Issues And Perspectives In Landscape Ecology:

Issues and Perspectives in Landscape Ecology John A. Wiens, Michael R. Moss, 2005-04-14 A series of essays which address a wide array of past current and future issues in landscape ecology

Issues and Perspectives in Landscape Ecology John A. Wiens, Michael R. Moss, 2005 Through a series of personal essays by leading landscape ecologists this book addresses a wide array of past current and future issues in landscape ecology The essays are informative and entertaining and span multiple spectrums addressing theory and practice science and application conservation and utilization and aquatic and terrestrial systems

Development and Perspectives of Landscape Ecology O. Bastian, Uta Steinhardt, 2013-03-14 Development and status of landscape ecology subject of this book During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The roots of landscape ecology are geography and biology The term landscape ecology was first coined by the German scientist Carl Troll in 1939 the development center of landscape ecology was in Central Europe Recently also other parts of the world became powernd centers of landscape ecology especially Northern America American approaches partly differ essentially from the European because they are focused esp on biogeography and population dynamics In Europe however the geographical roots of landscape ecology play a major role Landscape is defined as a complex of abiotic biotic and human components Mainly due to linguistic barriers the international discussion does not take notice of approaches and experiences from non anglophone countries in a sufficient manner Therefore this book considers more the German and European views on landscape ecology than the books which were published before It tries to bridge the gaps between theory and practice of landscape ecology as well between the German European and American approaches The book gives a fundamental representation of landscape ecology which proves to be a young but an interesting and very important transdisciplinary science for the solution of environmental problems Both the theoretical basis and practical application of landscape ecology are considered

Foundation Papers in Landscape Ecology John A. Wiens, 2007 The editors begin with articles that illuminate the discipline's diverse scientific foundations such as L

The Routledge Handbook of Landscape Ecology Robert A. Francis, James D.A. Millington, George L.W. Perry, Emily S. Minor, 2021-09-09 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation

and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important reference text for a wide range of students and academics in ecology geography biology and interdisciplinary environmental studies **Toward Gleasonian Landscape Ecology**, 2010

The fusion of individualistic community ecology with the Hutchinsonian niche concept enabled a broad integration of ecological theory spanning all the way from the niche characteristics of individual species to the composition structure and dynamics of ecological communities Landscape ecology has been variously described as the study of the structure function and management of large heterogeneous land areas Any reading of the published landscape ecology literature shows near uniformity in the adoption of a categorical patch mosaic paradigm However if biological communities are multivariate gradients of species composition with each species responding individualistically to particular combinations of limiting factors is a categorical patch based representation appropriate We evaluate the sufficiency of several patch based representations of vegetation at the landscape level to explain the composition of the plant community Classified vegetation maps all performed poorly in explaining the composition and structure of forest trees among plots Different categorical vegetation maps provided largely independent explanations of species variability Individual species models based on spectral topographic and climatic variables vastly out performed those produced using the classified maps By moving from a landscape ecological paradigm based on categorical patches to one based on quantitative species and environmental responses across continuous space it will be possible to both produce much more effective predictions of species distributions and ecological processes and remove much of the disjunction between landscape ecology and mainstream community ecology theory

The SAGE Handbook of Biogeography Andrew Millington, Mark Blumler, Udo Schickhoff, 2011-09-22 A superb resource for understanding the diversity of the modern discipline of biogeography and its history and future especially within geography departments I expect to refer to it often Professor Sally Horn University of Tennessee As you browse through this fine book you will be struck by the diverse topics that biogeographers investigate and the many research methods they use Biogeography is interdisciplinary and a commonly voiced concern is that one biogeographer may not readily understand another's research findings A handbook like this is important for synthesising situating explaining and evaluating a large literature and pointing the reader to informative publications Geographical Research A valuable contribution in both a research and teaching context If you are biologically trained it provides an extensive look into the geographical tradition of biogeography covering some topics that may be less familiar to those with an evolution ecology background Alternatively if you are a geography student researcher or lecturer it will provide a useful reference and will be invaluable to the non biogeographer who suddenly has the teaching of an introductory biogeography course thrust upon them Adam C Algar *Frontiers of Biogeography* The SAGE Handbook of Biogeography is a manual for

