Fast Track to MDX Mark Whitehorn, Robert Zare, Mosha Pasumansky, 2007-12-29 IloveBusinessIntelligence
IloveBIbecauseitisallaboutbecomingbetter BI is all about empowering us with knowledge and that knowledge is the power to realize our full potential As Zorge the spy said knowledge is power and who doesn't love to have the power to know to understand and to make intelligent decision I do Since the dawn of the modern information system it was obvious that the information accumulated in the machine is wasted if there is no way to analyze it and learn from it From as early as the 1950s data analysis systems and later decision support systems were designed developed and deployed with that intent However only in the last decade have these systems become both reasonably affordable and mainstream and their business impact indisputable The last decade has also seen the emergence of OLAP as the centerpiece of the BI technologies The OLAP multidimensional databases combine incredible performance with unsurpassed analytical power and in my opinion are the foundation of the BI platform While the performance differences between the multidimensional databases and the traditional relational databases are very significant Moore's law which states that the hardware computing power doubles every 18 months renders this advantage of the OLAP databases temporary Sooner or later the raw computing power of the common server machines will be sufficient to provide the performance needed for sophisticated analysis even when the data is stored in a relational database *Pro SQL Server 2008 Analysis Services* Philo Janus, Guy Fouché, 2010-08-03 Every business has reams of business data locked away in databases business systems and spreadsheets While you may be able to build some reports by pulling a few of these repositories together actually performing any kind of analysis on the data that runs your business can range from problematic to impossible *Pro SQL Server 2008 Analysis Services* will show you how to pull that data together and present it for reporting and analysis in a way that makes the data accessible to business users instead of needing to rely on the IT department every time someone needs a different report Accessible With a single author's voice this book conducts a guided tour through the technology that makes it easy to dive into Solution oriented While technically deep the goal is to focus on practical application of the technologies instead of acting as a technical manual Comprehensive This book covers every aspect of analysis services and ancillary technologies to enable you to make the most of SQL Server *Expert Cube Development with SSAS Multidimensional Models* Chris Webb, Alberto Ferrari, Marco Russo, 2014-02-24 An easy to follow guide full of hands on examples of real world Analysis Services cube development tasks Each topic is explained and placed in context and for the more inquisitive reader there also more in depth details of the concepts used If you are an Analysis Services cube designer wishing to learn more advanced topic and best practices for cube design this book is for you You are expected to have some prior experience with Analysis Services cube development
The Microsoft Data Warehouse Toolkit Joy Mundy, Warren Thornthwaite, 2007-12-10 This groundbreaking book is the first in the Kimball Toolkit series to be product specific Microsoft's BI toolset has undergone significant changes in the SQL

Server 2005 development cycle SQL Server 2005 is the first viable full functioned data warehouse and business intelligence platform to be offered at a price that will make data warehousing and business intelligence available to a broad set of organizations This book is meant to offer practical techniques to guide those organizations through the myriad of challenges to true success as measured by contribution to business value Building a data warehousing and business intelligence system is a complex business and engineering effort While there are significant technical challenges to overcome in successfully deploying a data warehouse the authors find that the most common reason for data warehouse project failure is insufficient focus on the business users and business problems In an effort to help people gain success this book takes the proven Business Dimensional Lifecycle approach first described in best selling The Data Warehouse Lifecycle Toolkit and applies it to the Microsoft SQL Server 2005 tool set Beginning with a thorough description of how to gather business requirements the book then works through the details of creating the target dimensional model setting up the data warehouse infrastructure creating the relational atomic database creating the analysis services databases designing and building the standard report set implementing security dealing with metadata managing ongoing maintenance and growing the DW BI system All of these steps tie back to the business requirements Each chapter describes the practical steps in the context of the SQL Server 2005 platform

Intended Audience The target audience for this book is the IT department or service provider consultant who is Planning a small to mid range data warehouse project Evaluating or planning to use Microsoft technologies as the primary or exclusive data warehouse server technology Familiar with the general concepts of data warehousing and business intelligence The book will be directed primarily at the project leader and the warehouse developers although everyone involved with a data warehouse project will find the book useful Some of the book s content will be more technical than the typical project leader will need other chapters and sections will focus on business issues that are interesting to a database administrator or programmer as guiding information The book is focused on the mass market where the volume of data in a single application or data mart is less than 500 GB of raw data While the book does discuss issues around handling larger warehouses in the Microsoft environment it is not exclusively or even primarily concerned with the unusual challenges of extremely large datasets

About the Authors JOY MUNDY has focused on data warehousing and business intelligence since the early 1990s specializing in business requirements analysis dimensional modeling and business intelligence systems architecture Joy co founded InfoDynamics LLC a data warehouse consulting firm then joined Microsoft WebTV to develop closed loop analytic applications and a packaged data warehouse Before returning to consulting with the Kimball Group in 2004 Joy worked in Microsoft SQL Server product development managing a team that developed the best practices for building business intelligence systems on the Microsoft platform Joy began her career as a business analyst in banking and finance She graduated from Tufts University with a BA in Economics and from Stanford with an MS in Engineering Economic Systems
