From Idea To Building Issues In Architecture:

From Idea to Building Michael Brawne, 1992 Both for architects and for general readers concerned with the effect of the built environment explores how the design process influences the architectural outcome of a building and how it fits into the overall artistic and technological state of the society Draws on recent work in the philosophy of architecture and on case studies many of them Brawne's own projects Highly illustrated Annotation copyright by Book News Inc Portland OR

Managing the Building Design Process Gavin Tunstall, 2006 This volume explains the designer's role in the creation of new buildings from the development of the plan through to completion It expands on the first edition including sections on CAD and sustainability incorporating updates to legislation and adding new illustrations and discussion points Thinking Through Twentieth-Century Architecture Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 Thinking Through Twentieth Century Architecture connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students **Specifying Buildings** David T Yeomans, 2007-08-22 Providing an overview of specifying from selecting materials and products to writing the specification documents Specifying Buildings is a new guide to this important part of the construction process Where it differs from most books is in covering the management of the specification process making sure that the design intent is transferred to the building assembly as specified Covering a wide range of practices Stephen Emmitt and David Yeomans have ensured the book has global relevance with specific differences between UK Australia and the US identified Case studies demonstrate how specifying works in practice This book will prove invaluable to students of building construction and architecture as well as professionals in the industry Architectural Technology Stephen Emmitt, 2009-02-12 This core textbook brings together for the first time the technical legal social and philosophical issues under the umbrella of architectural technology Part 1 covers the influences that affect the way we build the environmental agenda the human

factors buildability time and costs Part 2 takes the reader through the life of a typical building project from briefing through design and assembly to use and eventual disassembly Part 3 tackles some of the underlying issues facing the architectural technologist from the communication of details to technological innovation Architectural Technology bridges the knowledge gap between design and construction enabling the architectural technologist to apply their unique skill in a creative and innovative way As a textbook aimed at those studying for membership of BIAT this is clearly very thorough and has the recommendation of their Vice President Education However it can also justifiably earn its place on the bookshelf of anybody involved in the construction process as a reference and to aid an understanding of others he she will be working with to develop an environment of which to be proud Building Engineer July 2002 *ICoRD'13* Amaresh Chakrabarti,Raghu V. Raimund Abraham [UN]BUILT Brigitte Groihofer, 2016-12-05 No detailed description available for Raimund Abraham UN BUILT Architecture From the Outside In Robert Gutman, 2012-04-17 Architecture and sociology have been fickle friends over the past half century in the 1960s architects relied on sociological data for design solutions and sociologists were courted by the most prestigious design schools to lecture and teach Twenty years later at the height of postmodernism it was passe to be concerned with the sociological aspects of architecture Currently the rising importance of sustainability in building not to mention an economical crisis brought on in part by a real estate bubble have forced architects to consider themselves in a less autonomous way perhaps bringing the profession full circle back to a close relationship with sociology Through all these rises and dips Robert Gutman was a strong and steady voice for both architecture and sociology Gutman a sociologist by training infiltrated architecture's ranks in the mid 1960s and never looked back A teacher for over four decades at Princeton's School of Architecture Gutman wrote about architecture and taught generations of future architects all while maintaining an outsider status that allowed him to see the architectural profession in an insightful unique way

folding inward as a condition of an interior specificity Whether it be a small structure such as a tramping hut or a tiny house a large complex interior environment such as an airport or shopping mall handmade with local materials such as Samoan fale or the result of manufacturing processes assembling artificial and prefabricated elements as in the case of a spacecraft boat or train interiors are augmented mediated generated or embellished by technologies The effect of these technologies is not neutral one's experience of an interior is significantly influenced by the affective resonance of its technologies
