explores why stone tools attract modern people and what making them means to those who pursue this art He describes how new members are incorporated into the knapping community how novices learn the techniques of knapping and find their roles within the group how the community is structured and how ethics rules and beliefs about knapping are developed and transmitted He also explains how the practice of knapping relates to professional archaeology the trade in modern replicas of stone tools and the forgery of artifacts Whittaker's book thus documents a fascinating subculture of American life and introduces the wider public to an ancient and still rewarding craft *Before Modern Humans* Grant S. McCall, 2020-09-10

This fascinating volume assessing Lower and Middle Pleistocene African prehistory argues that the onset of the Middle Stone Age marks the origins of landscape use patterns resembling those of modern human foragers Inaugurating a paradigm shift in our understanding of modern human behavior Grant McCall argues that this transition related to the origins of home base residential site use occurred in mosaic fashion over the course of hundreds of thousands of years He concludes by proposing a model of brain evolution driven by increasing subsistence diversity and intensity against the backdrop of larger populations and Pleistocene environmental unpredictability McCall argues that human brain size did not arise to support the complex patterns of social behavior that pervade our lives today but instead large human brains were co-opted for these purposes relatively late in prehistory accounting for the striking archaeological record of the Upper Pleistocene **The Acheulian**

Flint Daggers in Prehistoric Europe Catherine J. Frieman, Berit Valentin Eriksen, 2015-12-31 For more than a century flint daggers have been among the most closely studied and most heavily published later prehistoric lithic tools It is well established that they are found across Europe and beyond and that many were widely circulated over many generations Yet few researchers have attempted to discuss the entirety of the flint dagger phenomenon The present volume brings together

papers that address questions of the regional variability and socio technical complexity of flint daggers and their production. It focuses on the typology, chronology, technology, functionality and meaning of flint and other lithic daggers produced primarily in Europe but also in the Eastern Mediterranean and East Asia in prehistory. The 14 papers by leading researchers provide a comprehensive overview of the state of knowledge concerning various flint dagger corpora as well as potential avenues for the development of a research agenda across national, regional and disciplinary boundaries. The volume originates from a session held at the 2011 meeting of the European Association of Archaeology but includes additional commissioned contributions.

*The Archive of Place* William Turkel, 2011-11-01. The Archive of Place weaves together a series of narratives about environmental history in a particular location, British Columbia's Chilcotin Plateau. In the mid 1990s the Chilcotin was at the centre of three territorial conflicts. Opposing groups in their struggle to control the fate of the region and its resources invoked different understandings of its past and different types of evidence to justify their actions. These controversies serve as case studies as William Turkel examines how people interpret material traces to reconstruct past events, the conditions under which such interpretation takes place and the role that this interpretation plays in historical consciousness and social memory. It is a wide ranging and original study that extends the span of conventional historical research.

Detailed case studies show the relevance of behavioral method and theory to the wider field of archaeological studies. The book will be invaluable to students of archaeology and anthropology.
