Karoo Ecological Patterns And Processes:

The Karoo W. Richard J. Dean, Suzanne Milton, 1999-06-24 The succulent and Nama karoo form part of the arid south western zone of Africa a vast region of rugged landscapes and low treeless vegetation Studies of this unique biome have yielded fascinating insights into the ecology of its flora and fauna This book originally published in 1999 is the first to synthesise these studies presenting information on biogeographic patterns and life processes form and function of animals and plants foraging ecology landscape level dynamics and anthropogenic influences Detailed analyses of the factors distinguishing the biota of the Karoo from that of other temperate deserts are given and generalisations about semi arid ecosystems challenged The ideas expounded the ecological principles reviewed and the results presented are relevant to all those working in the extensive arid and semi arid regions of the world

Contested Karoo: Interdisciplinary perspectives on change and continuity in South Africa's drylands Cherryl Walker, M Timm Hoffman, 2024-05-15 This interdisciplinary collection explores significant land use changes in South Africa's semi arid Karoo region and their implications for social justice and the environment across different scales It brings together recent scholarship by established and younger researchers in both the social and the natural sciences to examine the ways in which the Karoo is being reconfigured as a new resource frontier and the tensions and contestations that result Along with ongoing mining major investments in astronomy notably the Square Kilometre Array radio telescope in renewable and non renewable sources of energy solar wind potential shale gas mining in biodiversity conservation and commercial game farming are reshaping land use and authority in this vast and long marginalised area While promising significant benefits to society at large these developments are built on older histories of dispossession and extractivism histories that many Karoo residents fear are being reproduced in new forms today Collectively these dynamics place this unique region at the centre of national and global concerns around climate change the politics of knowledge production the conservation of threatened biodiversity and the meaning and possibility of sustainable development These issues are explored through a series of case studies of selected developments complemented by chapters providing more historical context and general overviews While challenging perceptions of this region as a peripheral wasteland this collection raises conceptual and policy questions that resonate far beyond the Karoo itself It also highlights the importance of interdisciplinary collaboration in research aimed not only at understanding but also at responding appropriately to the mounting challenges of our time

The Biology of Mediterranean-type Ecosystems Karen J. Esler, Anna L. Jacobsen, R. Brandon Pratt, 2018 This book provides a concise but comprehensive introduction to Mediterranean type ecosystems with the emphasis being on the organisms that dominate these regions although their management conservation and restoration will also be considered

Fynbos Nicky Allsopp, Jonathan F. Colville, G. Anthony Verboom, 2014-09-18 South Africa's fynbos region has intrigued biologists for centuries It has achieved iconic status as a locus of megadiversity and therefore a place to study the ecological underpinnings of massive evolutionary radiations

Researchers have made great advances over the past two decades in unravelling the complexities of fynbos ecology and evolution and the region has contributed significant insights into the adaptive radiations of large lineages conservation science pollination biology invasive plant biology and palaeoanthropology Lessons from the fynbos offer much of value for understanding the origin maintenance and conservation of diversity anywhere in the world This book provides the first synthesis of the field for 20 years bringing together the latest ecological and evolutionary research on the South African global biodiversity hotspots of the Greater Cape Floristic Region the iconic fynbos and succulent karoo It explores the historical and modern physical and biological environment of this region the circumstances and processes which have fostered its remarkable biodiversity and the role this diversity has played in the emergence of modern humans It also discusses the challenges of contemporary management and conservation of the region s biodiversity in the face of accelerating global change

Encyclopedia of Biodiversity, 2013-02-05 The 7 volume *Encyclopedia of Biodiversity* Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

Strategic Opportunism: What Works in Africa Brian John Huntley, 2023-02-28 This open access book provides a synthesis of six projects across ten countries each of which have been sustained for two or more decades and which illustrate how success can be achieved regardless of systems of governance of a nation s wealth or of culture Detailed narratives are presented on the key personalities that have conceived conducted and concluded long term projects personal stories of vision failure frustration and persistence ultimately leading to success The case studies vary widely in their geography and goals The single handed commitment to re discover the last surviving populations of Giant Sable in the miombo woodlands of central Angola through the capture translocation and establishment of robust breeding herds of this magnificent antelope contrasts with the massively funded three decade programme with over one hundred participants that reversed the annual loss to predation by feral cats of 455 000 seabirds from a sub Antarctic island Similarly the foresight of

