Fast Algorithms For 3d Graphics Book And Disk:

Fast Algorithms for 3D-Graphics Georg Glaeser, 2013-12-10 In this book a variety of algorithms are described that may be of interest to everyone who writes software for 3D graphics It is a book that has been written for programmers at an intermediate level as well as for experienced software engineers who simply want to have some particular functions at their disposal without having to think too much about details like special cases or optimization for speed The programming language we use is C and that has many advantages because it makes the code both portable and efficient Nevertheless it should be possible to adapt the ideas to other high level programming languages The reader should have a reasonable knowledge of C because sophisticated programs with economical storage household and fast sections cannot be written without the use of pointers You will find that in the long run it is just as easy to work with pointer variables as with multiple arrays As the title of the book implies we will not deal with algorithms that are very computation intensive such as ray tracing or the radiosity method Furthermore objects will always be closed or not closed polyhedra which consist of a certain number of polygons

Fractal Geometry and Computer Graphics Jose L. Encarnacao, Heinz-Otto Peitgen, Georgios Sakas, Gabriele Englert, 2012-12-06 Fractal geometry has become popular in the last 15 years its applications can be found in technology science or even arts Fractal methods and formalism are seen today as a general abstract but nevertheless practical instrument for the description of nature in a wide sense But it was Computer Graphics which made possible the increasing popularity of fractals several years ago and long after their mathematical formulation The two disciplines are tightly linked The book contains the scientific contributions presented in an international workshop in the Computer Graphics Center in Darmstadt Germany The target of the workshop was to present the wide spectrum of interrelationships and interactions between Fractal Geometry and Computer Graphics The topics vary from fundamentals and new theoretical results to various applications and systems development All contributions are original unpublished papers The presentations have been discussed in two working groups the discussion results together with actual trends and topics of future research are reported in the last section The topics of the book are divided into four sections Fundamentals Computer Graphics and Optical Simulation Simulation of Natural Phenomena Image Processing and Image Analysis
