## **Isabelle/HOL A Proof Assistant For Higher Order Logic:**

*Isabelle/HOL* Tobias Nipkow, Lawrence C. Paulson, Markus Wenzel, 2003-07-31 This volume is a self contained introduction to interactive proof in high order logic HOL using the proof assistant Isabelle 2002 Compared with existing Isabelle documentation it provides a direct route into higher order logic which most people prefer these days It bypasses first order logic and minimizes discussion of meta theory It is written for potential users rather than for our colleagues in the research world Another departure from previous documentation is that we describe Markus Wenzel's proof script notation instead of ML tactic scripts The latter make it easier to introduce new tactics on the fly but hardly anybody does that Wenzel's dedicated syntax is elegant replacing for example eight simplification tactics with a single method namely simp with associated theorems The book has three parts The first part Elementary Techniques shows how to model functional programs in higher order logic Early examples involve lists and the natural numbers Most proofs are two steps long consisting of induction on a chosen variable followed by the auto tactic But even this elementary part covers such advanced topics as nested and mutual recursion The second part Logic and Sets presents a collection of lower level tactics that you can use to apply rules selectively It also describes Isabelle/HOL's treatment of sets functions and relations and explains how to define sets inductively One of the examples concerns the theory of model checking and another is drawn from a classic textbook on formal languages
