A Critical Introduction to Scientific Realism

Paul Dicken, 2016-07-28 What are the reasons for believing scientific theories to be true The contemporary debate around scientific realism exposes questions about the very nature of scientific knowledge *A Critical Introduction to Scientific Realism* explores and advances the main topics of the debate allowing epistemologists to make new connections with the philosophy of science Moving from its origins in logical positivism to some of the most recent issues discussed in the literature this critical introduction covers the no miracles argument the pessimistic meta induction and structural realism Placing arguments in their historical context Paul Dicken approaches scientific realism debate as a particular instance of our more general epistemological investigations The recurrent theme is that the scientific realism debate is in fact a pseudo philosophical question Concerned with the methodology of the scientific realism debate Dicken asks what it means to offer an epistemological assessment of our scientific practices Taking those practices as a guide to our epistemological reflections *A Critical Introduction to Scientific Realism* fills a gap in current introductory texts and presents a fresh approach to understanding a crucial debate

Bas van Fraassen's Approach to Representation and Models in Science Wenceslao J. Gonzalez, 2014-02-19

This book analyzes Bas van Fraassen's characterization of representation and models in science. In this regard, it presents the philosophical coordinates of his approach and pays attention to his structural empiricism as a framework for his views on scientific representations and models. These are developed here through two new contributions made by van Fraassen. In addition, there are analyses of the relation between models and reality in his approach where the complexity of this conception is considered in detail. Furthermore, there is an examination of scientific explanation and epistemic values judgments. This volume includes a wealth of bibliographical information on his philosophy and relevant philosophical issues. Bas van Fraassen is a key figure in contemporary philosophy of science as the prestigious Hempel Award shows. His views on scientific representation offer new ideas on how it should be characterized, and his conception of models shows a novelty that goes beyond other empiricists' approaches of recent times. Both aspects, the characterization of scientific representation and the conception of models in science, are part of a deliberate attempt to forge a structural empiricism, an alternative to structural realism based on an elaborated version of empiricism.

The Routledge Companion to Philosophy of Science Stathis Psillos, Martin Curd, 2008-01-31. This indispensable reference source and guide to the major themes, debates, problems, and topics in philosophy of science contains fifty-five specially commissioned entries by a leading team of international contributors. Organized into four parts, it covers historical and philosophical context, debates, concepts, the individual sciences. The Companion covers everything students of philosophy of science need to know, from empiricism, explanation, and experiment to causation, observation, prediction, and more, and contains many helpful features.

Realism and Anti-Realism Stuart Brock, Edwin Mares, 2014-12-18. There are a bewildering variety of ways the terms realism and anti-realism have been used in philosophy, and furthermore, the different uses of these terms are only loosely connected with one another. Rather than give a piecemeal map of this very diverse landscape, the authors focus on what they see as the core concept: realism about a particular domain is the view that there are facts or entities distinctive of that domain and their existence and nature is in some important sense objective and mind-independent. The authors carefully set out and explain the different realist and anti-realist positions and arguments that occur in five key domains: science, ethics, mathematics, modality, and fictional objects. For each area, the authors examine the various styles of argument in support of and against realism and anti-realism, show how these different positions and arguments arise in very different domains, evaluate their success within these fields, and draw general conclusions about these assorted strategies. Error theory, fictionalism, non-cognitivism, relativism, and response-dependence are taken as the most important positions in opposition to the realist, and these are explored in depth. Suitable for advanced-level undergraduates, the book offers readers a clear introduction to a subject central to much contemporary work in metaphysics, epistemology, and philosophy of language.