scoping the past present and future of biogeography that enable readers to consider where relevant how similar biogeographical issues are tackled by researchers in different schools In line with the concept of all SAGE Handbooks this is a retrospective and prospective overview of biogeography that will Consider the main areas of biogeography researched by geographers Detail a global perspective by incorporating the work of different schools of biogeographers Explore the divergent evolution of biogeography as a discipline and consider how this diversity can be harnessed Examine the interdisciplinary debates that biogeographers are contributing to within geography and the biological sciences Aimed at an international audience of research students academics researchers and practitioners in biogeography the text will attract interest from environmental scientists ecologists biologists and geographers alike Essentials of Landscape Ecology Kimberly A. With, 2019 Presents the principles theory methods and applications of landscape ecology and is supplemented by numerous examples and case studies from a variety of systems **Research Paper RMRS**, 1998 *Key Topics in Landscape Ecology* Jianguo Wu, Richard J. Hobbs, 2007-03-29 Landscape ecology is a relatively new area of study which aims to understand the pattern of interaction of biological and cultural communities within a landscape This book brings together leading figures from the field to provide an up to date survey of recent advances identify key research problems and suggest a future direction for development and expansion of knowledge Providing in depth reviews of the principles and methods for understanding landscape patterns and changes the book illustrates concepts with examples of innovative applications from different parts of the world Forming a current state of the science for the science of landscape ecology this book forms an essential reference for graduate students academics professionals and practitioners in ecology environmental science natural resource management and landscape planning and design **Geopedology** Joseph Alfred Zinck, Graciela Metternicht, Gerardo Bocco, Héctor Francisco Del Valle, 2015-12-23 This book offers a proven approach for reliable mapping of soil landscape relationships to derive information for policy planning and management at scales ranging from local to regional It presents the theoretical and conceptual framework of the geopedologic approach and a bulk of applied research showing its application and benefits for knowledge generation relevant to geohazard studies land use conflict analysis land use planning land degradation assessment and land suitability analysis Soil is a vital resource for society at large and an important determinant of the economic status of nations The intensification of natural disasters and the increased land use competition for food and energy have raised awareness of the relevant role the pedosphere plays in natural and anthropogenic environments Recent papers and global initiatives show a renewed interest in soil research and its applications for improved planning and management of this fragile and finite resource *Pedodiversity* Juan José Ibáñez, James G. Bockheim, 2013-04-08 Soil diversity pedodiversity is part of our natural and cultural heritage The preservation of the pedosphere is essential for the protection of the biosphere and the Earth's systems the regulation of climate and for world food security In this book reputed international experts discuss the state of the art of pedodiversity

