Mouse in Immunology Michael Potter,Joseph H. Nadeau,Michael P. Cancro,2012-12-06 The present volume of *Current Topics in Microbiology and Immunology* is a series of papers on subjects that are relevant to the growing use of wild mice in immunological microbiological and genetical research Wild mice is a jargonistic term that is used chiefly in the laboratory to

refer to the naturally living forms of house mice *Mus musculus* and also other species closely related to *M. musculus*. This group of species is designated by systematists as the genus *Mus*. Immunologists began 20 years ago to study the polymorphisms of immunoglobulins and major histocompatibility complex antigens in wild mice. An extraordinary extension of the highly polymorphic array of phenotypes known in inbred mice was encountered. Breeding stocks of wild mice were brought into the laboratory. This included not only *M. musculus* but also many of the available species in the genus *Mus* from Southeast Asia and Europe. This availability led to other comparisons of wild and inbred mice and the discovery of other new and interesting phenotypes and genotypes. It became apparent that inbred strains of mice provided only a limited window for viewing the genetic diversity of *Mus musculus*.
