

# GLEIM ONLINE GROUND SCHOOL STUDY GUIDE 1

## AIRPLANES AND AERODYNAMICS

### 1.1 THE AIRPLANE AND FLIGHT CONTROLS

1. The diagram below illustrates the basic components of the airplane. The structural units of any conventional airplane include fuselage, wings, empennage (tail section), and landing gear.

- a. The **landing gear** supports the airplane during the landing and on the ground. It consists of the main landing gear and either a nosewheel or a tailwheel.
  - 1) The main landing gear consists of two main wheels and struts. Each main strut is attached to the primary structure of the fuselage or the wing.
  - 2) Nosewheel (tricycle) airplanes have the third wheel in front of the main landing gear (i.e., under the nose). Tailwheel (conventional) airplanes have the third wheel under the tail.
    - a) The nosewheel (or tailwheel) is designed to steer the airplane on the ground. It is not stressed for excessive impacts or loads. It is designed to carry only the weight of the forward (or rearward) portion of the airplane.
