Lectures on Frobenius Splittings and B-modules Wilberd van der Kallen, 1993 **Frobenius Splitting Methods in Geometry and Representation Theory** Michel Brion, Shrawan Kumar, 2007-08-08 Systematically develops the theory of Frobenius splittings and covers all its major developments Concise efficient exposition unfolds from basic introductory material on Frobenius splittings definitions properties and examples to cutting edge research **Connected at infinity II: a selection of mathematics by Indians** Rajendra Bhatia, C.S. Rajan, Ajit Iqbal Singh, 2013-01-01 *Representations of Algebraic Groups* Jens Carsten Jantzen, 2003 Gives an introduction to the general theory of representations of algebraic group schemes This title deals with representation theory of reductive algebraic groups and includes topics such as the description of simple modules vanishing theorems Borel Bott Weil theorem and Weyl's character formula and Schubert schemes and line bundles on them Handbook of Tilting Theory Lidia Angeleri Hügel, Dieter Happel, Henning Krause, 2007-01-04 A handbook of key articles providing both an introduction and reference for newcomers and experts alike

Highlights in Lie Algebraic Methods Anthony Joseph, Anna Melnikov, Ivan Penkov, 2011-10-20 This volume consists of expository and research articles that highlight the various Lie algebraic methods used in mathematical research today Key topics discussed include spherical varieties Littelmann Paths and Kac Moody Lie algebras modular representations primitive ideals representation theory of Artin algebras and quivers Kac Moody superalgebras categories of Harish Chandra modules cohomological methods and cluster algebras Studies in Lie Theory Anthony Joseph, Joseph Bernstein, 2006-01-26 Contains new results on different aspects of Lie theory including Lie superalgebras quantum groups crystal bases representations of reductive groups in finite characteristic and the geometric Langlands program **Invariant Theory in All Characteristics** Harold Edward Alexander Eddy Campbell, David L. Wehlau, 2004 This volume includes the proceedings of a workshop on Invariant Theory held at Queen's University Ontario The workshop was part of the theme year held under the auspices of the Centre de recherches mathématiques CRM in Montreal The gathering brought together two communities of researchers those working in characteristic 0 and those working in positive characteristic The book contains three types of papers survey articles providing introductions to computational invariant theory modular invariant theory of finite groups and the invariant theory of Lie groups expository works recounting recent research in these three areas and beyond and open problems of current interest The book is suitable for graduate students and researchers working in invariant theory **Computational Invariant Theory** Harm Derksen, Gregor Kemper, 2015-12-23 This book is about the computational aspects of invariant theory Of central interest is the question how the invariant ring of a given group action can be calculated Algorithms for this purpose form the main pillars around which the book is built There are two introductory chapters one on Gröbner basis methods and one on the basic concepts of invariant theory which prepare the ground for the algorithms Then algorithms for computing invariants of finite and reductive groups are discussed Particular emphasis lies on interrelations between

structural properties of invariant rings and computational methods Finally the book contains a chapter on applications of invariant theory covering fields as disparate as graph theory coding theory dynamical systems and computer vision The book is intended for postgraduate students as well as researchers in geometry computer algebra and of course invariant theory The text is enriched with numerous explicit examples which illustrate the theory and should be of more than passing interest More than ten years after the first publication of the book the second edition now provides a major update and covers many recent developments in the field Among the roughly 100 added pages there are two appendices authored by Vladimir Popov and an addendum by Norbert A Campo and Vladimir Popov

Lectures on Surgical Methods in Rigidity F. Thomas Farrell, 1996

Lectures on Quantum Computation, Quantum Error Correcting Codes and Information Theory K. R. Parthasarathy, 2006 These notes are based on a course of about twenty lectures on quantum computation quantum error correcting codes and information theory The topics include a comparative description of the basic features of classical probability theory on finite sample spaces and quantum probability theory on finite dimensional complex Hilbert spaces quantum gates and circuits simple examples of circuits arising from quantum teleportation communication through EPR pairs and arithmetical computations on a quantum computer more sophisticated examples of such circuits in the context of Fourier transform and phase estimation a detailed account of the order finding algorithm as well as the celebrated Shor's algorithm for factorising a positive integer into its prime factors There is a leisurely discussion of quantum error correcting codes with the Knill-Laflamme criterion for error correction and a number of examples of such codes whose construction is based on the Weyl commutation relations for finite abelian groups The reader may find here a brief introduction to the basic ideas of classical information theory as developed by Shannon properties of von Neumann's quantum entropy and relative entropy as well as a proof of Schumacher's noiseless quantum coding theorem The Holevo bound for transmission of classical information through encoding by quantum states followed by measurements is derived The only background assumed of the reader is linear algebra on finite dimensional complex vector spaces and elementary classical probability theory on finite sample spaces These notes are aimed at mathematicians and computer scientists who are curious to know the mystery behind a quantum computer and the possibility of communicating information using the principles of elementary quantum theory

Galois Cohomology of Elliptic Curves

John Coates, R. Sujatha, 2000 This book is based on the material presented in four lectures given by J Coates at the Tata Institute of Fundamental Research The original notes were modified and expanded in a joint project with R Sujatha The book discusses some aspects of the Iwasawa theory of elliptic curves over algebraic fields Let E be an elliptic curve defined over an algebraic number field F The fundamental idea of the Iwasawa theory is to study deep arithmetic questions about E/F via the study of coarser questions about the arithmetic of E over various infinite extensions of F

Proceedings of the International Colloquium on Algebraic Groups and Homogeneous Spaces V. B. Mehta, 2007 The area of algebraic groups and homogeneous spaces is one in which major advances have been made in recent decades This was the theme of the twelfth International Colloquium organized by the Tata Institute of Fundamental Research in January 2004 and this volume constitutes the proceedings of that meeting This volume contains articles by several leading experts in central topics in the area including representation theory flag varieties Schubert varieties vector bundles loop groups and Kac Moody Lie algebras Galois cohomology of algebraic groups and Tannakian categories In addition to the original papers in these areas the volume includes a survey on representation theory in characteristic p by H Andersen and an article by T A Springer on Armand Borel s work in algebraic groups and Lie groups
