in ways which disrupt classic inner outer boundaries
