Uncover the Secrets of the Universe Hidden at Wavelengths beyond Our Optical Gaze William Herschel's discovery of infrared light in 1800 led to the development of astronomy at wavelengths other than the optical Infrared Astronomy Seeing the Heat from William Herschel to the Herschel Space Observatory explores the work in astronomy that relies on observations in the infrared Author David L Clements a distinguished academic and science fiction writer delves into how the universe works from the planets in our own Solar System to the universe as a whole The book first presents the major telescopes in the world of observational infrared astronomy explains how infrared light is detected through various kinds of telescopes and describes practical problems that send infrared astronomers to the tops of mountains and their telescopes into orbit and beyond Much of the book focuses on what infrared astronomers find in their observations You ll discover what infrared astronomy reveals about the planets moons and other bodies that constitute our Solar System star formation and stellar evolution the processes that shape galaxies and dark energy and dark matter Infrared astronomy has revolutionized our understanding of the universe and has become essential in studying cosmology Accessible to amateur astronomers this book presents an overview of the science and technology associated with infrared astronomy With color figures it shows you how infrared astronomy provides insights into the workings of the universe that are unavailable at other wavelengths **Scientific and Technical Aerospace Reports** , 1995 **Science Opportunities Enabled by NASA's Constellation System** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Science Opportunities Enabled by NASA's Constellation System, 2008-05-08

To begin implementation of the Vision for Space Exploration recently renamed United States Space Exploration Policy NASA has begun development of new launch vehicles and a human carrying spacecraft that are collectively called the Constellation System In November 2007 NASA asked the NRC to evaluate the potential for the Constellation System to enable new space science opportunities For this interim report 11 existing Vision Mission studies of advanced space science mission concepts inspired by earlier NASA forward looking studies were evaluated The focus was to assess the concepts and group them into two categories more deserving or less deserving of future study This report presents a description of the Constellation System and its opportunities for enabling new space science opportunities and a systematic analysis of the 11 Vision Mission studies For the final report the NRC issued a request for information to the relevant communities to obtain ideas for other mission concepts that will be assessed by the study committee and several issues addressed only briefly in the interim report will be explored more fully **Far Infrared Astronomy by Balloon and Satellite** N.
