Grammar Of The Kabardian Language:

A Grammar of the Kabardian Language John Colarusso, 1992 This is the first comprehensive grammar of a non Indo European language from the Northwest Caucasian family in a language other than Russian Kabardian is complex at every level A Grammar of the Kabardian Language gives the reader the first account of the syntax of this language It will give the area specialist access to the language It will give the linguist interested in complex languages access to an extraordinarily difficult language and it will give the theoretical linguist access to a language that exhibits topological exotica at every level K"ėbėrdeibzė grammatika Amjad M. Jaimoukha, 2005 of its grammar from phonetics to the lexicon Language Emma L. Pavey, 2010-08-19 Most of the time we communicate using language without considering the complex activity we are undertaking forming words and sentences in a split second This book introduces the analysis of language structure combining both description and theory within a single practical text It begins by examining words and parts of words and then looks at how words work together to form sentences that communicate meaning Sentence patterns across languages are also studied looking at the similarities and the differences we find in how languages communicate meaning The book also discusses how context can affect how we structure our sentences the context of a particular language and its structures the context of old and new information for us and our addressee s and the context of our culture Constructions Vladimir Petrovich Nedi?a?lkov, Zlatka Guentchéva, 2007 This monograph constitutes the first comprehensive investigation of reciprocal constructions and related phenomena in the world's languages Reciprocal constructions of the type The two boys hit each other The poets admire each other's poems have often been the subject of language particular studies but it is only in this work that a truly global comparative picture emerges Nine stage setting chapters dealing with general and theoretical matters are followed by 40 chapters containing in depth descriptions of reciprocals in individual languages by renowned specialists The introductory papers provide a conceptual and terminological framework that allows the authors of the individual chapters to characterize their languages in comparable terms making it easy for the reader to see points of commonality between languages and constructions that have never been compared before This set of volumes is an indispensable starting point and will be a lasting reference work for any future studies of reciprocals The World **Atlas of Language Structures** Martin Haspelmath, 2005-07-21 The World Atlas of Language Structures is a book and CD combination displaying the structural properties of the world's languages 142 world maps and numerous regional maps all in colour display the geographical distribution of features of pronunciation and grammar such as number of vowels tone systems gender plurals tense word order and body part terminology Each world map shows an average of 400 languages and is accompanied by a fully referenced description of the structural feature in question The CD provides an interactive electronic version of the database which allows the reader to zoom in on or customize the maps to display bibliographical sources and to establish correlations between features The book and the CD together provide an indispensable source of

information for linguists and others seeking to understand human languages The Atlas will be especially valuable for linguistic typologists grammatical theorists historical and comparative linguists and for those studying a region such as Africa Southeast Asia North America Australia and Europe It will also interest anthropologists and geographers More than fifty authors from many different countries have collaborated to produce a work that sets new standards in comparative linguistics No institution involved in language research can afford to be without it **Copulas** Regina Pustet, 2003-06-12 Copulas in English the verb to be are conventionally defined functionally as a means of relating elements of clause structure especially subject and complement and considered to be semantically empty or meaningless. They have received relatively little attention from linguists Dr Pustet in this extensive cross linguistic study goes some way towards correcting this neglect In doing so she takes issue with both accepted definition and description She presents an analysis of grammatical descriptions of over 160 languages drawn from the language families of the world She shows that some languages have a single copula others several and some none at all In a series of statistical analyses she seeks to explain why by linking the distribution of copulas to variations in lexical categorization and syntactic structure She concludes by advancing a comprehensive theory of copularization which she relates to language classification and to theories of language change notably grammaticalization The Oxford Handbook of Languages of the Caucasus Maria Polinsky, 2020-11-21 The Oxford Handbook of Languages of the Caucasus is an introduction to and overview of the linguistically diverse languages of southern Russia Georgia Azerbaijan and Armenia Though the languages of the Caucasus have often been mischaracterized or exoticized many of them have cross linguistically rare features found in few or no other languages. This handbook presents facts and descriptions of the languages written by experts The first half of the book is an introduction to the languages with the linguistic profiles enriched by demographic research about their speakers It features overviews of the main language families as well as detailed grammatical descriptions of several individual languages. The second half of the book delves more deeply into theoretical analyses of features such as agreement ellipsis and discourse properties which are found in some languages of the Caucasus Promising areas for future research are highlighted throughout the handbook which will be of interest to linguists of all subfields Argument Structure and Grammatical Relations Pirkko Suihkonen, Bernard Comrie, Valery Solovyev, 2012-07-18 This book is a collection of articles dealing with various aspects of grammatical relations and argument structure in the languages of Europe and North and Central Asia LENCA Topics covered with respect to individual languages are split intransitivity Basque causativization Agul transitives and causatives Korean and Japanese aspectual domain and quantification Finnish and Udmurt head marking principles Athabaskan languages and pragmatics Eastern Khanty and Xibe Typology of argument structure properties of give LENCA typology of agreement systems asymmetry in argument structure typology of the Amdo Sprachbund spatial realtors Northeastern Turkic core argument patterns languages of Northern California and typology of grammatical relations LENCA are the topics of articles based on