analysis analyzing **Landscape Ecological Applications in Man-Influenced Areas** Sun-Kee Hong, Nobukazu Nakagoshi, Bojie Fu, Yukihiro Morimoto, 2007-06-02 Since the last century of ecological history landscape ecologists have played a role in solving many hot issues linking development and conservation of landscape Recently cause and consequences of landscape change are significantly related to rapid urbanization and land transformation in populated area Therefore ecological applications on the man influenced area are a worldwide issue and challenge in landscape ecology The aim of Landscape Ecological Applications in Man Influenced Areas is not only to expand concept of landscape ecology but also to apply its principle to man influenced ecosystems New dimensions of landscape ecological research in a global change such as urbanization biodiversity and land transformation are explored in this book This book also includes several case studies concerning landscape analysis and evaluation using spatial analysis and landscape modelling for establishing sustainable management strategy in urban and agricultural landscapes The subtitle of the book suggests the integrative and ubiquitous landscape planning considering harmony of man and nature systems in the socio economic and cultural background Such key issues and technology of landscape research will provide implements and guidebook for decision makers and land planners as well as teachers and students at universities **Forest Landscape Ecology** Ajith H. Perera, Lisa Buse, Thomas Crow, 2006-12-13 Forested landscapes have provided many important testing grounds for the development and application of landscape ecological principles and methods in North America This central role of forests in landscape ecology emerged for several reasons Forest cover is prominent in many regions of North America from the temperate deciduous forests of the east to the coniferous forests of the north and west Changes in forest spatial patterns are readily apparent to the human eye natural disturbances and timber harvests alter the arrangement of forest age classes across the landscape and this in turn influences many species and ecosystem processes land use changes have produced profound fluctuations in forest cover over several centuries increasing residential development in rural areas is often concentrated within forests and public lands include many forested landscapes Management actions such as varying the amount size and location of harvests also represent landscape scale experiments that provide valuable opportunities for study Finally forest patterns are readily detectable from remote imagery and are thus amenable to study at broad scales For these reasons forests have provided motivation and many opportunities for studying the complex relationships between patterns and processes in many areas The importance of landscape level considerations in the management and conservation of forested landscapes has become increasingly important and a variety of stakeholders are involved **Ecology of Hierarchical Landscapes** Jiquan Chen, 2006 The idea for this book grew out of 1 the realisation that development of the theory of landscape ecology has now reached the point where rigorous field work is required to validate models test assumptions and ideas of scaling theory and refine our understanding of landscape features and their delineation 2 the relative scarcity of compilations that have examined the role of field research or interdisciplinary management applications in advancing the science of landscape

ecology and 3 the increasing amount of information coming out of the Chequamegon Integrated Field Project CIFP on relevant topics This book synthesises the experiences and lessons learned from the CIFP project and other relevant landscape studies in an attempt to demonstrate the utility of field studies and emerging technology to the advancement of the science This book is organised to synthesise and update knowledge on research topics mentioned previously with an emphasis on ecological consequences i e implications for ecological function of the approach to and understanding of these topics across levels of the ecological hierarchy Landscape Perspectives Marc Antrop, Veerle Van Eetvelde, 2017-12-19 Climb a mountain and experience the landscape Try to grasp its holistic nature Do not climb alone but with others and share your experience Be sure the ways of seeing the landscape will be very different We experience the landscape with all senses as a complex dynamic and hierarchically structured whole The landscape is tangible out there and simultaneously a mental reality Several perspectives are obvious because of language culture and background Many disciplines developed to study the landscape focussing on specific interest groups and applications Gradually the holistic way of seeing became lost This book explores the different perspectives on the landscape in relation to its holistic nature We start from its multiple linguistic meanings and a comprehensive overview of the development of landscape research from its geographical origins to the wide variety of today's specialised disciplines and interest groups Understanding the different perspectives on the landscapes and bringing them together is essential in transdisciplinary approaches where the landscape is the integrating concept

Landscape Ecology Dean L Urban, 2024-12-01 This is methods tools textbook that covers the fundamental tasks in research and management at the landscape scale It brings together tools from a range of disciplines and presents them in a natural workflow that a practitioner can appreciate Alternative texts cover a narrower range of topics and or present the information without reference to a natural workflow The book begins with 2 fundamental applications that introduce the scope and challenges of working at the landscape scales sampling design and species distribution modeling These motivate several chapters that digress to cover the primary tools that ecologists use to work with multivariate and spatial data The book then returns to applications including site prioritization interpreting and forecasting landscape change and integrated assessment The tasks themselves follow a logical workflow of collecting and analyzing data applying the analyses to management decisions and interpreting the outcomes of these decisions in an integrated framework This book stems from two graduate level courses in Landscape Ecology taught at the Nicholas School of the Environment at Duke University The subject has evolved over time from a concepts based overview of what landscape ecology is to a more applied practicum on how one does landscape ecology As landscape ecology has matured as a discipline its perspectives on spatial heterogeneity and scale have begun to permeate into a wide range of other fields including conservation biology ecosystem management and ecological restoration Thus this textbook will bring students from diverse backgrounds to a common level of understanding and will prepare them with the practical knowledge for a career in conservation and ecosystem management

