

Flowers

Eventually, the plant will mature and begin to develop buds, which will become flowers.

Flowers may have colours or scents to attract insects and birds.

Pollination

The male part of the flower (anther) releases pollen that must reach the female part (stigma) to become fertilised. Some plants are self-pollinating, while others need birds, animals, insects, or the wind to help move pollen to the stigma.

Pollen fertilises the ovule at the base of the flower to produce fruits that will contain seeds.

Life Cycle of a Flowering Plant

Seeds

Seeds contain a food supply for the development of the tiny plant. They have an outer coat for protecting the seed until germination.

Germination

Every seed contains an embryo that will go on to becoming a plant. Most seeds need water to germinate. The root emerges first and grows down into the soil. A shoot will push up towards the light and will eventually develop into a stem and leaves. Seedlings need water, light, warmth, and nutrients from the soil as they grow into small plants.

Growth

The leaves that unfold use light and carbon dioxide to produce energy for the plant to grow. This process is called photosynthesis.

As the seedling develops, its roots grow into the soil to absorb water and nutrients. Roots help the plant to stay upright as it grows taller.

Did You Know?

The green colour of plant leaves is due to a special pigment called chlorophyll.

Understanding Flowers and Flowering Second Edition Beverley Glover, 2014-02 Flowers are the beautiful and complex reproductive structures of the angiosperms one of the most diverse and successful groups of living organisms The underlying thesis of this book is that to fully understand plant development and why flowers differ in shape structure and colour it is necessary to understand why it is advantageous for them to look like they do Conversely in order to fully understand plant ecology it is necessary to appreciate how floral structures have developed and evolved Uniquely this book addresses flowers and flowering from both a molecular genetic perspective considering flower induction development and self incompatibility and an ecological perspective looking at the selective pressures placed on plants by pollinators and the consequences for animal plant co evolution Understanding Flowers and Flowering the first edition of which won BES Marsh Book of the Year in 2009 begins by considering the evolution of flowers and the history of research into their development This is followed by a detailed description of the processes which lead to flower production in model plants The book then examines how flowers differ in shape structure and colour and how these differences are generated Finally it assesses the role of these various aspects of floral biology in attracting pollinators and ensuring successful reproduction This new edition has been completely revised

and updated to reflect the latest advances in the field especially an increased understanding of the evolution of floral traits New chapters consider the genetic basis of the floral transition in diverse species as well as the evolutionary lability of floral form There is a new focus throughout on both phylogenetic position and morphological diversity across the angiosperm phylogeny Understanding Flowers and Flowering continues to provide the first truly integrated study of the topic one that discusses both the how and why of flowering plant reproductive biology Life Cycle of a Sunflower Kirsty

An Impossible Desert Flower Kari Kilgore, 2021-09-22 When the World Goes Strange Connie's first time in the desert sends her into sensory overload So seeing and smelling the unusual comes as no surprise But when her suspicion turns from unlikely to impossible Connie brings in an expert And realizes odd doorways pass into worlds she never imagined What secrets does the desert hold if you know how to look An excerpt from An Impossible Desert Flower Where the Strange Seems Ordinary Connie resisted the urge to bring her smartphone out yet again to make sure she still wasn't getting any signal At the moment it was a remarkably expensive digital camera holding the dozens of plant photos she'd already taken on this trip She turned herself out toward her personal undiscovered country and kept going After a few minutes she stopped hands on her hips raising her nose to scent the air like a good hound dog She'd tried to pretend she'd imagined it earlier but now she'd smelled it too many times A campfire clear as anything with something that had to be meat roasting And now horses as if she'd wandered into a sensory recreation of an Old West movie But she'd never seen any old rancher or cowboy movie that featured an enticingly sweet scent much more like a lilac than anything that should be growing out here And yet again just like that the odd smells disappeared
