*Partition Problems in Topology* Stevo Todorčević, 1989 This book presents results on the case of the Ramsey problem for the uncountable When does a partition of a square of an uncountable set have an uncountable homogeneous set This problem most frequently appears in areas of general topology measure theory and functional analysis Building on his solution of one of the two most basic partition problems in general topology the S space problem the author has unified most of the existing results on the subject and made many improvements and simplifications The first eight sections of the book require basic knowledge of naive set theory at the level of a first year graduate or advanced undergraduate student The book may also be of interest to the exclusively set theoretic reader for it provides an excellent introduction to the subject of forcing axioms of set theory such as Martin's axiom and the Proper forcing axiom

*Introduction to Inverse Problems for Differential Equations* Alemdar Hasanov Hasanoglu, Vladimir G. Romanov, 2017-07-31 This book presents a systematic exposition of the main ideas and methods in treating inverse problems for PDEs arising in basic mathematical models though it makes no claim to being exhaustive Mathematical models of most physical phenomena are governed by initial and boundary value problems for PDEs and inverse problems governed by these equations arise naturally in nearly all branches of science and engineering The book's content especially in the Introduction and Part I is self contained and is intended to also be accessible for beginning graduate students whose mathematical background includes only basic courses in advanced calculus PDEs and functional analysis Further the book can be used as the backbone for a lecture course on inverse and ill posed problems for partial differential equations In turn the second part of the book consists of six nearly independent chapters The choice of these chapters was motivated by the fact that the inverse coefficient and source problems considered here are based on the basic and commonly used mathematical models governed by PDEs These chapters describe not only these inverse problems but also main inversion methods and techniques Since the most distinctive features of any inverse problems related to PDEs are hidden in the properties of the corresponding solutions to direct problems special attention is

paid to the investigation of these properties      **Lectures on Invariant Theory** Igor Dolgachev,2003-08-07 The primary goal of this 2003 book is to give a brief introduction to the main ideas of algebraic and geometric invariant theory It assumes only a minimal background in algebraic geometry algebra and representation theory Topics covered include the symbolic method for computation of invariants on the space of homogeneous forms the problem of finite generatedness of the algebra of invariants the theory of covariants and constructions of categorical and geometric quotients Throughout the emphasis is on concrete examples which originate in classical algebraic geometry Based on lectures given at University of Michigan Harvard University and Seoul National University the book is written in an accessible style and contains many examples and exercises A novel feature of the book is a discussion of possible linearizations of actions and the variation of quotients under the change of linearization Also includes the construction of toric varieties as torus quotients of affine spaces      *Statistical Analysis and Forecasting of Economic Structural Change* Peter Hackl,2013-03-09 In 1984 the University of Bonn FRG and the International Institute for Applied System Analysis IIASA in Laxenburg Austria created a joint research group to analyze the relationship between economic growth and structural change The research team was to examine the commodity composition as well as the size and direction of commodity and credit flows among countries and regions Krelle 1988 reports on the results of this Bonn IIASA research project At the same time an informal IIASA Working Group was initiated to deal with problems of the statistical analysis of economic data in the context of structural change What tools do we have to identify nonconstancy of model parameters What type of models are particularly applicable to nonconstant structure How is forecasting affected by the presence of nonconstant structure What problems should be anticipated in applying these tools and models Some 50 experts mainly statisticians or econometricians from about 15 countries came together in Lodz Poland May 1985 Berlin GDR June 1986 and Sulejov Poland September 1986 to present and discuss their findings This volume contains a selected set of those conference contributions as well as several specially invited chapters      Mathematical Foundations of Computer Science 2012 Branislav Rovan,Vladimiro Sassone,Peter Widmayer,2012-08-01 This volume constitutes the refereed proceedings of the 37th International Symposium on Mathematical Foundations of Computer Science MFCS 2012 held in Bratislava Slovakia in August 2012 The 63 revised full papers presented together with 8 invited talks were carefully reviewed and selected from 162 submissions Topics covered include algorithmic game theory algorithmic learning theory algorithms and data structures automata formal languages bioinformatics complexity computational geometry computer assisted reasoning concurrency theory databases and knowledge based systems foundations of computing logic in computer science models of computation semantics and verification of programs and theoretical issues in artificial intelligence      **Recent Advances in Riemannian and Lorentzian Geometries** Krishan L. Duggal,Ramesh Sharma,2003 This volume covers material presented by invited speakers at the AMS special session on Riemannian and Lorentzian geometries held at the annual Joint Mathematics Meetings in Baltimore Topics covered include classification of