cross linguistic data The broad empirical sweep and the fine tuned theoretical analysis highlight the central role of argument The Synchronic and Diachronic structure and grammatical relations with respect to a plethora of linguistic phenomena Phonology of Ejectives Paul D. Fallon, 2013-12-16 This study is the first book length examination of ejectives and their phonological patterning deepening the empirical understanding of ejectives and contributing to both phonological theory and Investigations of the Syntax | Semantics | Pragmatics Interface Robert D. Van Valin, to typologies of sound change Jr., 2008-11-21 Investigations of the Syntax Semantics Pragmatics Interface presents on going research in Role and Reference Grammar in a number of critical areas of linguistic theory verb semantics and argument structure the nature of syntactic categories and syntactic representation prosody and syntax information structure and syntax and the syntax and semantics of complex sentences In each of these areas there are important results which not only advance the development of the theory but also contribute to the broader theoretical discussion In particular there are analyses of grammatical phenomena such as transitivity in Kabardian the verb less numeral quantifier construction in Japanese and an unusual kind of complex sentence in Wari Chapakuran Brazil which not only illustrate the descriptive and explanatory power of the theory but also present interesting challenges to other approaches In addition there are papers looking at the implications and applications of Role and Reference Grammar for neurolinguistic research parsing and automated text analysis **Universals in Comparative Morphology** Jonathan David Bobaljik, 2012-09-28 An argument for and account of linguistic universals in the morphology of comparison combining empirical breadth and theoretical rigor This groundbreaking study of the morphology of comparison yields a surprising result that even in suppletion the wholesale replacement of one stem by a phonologically unrelated stem as in good better best there emerge strikingly robust patterns virtually exceptionless generalizations across languages Jonathan David Bobaljik describes the systematicity in suppletion and argues that at least five generalizations are solid contenders for the status of linguistic universals. The major topics discussed include suppletion comparative and superlative formation deadjectival verbs and lexical decomposition Bobaljik's primary focus is on morphological theory but his argument also aims to integrate evidence from a variety of subfields into a coherent whole In the course of his analysis Bobaljik argues that the assumptions needed bear on choices among theoretical frameworks and that the framework of Distributed Morphology has the right architecture to support the account In addition to the theoretical implications of the generalizations Bobaljik suggests that the striking patterns of regularity in what otherwise appears to be the most irregular of linguistic domains provide compelling evidence for Universal Grammar The book strikes a unique balance between empirical breadth and theoretical detail The phenomenon that is the main focus of the argument suppletion in adjectival gradation is rare enough that Bobaljik is able to present an essentially comprehensive description of the facts at the same time it is common enough to offer sufficient variation to explore the question of universals over a significant dataset of more than three hundred languages Annual Review of South Asian Languages and Linguistics Rajendra Singh, 2009-12-15

South Asia is home to a large number of languages and dialects Although linguists working on this region have made significant contributions to our understanding of language society and language in society on a global scale there is as yet no recognized international forum for the exchange of ideas amongst linguists working on South Asia The Annual Review of South Asian Languages and Linguistics is designed to be just that forum It brings together empirical and theoretical research and serves as a testing ground for the articulation of new ideas and approaches which may be grounded in a study of South Asian languages but which have universal applicability Each volume will have three major sections I Invited contributions consisting of state of the art essays on research in South Asian languages II Refereed open submissions focusing on relevant issues and providing various viewpoints III Reports from around the world book reviews and abstracts of doctoral theses

Differential Subject Marking Helen de Hoop, Peter de Swart, 2007-12-04 Although almost all sentences have subjects not all sentences encode their subjects in the same way Some languages overtly mark some subjects but not others depending on certain features of the subject argument or the sentence in which the subject figures This phenomenon is known as Differential Subject Marking DSM Languages differ in which conditions govern DSM Some languages differentiate their subjects on the basis of semantic features of the argument such as thematic role volitionality animacy whereas others differentiate on the basis of clausal features such as tense aspect and the main dependent clause distinction DSM comes in different formal guises case marking agreement inverse systems and voice alternations Relatively much is known about cross linguistic variation in the marking of subjects yet little attempt has been made to formalize the facts This volume aims to unify formal approaches to language and presents both specific case studies of DSM and theoretical approaches
