Governing Capital:

Governing Capital Sylvia Maxfield, 2019-05-15 How does international financial integration affect development in newly industrializing countries Sylvia Maxfield offers a challenging interpretation of the Mexican political economy in light of this complex question In an increasingly internationalized world she argues capital controlling economic policies can have benefits that especially for the newly industrializing Latin American countries addressed here outweigh the efficiency costs of government intervention

Regulating Capital David Andrew Singer, 2015-11-15 Financial instability threatens the global economy The volatility of capital movements across national borders has led many observers to argue for a reformed global financial architecture a body of consistent rules and institutions to prevent financial crises Yet regulators have a decidedly mixed record in their attempts to create global standards for the financial system David Andrew Singer seeks to explain the varying pressures on regulatory agencies to negotiate internationally acceptable rules and suggests that the variation is largely traceable to the different domestic political pressures faced by regulators In *Regulating Capital* Singer provides both a theory of the effects of domestic pressures on international regulation and a detailed analysis of regulators attempts at international rulemaking in banking securities and insurance Singer addresses the complexities of

global finance in an accessible style and he does not turn away from the more dramatic aspects of globalization he makes clear the international implications of bank failures and stock market crashes the rise of derivatives and the catastrophic financial losses caused by Hurricane Katrina and the events of September 11 Finance and Governance of Capital Cities in Federal Systems Enid Slack,Rupak Chattopadhyay,2009-11-21 Using capital cities in Australia Belgium Canada Ethiopia Germany India Mexico Nigeria South Africa Switzerland and the United States as case studies contributors examine federal policies towards capital cities with a particular emphasis on how capital cities are funded and governed and the extent to which the federal government compensates them for their unique role Social Capital and Sport Governance in Europe Margaret Groeneveld,Barrie Houlihan,Fabien Ohl,2010-09-13 Although there is significant interest in the social role of sport in fostering civil society from both policymakers and academics there is a lack of evidence of the specific role of sport federations in this system This book critically presents the mechanisms and structures in a selection of sport federations within a variety of European countries that illuminate the varied relationships between not for profit sport federations their members governments and the citizens they represent The contributors explore the contrasts and synergies between core social capital theoretical perspectives and how these may be informed by and or shape the realities of governance from different perspectives within the sport system **Capital Punishment: New Perspectives** Peter Hodgkinson,2016-04-08 This collection asks questions about the received wisdom of the debate about capital punishment Woven through the book questions are asked of and remedies proposed for a raft of issues identified as having been overlooked in the traditional discourse It provides a long overdue review of the disparate groups and strategies that lay claim to abolitionism The authors argue that capital litigators should use their skills challenging the abuses not just of process but of the conditions in which the condemned await their fate namely prison conditions education leisure visits medical services etc In the aftermath of successful constitutional challenges it is the beneficiaries arguably those who are considered successes having been saved from the death penalty and now serving living death penalties of one sort or another who are suffering the cruel and inhumane alternative Part I of the book offers a selection of diverse nuanced examinations of death penalty phenomena scrutinizing complexities frequently omitted from the narrative of academics and activists It offers a challenging and comprehensive analysis of issues critical to the abolition debate Part II offers examinations of countries usually absent from academic analysis to provide an understanding of the status of the debate locally with opportunities for wider application

Who Needs to Open the Capital Account Olivier Jeanne,Arvind Subramanian,John Williamson,2012 Most countries emerged from the Second World War with capital accounts that were closed to the rest of the world Since then a process of capital account opening has occurred with the result that all developed and many emerging market countries now have capital accounts that are both de facto and de jure open while many developing countries also have de facto openness This study examines this in part by considering some of the first lessons from the current global financial crisis This crisis may

change the terms of the debate on capital account liberalization in a deeper and more lasting way than any of the crises of the past two decades because it may mark a reversal in the secular trend of financial liberalization at the core of the international financial system. The current crisis also raises new questions about the appropriate policy responses to boom bust dynamics in domestic credit and in international credit flows. Intellectual consistency is needed between the domestic and international dimensions of financial regulation and the policies aimed at dealing with boom bust dynamics in domestic and international credit.

Capital Formation, Governance and Banking Edith Klein, 2005. This new volume presents leading international analyses of some of the most dynamic issues in the financial sector. Venture capital in the Singapore as well as the evolution of family firms are examined. The potential conflict of banks as shareholders is scrutinised as well. Other topics here include interest rates and their predictability and smoothing of banking services, ownership of financial institutions and its potential impact on profitability. In addition, the predominance or lack thereof of foreign banks and the effect of them is viewed from an economic perspective.

