Williams, 2007-04-23 Originally published in 1989 Karst Geomorphology and Hydrology became the leading textbook on karst studies This new textbook has been substantially revised and updated The first half of the book is a systematic presentation of the dissolution kinetics chemical equilibria and physical flow laws relating to karst environments It includes details of the many environmental factors that complicate their chemical evolution with a critique of measurement of karst erosion rates The second half of the book looks at the classification system for cave systems and the influence of climate and climatic change on karst development The book ends with chapters on karst water resource management and a look at the important issues of environmental management including environmental impact assessment environmental rehabilitation tourism impacts and conservation values Practical application of karst studies are explained throughout the text This new edition strengthens the book's position as the essential reference in the field Karst geoscientists will not dare to stray beyond arm's reach of this volume It is certain to remain the professional standard for many decades Journal of Cave and Karst Studies August 2007 Karst Hydrogeology

Petar T. Milanović, 1981 **Methods in Karst Hydrogeology** Nico Goldscheider, David Drew, 2014-04-21 Filling a gap in the karst literature this book describes methods most appropriate for use in karst terrains These include methods that are basic to all hydrogeological studies such as hydraulic investigations hydrochemistry geophysics isotope chemistry and modelling with the emphasis placed on their application to karst systems The various chapters of this book are written by experts in all the different methods Most of the chapters are multi-authored and the authors include hydrogeologists who are experienced in evaluating a variety of karst environments and who together provide a balanced view of all the karst methods

Karst Hydrogeology, Geomorphology and Caves Jo De Waele, Francisco Gutierrez, 2022-08-01 Karst Hydrogeology Geomorphology and Caves A Comprehensive Resource Covering All Aspects of Karst Hydrogeology Geomorphology and Caves This essential book covers all physical chemical and geological aspects of karst science It reviews current knowledge on hydrogeology geomorphology and caves in karst based on the vast existing literature and investigations carried out by the authors worldwide The different topics are profusely illustrated with color figures and images from all continents and climates showing the scientific and aesthetic appeal of karst environments The book covers in a systematic way the significant features of karst rocks the chemistry and kinetics of their dissolution the rate and distribution of karst denudation the unique hydrogeology of karst terrains the landforms endemic to karst the morphology of caves and their diverse sedimentary records and the multiple processes that lead to the formation of underground voids Overall the work reflects the increasing recognition of karst as a fundamental part of the Earth's dynamic systems and helps readers understand this multidisciplinary field from a holistic and nuts and bolts perspective Some of the ideas discussed within the book include How karst is gaining importance for human development because of its valuable resources groundwater and associated

environmental problems impacts and hazards The enormous technological developments achieved in recent years Recent major breakthroughs in the field and their influence on other scientific disciplines The central role played by karst science for understanding and mitigating global environmental issues global warming depletion of resources human induced hazards For all scientists working in karst and for students and lecturers of karst related programs this book serves as a valuable all in one source It is also a valuable resource for professional hydrogeologists the petroleum industry environmental geologists and of course speleologists the last true geographic explorers in the world

Principles of Karst Hydrogeology Antonio Pulido-Bosch, 2020-09-15 This book reviews the hydrogeology of karst systems starting with the classifications from the applied point of view and then the hydraulic parameters porosity permeability and transmissivity It also addresses the karstification process its resulting forms and their hydrogeological significance Besides the author describes possible models of karstic aquifers and their characterization The book also explains the classical methods for analyzing hydrograms of karst springs and deepens the analysis of time series as a preliminary phase to the mathematical simulation of karst aquifers Finally it introduces the hydrogeochemical characterization of karst of the processes involved as well as the possible pollution and protection of karst aquifers This book is intended to be of interest for professionals in hydrogeology as well as graduate and undergraduate students

Karst Hydrogeology and Human Activities: Impacts, Consequences and Implications David Drew, 2017-10-05 One quarter of the world's population lives in karst terrains yet karsts are highly vulnerable to stresses caused by human activity This book surveys human impact on karst water showing that the increasing pollution of the environment has to a great extent spoiled sensitive karst ecosystems This text examines such consequences and offers proposals for future solutions and strategies Part One provides an overview of the functioning of karsts and of human interaction with karst environments over several millennia Part Two consists of a systematic examination of the major areas of human activity affecting karst waters such as

agriculture industry mining and water exploitation Finally Part Three views the effects on karst groundwater within a broader societal and legislative perspective and considers possible changes of methodology and approach
