Leukocyte Membrane Determinants Regulating Immune Reactivity:

Leukocyte Membrane Determinants Regulating Immune Reactivity Vincent P. Eijssvoogel, 2012-12-02 Leukocyte Membrane Determinants Regulating Immune Reactivity is a result of the Leukocyte Culture Conference meeting held at Amsterdam in 1975 Abstracts presented in the meeting are compiled in this book The topics of these abstracts are all under leukocyte biology and include not just lymphocytes but also monocytes macrophages and granulocytes The text is composed of six major sections The first section features abstracts that deal with ligand binding and subsequent changes in membrane Section II focuses on the receptors on lymphocytes in the context of various subpopulations Immune reactivity specifically its augmentation or suppression is the main topic of Section III Gene products are emphasized in Section IV while effector functions of membrane determinants are tackled in Section V Finally Section VI features leukocyte membrane determinants in differentiation and maturation The book presents much detailed information that will be of great help to students or professionals in the study of biology specifically leukocyte biology

Leukocyte Membrane Determinants Regulating Immune Reactivity Vincent P. Eijssvoogel, Dirk Roos, Wim P. Zeijlemaker, 1976 **Leukocyte Membrane Determinants Regulating Immune Reactivity- 10th Leukocyte Culture Conference- Papers** Vincent P. Eijssvoogel, Regulatory Mechanisms in Lymphocyte Activation David Lucas, 2012-12-02 Regulatory Mechanisms in Lymphocyte Activation covers the proceedings of the 11th Leukocyte Culture Conference held at the Arizona Medical Center University of Arizona on September 19 23 1976 The contributors cover the various aspects of the conference theme Regulatory Mechanisms in Lymphocyte Activation This book is organized into 15 parts encompassing 160 chapters The three symposium parts discuss the parameters of lymphocyte activation positive regulation and suppression Considerable sections explore the membrane determinants and receptors major histocompatibility complex lymphocyte response and kinetics of DNA synthesis and cell proliferation in lymphocyte activation Other general topics covered include subpopulations of immune reactive cells leukocyte separation techniques cell interactions and ontogeny of lymphocytes The remaining parts consider the leukocyte regulatory mechanisms and issues in lymphocytotoxicity Immunologists and cell biologists will find this book invaluable

Published Scientific Papers of the National Institutes of Health National Institutes of Health (U.S.), 1977 Each issue lists papers published during the preceding year **Cellular, Molecular, and Clinical Aspects of Allergic Disorders** Sudhir Gupta, 2013-11-11 Impressive progress has been made in the general field of immunology which has made possible new understanding and pragmatic approaches to the patient with allergic disease Indeed one working in the field of immunology senses a major revolution of immunobiologic thinking much of which has relevance to the clinical practice of allergy To the practicing allergist pediatrician or internist who must deal with allergic patients the surging new information may seem confusing and bewildering As part of our comprehensive series on modern immunobiology which aims to digest this progress we believe it is appropriate to devote an entire volume to the fundamental principles new knowledge and clinical lore on

