**Nanotechnology in Construction** Zdenek Bittnar, Peter J. M. Bartos, Jiri Nemecek, V. Smilauer, J. Zeman, 2009-04-21 The 3rd International Symposium on Nanotechnology in Construction NICOM 3 follows the highly successful NICOM 1 Paisley UK 2003 and NICOM 2 Bilbao Spain 2005 Symposia The NICOM3 symposium was held in Prague Czech Republic from May 31 to June 2 2009 under the auspices of the Czech Technical University in Prague It was a cross disciplinary event bringing together R D experts and users from different fields all with interest in nanotechnology and construction The conference was aimed at Understanding of internal structures of existing construction materials at nano scale Modification at nano scale of existing construction materials Production and properties of nanoparticulate materials nanotubes and novel polymers Modeling and simulation of nanostructures Instrumentation techniques and metrology at nano scale Health and safety issues and environmental impacts related to nanotechnology during research manufacture and product use Review of current legislation Societal and commercial impacts of nanotechnology in construction their predictions and analysis Industrial Metrology Graham T. Smith, 2013-04-17 The subject of this book is surface metrology in particular two major aspects surface texture and roundness It has taken a long time for manufacturing engineers and designers to realise the usefulness of these features in quality of conformance and quality of design Unfortunately this awareness has come at a time when engineers versed in the use and specification of surfaces are at a premium Traditionally surface metrology usage has been dictated by engineers who have served long and demanding apprenticeships usually in parallel with studies leading to technician level qualifications Such people understood the processes and the achievable accuracies of machine tools thereby enabling them to match production capability with design requirements This synergy has been made possible by the understanding of adherence to careful metrological procedures and a detailed knowledge of surface measuring instruments and their operation in addition to wider inspection room techniques With the demise in the UK of polytechnics and technical colleges

this source of skilled technicians has all but dried up The shortfall has been made up of semi skilled craftsmen or inexperienced graduates who cannot be expected to satisfy traditional or new technology needs Miniaturisation for example has had a profound effect Engineering parts are now routinely being made with nanometre surface texture and flatness At these molecular and atomic scales the engineer has to be a physicist

popular books are explaining the achievements and promises of nanoscience. It may therefore seem surprising that this is the first collection of studies that considers nanoscience and nanotechnologies from the critical perspective of Science and Technology Studies (STS). However, when one appreciates that such a critical perspective needs to be historically informed, it often involves intimate acquaintance with the research process. Accordingly, this book on the historical, analytical, and ethical study of nanoscience and technology has come together in a period of several years. Though it presents only first results, these results for the most part stem from sustained investigations of nanoscience and nanotechnologies and of the contexts that are shaping their development. Nanoscience and technologies are developing very quickly, and for this reason both pose a challenge to the more reflective approach commonly taken by science studies while at the same time requiring the perspective provided by science studies scholars. Many are convinced that nothing meaningful can be said about the social and ethical implications of nanotechnologies at this early stage, but one can already see what programmatic attitudes go into nanoscale research, what metaphors are shaping it, and what conception of nature is implicit in its vision. It is also often assumed that in order to consider all aspects of nanotechnologies, it is sufficient to know a bit of the science and to have some ethical intuitions. This collection of papers establishes that one also needs to appreciate nanoscale research and development in the larger context of the changing relations of science, technology, and society.