Integrity, Risk and Accountability in Capital Markets Justin O'Brien, George Gilligan, 2013-09-27. The global economy is yet to recover from the aftershocks of the Global Financial Crisis (GFC). In particular, many national economies are struggling to adjust to austerity programs that are a direct result of the toxic effects of the crisis. Governments, regulatory agencies, international organisations, media commentators, finance industry organisations and professionals, academics and affected citizens have offered partial explanations for what has occurred. Some of these actors have sought to introduce legislative and other regulatory initiatives to improve operational standards in capital markets. However, the exposure post GFC of the scandal surrounding the manipulation over many years of the London Interbank Offered Rate (LIBOR) highlighted that the most important obstacles to counter the destructive potential of our global finance system are normative, not technical. Regulating the culture of the finance sector is one of the greatest challenges facing contemporary society. This edited volume brings together leading professionals, regulators and academics with knowledge of how cultural forces shape integrity, risk and accountability in capital markets. The book will be of benefit not only to industry, regulatory and academic communities whose focus is upon financial markets and professionals. It is of value to any person or organisation interested in how the cultural underpinnings of the finance sector shape how capital markets actually operate and are regulated. It is a stark lesson of history that financial crises will occur. As national economies become ever more interconnected and interdependent under conditions of global financial capitalism, it becomes ever more important to know how cultural and other normative forces might be adjusted to militate against the effects of future disasters.

Capital Ungoverned Michael Maurice Loriaux,1997 Japan South Korea Mexico France and Spain once exercised significant control over the allocation of credit and used that control to facilitate economic adjustment and industrial development In the 1980s all that changed Why and how these states dismantled their activist credit policies is the subject of Capital Ungoverned The volume brings together five specialists in the economics and politics of these various states to assess the internal and global changes that prompted them to adopt financial liberalization Comparison reveals the distinctive political and institutional logic that guided liberalization in each country from the role of a newly dominant capitalist class in Korea to the replacement of state financing by private financing and self financing in Japan from the maneuvers of the banking establishment in Spain to attempts to attract foreign capital in Mexico At the same time these cases clarify the importance of international factors in particular the shifts that occurred in U S policy as it sought to respond to the effects of uneven growth in the world economy

Taming the Tide of Capital Flows Atish R. Ghosh,Jonathan D. Ostry,Mahvash S. Qureshi,2018-01-12 A comprehensive examination of policy measures intended to help emerging markets contend with large and volatile capital flows While always episodic in nature capital flows to emerging market economies have been especially volatile since the global financial crisis After peaking at 680 billion in 2007 flows to emerging markets turned negative at the onset of crisis in 2008 then rebounded only to recede again during the U S sovereign debt downgrade in 2011 Since then flows have continued to swing wildly leaving emerging market policy makers wondering whether they can put in place policies during the inflow phase that will soften the blow when flows subsequently recede This book offers the first comprehensive treatment of policy measures intended to help emerging markets contend with large and volatile capital flows The authors all IMF experts explain that in the spirit of liberalization and deregulation in the 1980s and 1990s many emerging market governments eliminated capital inflow controls along with outflow controls By 2012 however capital inflow controls were again acknowledged as legitimate policy tools Focusing on the macroeconomic and financial stability risks associated with capital flows the authors combine theoretical and empirical analysis to consider the interaction between monetary exchange rate macroprudential and capital control policies to mitigate these risks They examine the effectiveness of various policy tools discuss the practical considerations and multilateral implications of their use and provide concrete policy advice for dealing with capital inflows

The growth of global finance since 1960 constitutes one of the most important transformations in social relations during the twentieth century Using historical statistical and graphical techniques State Institutions Private Incentives and Global Capital examines three important aspects of this phenomenal shift in the international political economy First Andrew Sobel explores the reawakening of the international financial markets mapping their extraordinary transformation since the early 1960s and discussing the role of politics in that metamorphosis The author then offers a fresh understanding of the systematic differences in access for borrowers in this rapidly transforming and expanding global capital pool He then demonstrates the influence of political factors in producing differential access to the global capital pool Showing how the character and stability of a country's political system affects investors's decisions to invest in that country Sobel breaks new ground in understanding the basis for the frequent admonitions by the World Bank and others that a stable political and legal system are essential for states to attract significant foreign investment With the growing debate about the effect of financial interdependence on the ability of states to conduct economic policy and indeed to preserve their independence in the face of unprecedented economic linkages this book will be of interest to political scientists and economists as well as policy makers concerned with the impact of financial globalization and the causes of differentials in access to capital Andrew C Sobel is Assistant Professor of Political Science and Resident Fellow Center in Political Economy Washington University St Louis He is the author of Domestic Choices International Markets Dismantling National Barriers and Liberalizing Securities Markets