which the modern practice of allergy must be based In the present volume we strive to bring together relevant contributions from leaders in the field of immunobiology with those whose work stands at the forefront of clinical practice The advancing understanding has in numerous instances reached the point of clinical application and we have tried to encompass in this volume the entire scope of modern allergy Journal of the National Cancer Institute ,1982 **JNCI, Journal of the National Cancer Institute** National Cancer Institute (U.S.),1982 Muscle and Nonmuscle Motility Alfred Stracher,2013-10-22 Muscle and Nonmuscle Motility Volume 2 is concerned with the study of the contraction and the mechanism of movement of muscle cells in a variety of biological systems The volume provides a view of some nonmuscle motility subjects The chapters contained in the book deal with the cytoskeletal structure of cells including the red blood cell the role of clathrin in cell function mechanochemical properties of ciliary movement and the regulation of cell surface structure and function Platelet motility microtubular assembly actin in nonmuscle cells intermediate filament assembly and function and cytoskeletal proteins are tackled as well Cell biologists and biochemists will find the book a valuable source of information **The Journal of Immunology** ,1985 *Methods in Membrane Biology* Edward D. Korn,2012-12-06 Three articles make up Volume 10 of *Methods in Membrane Biology* In the first of these Papahadjopoulos Poste and Vail extensively review much of the available data on the fusion of natural membranes model membranes liposomes and natural membranes with liposomes The authors are led by their review of the experimental methods and their interpretations of the results obtained to a general theory of membrane fusion which they believe is applicable to all systems that have been studied Arguing that although protein and carbohydrate may serve in some cases to bring membranes into sufficiently close proximity for fusion to occur and in other cases to remove peripheral and integral proteins from the regions that are to undergo fusion the authors conclude that membrane fusion per se is solely a property of the lipid bilayer In their view all the experimental observations to date can be subsumed under a unifying hypothesis in which membrane fusion is the result of a phase separation in one half of the membrane bilayer brought about by the interaction of calcium ions with acidic phospholipids mostly phosphatidylserine Where half membranes already contain sufficient acidic phospholipids a local increase in calcium ion concentration may suffice to induce fusion examples might include exocytosis and fusion of intracellular membrane systems In other cases natural or experimentally induced events preceding fusion might be necessary to increase the local concentration of the acidic phospholipids in the half membrane virus or fusogenic agent induced cell to cell fusion or endocytosis for example **The Molecular Basis of Immune Cell Function** J. Gordin Kaplan,1979 Regulatory Mechanisms in Lymphocyte Activation David O. Lucas,1977 *Regulatory Mechanisms in Lymphocyte Activation* covers the proceedings of the 11th Leukocyte Culture Conference held at the Arizona Medical Center University of Arizona on September 19 23 1976 The contributors cover the various aspects of the conference theme *Regulatory Mechanisms in Lymphocyte Activation* This book is organized into 15 parts encompassing 160 chapters The three

symposium parts discuss the parameters of lymphocyte activation positive regulation and suppression Considerable sections explore the membrane determinants and receptors major histocompatibility complex **Isolation Characterization, and Utilization of T Lymphocyte Clones** C Fathman,2012-12-02 Isolation Characterization and Utilization of T Lymphocyte Clones is a summary of information regarding T lymphocyte clones including their usefulness Organized into nine parts the book begins with discussions on the soluble factors that can influence the growth of cloned T cells and the utilization of T cell hybridomas for analysis of T cell functions emphasizing the biochemical and functional properties of helper and suppressor factors The book then looks into the analysis of T cell clones and hybridomas using techniques of somatic cell genetics The clonal analysis by limiting dilution the characteristics of murine T cell clones reactive with alloantigens and soluble antigens and the human T cell clones are described as well This volume is valuable to those interested in the field of cloning of immunocompetent T cells **Dynamic Aspects of Cell Surface Organization** George Poste,Garth L. Nicolson,2013-10-22 Cell Surface Reviews Volume 3 Dynamic Aspects of Cell Surface Organization reviews the progress in the study of the dynamic nature of membrane organization The book is comprised of 14 chapters that discuss the various areas of concerns relating to membrane dynamics The coverage of the text includes techniques and methods employed in the analysis and manipulation of the various aspects of cell membranes such as freeze fracture techniques manipulation of the lipid composition of cultured animal cells and somatic genetic analysis The book also talks about some of the traits and behaviors of membrane dynamics including shedding of tumor cell surface antigens dynamics of antibody binding and complement interactions at the cell surface and structure and function of surface immunoglobulin of lymphocytes The text will be of great use to microbiologists biochemists and other researchers whose work requires a good understanding of the various aspects of cells *Leukocyte Membrane Determinants Regulating Immune Reactivity* ,1976 **Origins of Lymphocyte Diversity** Cold Spring Harbor Laboratory,1977 Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Index of Conference Proceedings Received* ,1979 **Index of Conference Proceedings Received, 1974-1978** British Library.
