Kovvali, Mahesh Banavar, Andreas Spanias, 2022-06-01 The Kalman filter is the Bayesian optimum solution to the problem of sequentially estimating the states of a dynamical system in which the state evolution and measurement processes are both linear and Gaussian Given the ubiquity of such systems the Kalman filter finds use in a variety of applications e g target tracking guidance and navigation and communications systems The purpose of this book is to present a brief introduction to Kalman filtering The theoretical framework of the Kalman filter is first presented followed by examples showing its use in practical applications Extensions of the method to nonlinear problems and distributed applications are discussed A software implementation of the algorithm in the MATLAB programming language is provided as well as MATLAB code for several example applications discussed in the manuscript **Beyond the Kalman Filter: Particle Filters for Tracking**

**Applications** Branko Ristic , Sanjeev Arulampalam, Neil Gordon, 2003-12-01 For most tracking applications the Kalman filter is reliable and efficient but it is limited to a relatively restricted class of linear Gaussian problems To solve problems beyond this restricted class particle filters are proving to be dependable methods for stochastic dynamic estimation Packed with 867 equations this cutting edge book introduces the latest advances in particle filter theory discusses their relevance to defense surveillance systems and examines defense related applications of particle filters to nonlinear and non Gaussian problems With this hands on guide you can develop more accurate and reliable nonlinear filter designs and more precisely predict the performance of these designs You can also apply particle filters to tracking a ballistic object detection and tracking of stealthy targets tracking through the blind Doppler zone bi static radar tracking passive ranging bearings only tracking of maneuvering targets range only tracking terrain aided tracking of ground vehicles and group and extended object tracking

Autonomous and Autonomic Systems: With Applications to NASA Intelligent Spacecraft Operations and Exploration Systems Walt Truskowski, Harold Hallock, Christopher Rouff, Jay Karlin, James Rash, Michael Hinchey, Roy Sterritt, 2009-11-12 In the early 1990s, NASA's Goddard Space Flight Center started researching and developing autonomous and autonomic ground and spacecraft control systems for future NASA missions. This research started by experimenting with and developing expert systems to automate ground station software and reduce the number of people needed to control a spacecraft. This was followed by research into agent-based technology to develop autonomous ground control and spacecraft. Research into this area has now evolved into using the concepts of autonomic systems to make future space missions self-managing and giving them a high degree of survivability in the harsh environments in which they operate. This book describes much of the results of this research. In addition, it aims to discuss the needed software to make future NASA space missions more completely autonomous and autonomic. The core of the software for these new missions has been written for other applications or is being applied gradually in current

missions or is in current development It is intended that this book should document how NASA missions are becoming more autonomous and autonomic and should point to the way of making future missions highly tonomous and autonomic What is not covered is the supporting hardware of these missions or the intricate software that implements orbit and at tude determination on board resource allocation or planning and scheduling though we refer to these technologies and give references for the interested reader *Proceedings of the Princeton Conference on Information Sciences and Systems* ,1974