Zimbabwean and Namibian ecologists to place rural communities at the centre of conservation programmes by giving value to wildlife populations and benefits to local people transformed a land degradation problem to a socio ecological solution Across ten countries building capacity in botanical collection documentation and herbarium management expanded into a global project to place the knowledge base of Africa s flora onto an electronic data system accessible to researchers and conservation planners in even the most remote corners of the continent None of these projects enjoyed immediate results Each required leadership skills that combined vision a generosity of spirit fortuitous timing and the exploitation of unexpected opportunities

Phosphorus in Action Else K. Bünemann,Astrid Oberson,Emmanuel Frossard,2010-11-08

Phosphorus P is a finite resource which is essential for life It is a limiting nutrient in many ecosystems but also a pollutant which can affect biodiversity in terrestrial ecosystems and change the ecology of water bodies This book collects the latest information on biological processes in soil P cycling which to date have remained much less understood than physico chemical processes The methods section presents spectroscopic techniques and the characterization of microbial P forms as well as the use of tracers molecular approaches and modeling of soil plant systems The section on processes deals with mycorrhizal symbioses microbial P solubilization soil macrofauna phosphatase enzymes and rhizosphere processes On the system level P cycling is examined for grasslands arctic and alpine soils forest plantations tropical forests and dryland regions Further P management with respect to animal production and cropping and the interactions between global change and P cycling are treated

Pests and Pollinators of Vegetable and Oilseed Crops Dharam P. Abrol,2019-03-21

Pest management for vegetable crops and safety provision for the pollinators is a challenging task in the context to increase vegetable productivity without upsetting the ecological balance The book Pests and Pollinators of Vegetable and Oilseed Crops aims to integrate and develop pest control strategies by minimizing their impact on beneficial insect species such as natural enemies and pollinators for enhancing fruit production and quality A detailed account is provided on pests and pollinators of oilseed crops such as Cruciferous Solanaceous Umbelliferous Cucurbitaceous Malvaceous Leguminous and Alliaceae The compilation of this book is unique as it does not deal only with the conventional way of pest management for different crops it takes into consideration the role of pollinators and their profitable utilization in the larger context of ecologically based pest management and safety of pollinators An exemplary attempt is made to promote a large diverse sustainable and dependable bee pollinator workforce that can meet the challenges of optimizing food production in the twenty first century and beyond

Perspectives in Biophysical Plant Ecophysiology William Kirby Smith, 2009 Park S Nobel pioneered the coupling of cellular physical chemistry with plant physiology providing a sound physicochemical interpretation of the laws of diffusion to a rapidly expanding field of plant physiological ecology His classical textbook is the only one of its kind to provide an extensive array of quantitative problems and solutions in the field of plant biophysics and ecophysiology extending from the molecular to the ecological level In this festschrift former graduate students and postdocs as well as colleagues of Prof Nobel present a series of reviews that include scales from sub cellular to

global and topics that range from desert succulent biology to the physiology of alpine plants encompassing basic research and applications in agronomy and conservation biology This state of the field survey provides current and useful information for professionals and graduate students while illustrating the broad span of the influence that Nobel s career has had on modern ecophysiology

Nomadic Desert Birds W. Richard J. Dean,2013-06-29 My interest in the behaviour and movements of birds of arid and semi arid ecosystems began when my wife Sue Milton and I were Roy Siegfried Director at that time of the Percy approached by Prof FitzPatrick Institute of African Ornithology to set up a project to investigate granivory in the South African Karoo Sue and I spent some time finding a suitable study site setting up accommodations and an automatic weather station at Tierberg in the southern Karoo near the village of Prince Albert and planning projects Among our first projects was a transect where we noted plant phe nology measured seed densities on the soil surface counted birds observed ant activity measured soil surface temperatures and col lected whatever climate data we could at 40 sites along a 200 km oval route Along the way we became interested in the marked presence and absence of birds at certain sites abundant birds one day and very few birds at the same site a month later Subsequent counts along fixed transects through shrublands confirmed that a number of bird species were highly nomadic over short and long distances locally and regionally leading to speculation on how widespread these movements were in the arid ecosystems of the world