Sustainable Development and Planning III A. Kungolos, C. A. Brebbia, Élias Beriatos, 2007 In recent years in many countries there has been an increase in spatial problems that has led to planning crisis Planning problems often connected with uneven development deterioration of the quality of urban life and destruction of the environment The increase urbanisation of the world coupled with global issues of the environmental pollution resource shortage and economic restructuring demand that we make our cities places worth living in Problems of environmental management and planning are not restricted to urban areas Environments such as rural areas forests coastal regions and mountains face their own problems that require urgent solutions in order to avoid irreversible damages The use of modern technologies in planning gives us new potential to monitor and prevent environmental degradation Effective strategies for management should consider planning and regional development two closely related disciplines and emphasise the demand to handle these matters in an integrated way Containing papers presented at the Third International Conference on Sustainable Development and Planning this book addresses the subjects of regional development in an integrated way as well as in accordance with the principles of sustainability Notable topics include Regional Planning City Planning Rural Development Environmental Impact Assessment Environmental Management Environmental Legislation and Policy Integrated Territorial and Environmental Risk Analysis Ecosystems Analysis Protection and Remediation Social and Cultural Issues Environmental Economics Geo Informatics Urban Landscapes Transportation Waste Management and Resources Management

Landscape Genetics
Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits, 2015-11-09 LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS Edited by Niko Balkenhol Samuel A Cushman Andrew T Storfer Lisette P Waits Landscape genetics is an exciting and rapidly growing field melding methods and theory from landscape ecology and population genetics to address some of the most challenging and urgent ecological and evolutionary topics of our time Landscape genetic approaches now enable researchers to study in detail how environmental complexity in space and time affect gene flow genetic drift and local adaptation However learning about the concepts and methods underlying the field remains challenging due to the highly interdisciplinary nature of the field which relies on topics that have traditionally been treated separately in classes and textbooks In this edited volume some of the leading experts in landscape genetics provide the first comprehensive introduction to underlying concepts commonly used methods and current and future applications of landscape genetics Consistent with the interdisciplinary nature of the field the book includes textbook like chapters that synthesize fundamental concepts and methods underlying landscape genetics Part 1 chapters on advanced topics that deserve a more in depth treatment Part 2 and chapters illustrating the use of concepts and methods in empirical applications Part 3 Aimed at beginning landscape geneticists and experienced researchers alike this book will be helpful for all scientists and practitioners interested in learning teaching and applying landscape genetics

Environmental Risk Assessment and Management from a Landscape Perspective Lawrence A. Kapustka, Wayne G.

Landis,2010-07-15 An important guide to assessing and managing the environment from a landscape perspective Ecological relationships are nested within the landscape Identifying the relevant spatial and temporal scales is critical for an effective understanding of ecological functions that human societies depend upon Moreover human encroachment into natural areas or changes in climate can alter spatial relationships which in turn can negatively affect vital plant and wildlife patterns and weaken economic structures needed to sustain human societies This book is the first to combine multiple disciplines into one cohesive strategy to study these crucial connections and looks toward building a social paradigm that embraces the dynamics of ecological systems This book Integrates landscape ecology environmental risk assessment valuation of ecological goods and services and environmental management decision processes into one single source Includes chapters on quantitative measures Bayesian modeling economic analysis and sustainable landscapes Covers marine forest agricultural and pharmaceutical risk assessment Has a chapter on predicting climate change risk to ecosystems Has a companion ftp site with color graphics animations and risk assessment tools With material that is accessible across all knowledge levels Environmental Risk Assessment and Management from a Landscape Perspective moves beyond looking solely at chemical contaminants to diagnose environmental threats and aims to accomplish practical risk assessment in a manner that supports long term sustainable management
