*Host Guest Complex Chemistry Macrocycles* F. Vögtle, E. Weber, 2012-12-06 The scientific and practical interest in coronands crown ethers cryptands podands as complexing agents for cations as well as for anions and neutral low molecular species is undeniable 1 2 The chemistry of crown compounds is steadily increasing About 250 original papers dealing with crown chemistry appeared only in 1980 New molecules with crown ether properties are constantly synthesized and new applications discovered Owing to lack of space only a small number of the original publications is mentioned here Thus in the literature compilation only some but relevant works are selected for each chapter Whenever possible reference is made to reviews or review like articles alone by means of which original works can be consulted The reviews given under ref 1 are considered to be the most relevant The formulae presented in the figures should be understood as representative structures outlining a specific field 2 Classification of Oligo Multidentate Neutral Ligands and of their Complexes Today a distinction is made between the classical ring oligoethers crown ethers and monocyclic coronands oligocyclic spherical cryptands and the acyclic podands with respect to topological aspects 3 This classification and the topology are illustrated in Fig 1 each figure representing the minimum number of donor atoms and chain segments characteristic of each class of compounds Multidentate monocyclic ligands with any type of donor atoms are called coronands crown compounds while the term crown ether should be reserved for cyclic oligoethers exclusively containing oxygen as donor atom Cation Binding by Macrocycles Inoue, 2018-10-03 This reference details the theory and application of cation complexation including the design and synthesis of various cyclic systems these materials use as transport systems in complexation and selectivity studies by macrocyclic systems and methodologies for understanding these phenomena In a **Cyclophanes** Francois N Diederich, 2016-11-08 Cyclophanes are bridged aromatic compounds and represent the central class of synthetic receptors in molecular recognition All types of substrates from inorganic and organic cations and anions to neutral molecules have been complexed by tailor made cyclophanes This monograph focuses on the principles of supramolecular complexation and catalysis It provides a state of the art review of the intermolecular forces that hold together the supramolecular complexes of cyclophanes with neutral and charged organic molecules in the liquid phase Cyclophanes also demonstrates the characteristics and advantages of bridged aromatic compounds as receptors The book has great clarity is very readable and will be extremely useful in both teaching and research *NMR in Supramolecular Chemistry* M. Pons, 2012-12-06 NMR is better suited than any other experimental technique for the characterization of supramolecular systems in solution The presentations included here can be broadly divided into three classes The first class illustrates the state of the art in the design of supramolecular systems and includes examples of different classes of supramolecular complexes catenanes rotaxanes hydrogen bonded rosettes tubes capsules dendrimers and metal containing hosts The second class comprises contributions to NMR methods that can be applied to address the main structural problems that arise in supramolecular

Allinger, 2009-09-17 This seminal series first edited by Ernest Eliel responsible for some of the major advances in stereochemistry and the winner of the ACS Priestley Medal in 1996 provides coverage of the major developments of the field of stereochemistry The scope of this series is broadly defined to encompass all fields of chemical and biological sciences that are founded on molecular and supramolecular interactions Insofar as chemical physical and biological properties are determined by molecular shape and structure the importance of stereochemistry is fundamental to and consequential for all natural sciences Topics in Stereochemistry serves as a multidisciplinary series that enriches all of chemistry Aimed at advanced students university professors and teachers as well as researchers in pharmaceutical agricultural biotechnological polymer materials and fine chemical industries Topics in Stereochemistry publishes definitive and scholarly reviews in stereochemistry and has long been recognized as the gold standard reference work in this field Covering the effect of chirality on all aspects of molecular interaction from the fundamental physical chemical properties of molecules and their molecular physics to the application of chirality in new areas such as its applications in materials science Topics in Stereochemistry explores a wide variety of properties both physical and chemical of isomers with a view to their applications in a number of disciplines from biochemistry to materials science **The Encapsulation Phenomenon** Yan Voloshin, Irina Belaya, Roland Krämer, 2016-04-27 This fundamental book presents the most comprehensive summary of the current state of the art in the chemistry of cage compounds It introduces different ways of how ions and molecules can be encapsulated by three dimensional caging ligands to form molecular and polymeric species covalent supramolecular and coordination capsules The authors introduce their classification reactivity and selected practical applications Because encapsulation can isolate caged ions and molecules from external factors the encapsulated species can exhibit unique physical and chemical properties The resulting specific reactivity and selectivity can open up a range of applications including chemical separation recognition chiral separation catalysis applications as sensors or probes as molecular or supramolecular devices or molecular carriers cargo A particularly strong emphasis in this book is on the summary and review of the synthesis of various types of cage compounds Readers will find over 850 literature references summarized and clearly represented in over 600 schemes and illustrations The book is structured by the types of caging ligands covalent supramolecular or coordination capsules The authors further arranged the chapters by ligand classes and types of encapsulated species neutral molecules anions or cations Readers will hence find an exhaustive reference resource and summary of the current state of research into encapsulated species nowadays almost a separated realm of modern chemistry *Molecular Recognition and Inclusion* A.W. Coleman, 2012-12-06 This volume contains the Proceedings of the Ninth International Symposium on Molecular Recognition and Inclusion ISMRI 9 which was held in Lyon France during 7 to 12 September 1996 The articles reflect the over 50 oral presentations and 140 posters which were presented at ISMRI 9

both in the range of topics and also in the layout of the volume which comprises five sections Plenary Invited Oral and Emerging Lectures and the four poster sessions Some words should be said about the Emerging lectures these were a means of allowing young scientists often doctoral students to present short 15 minute talks on their work and were one of the great scientific successes of ISMRI 9 I would again like to thank the presenters of these lectures for their contributions The scientific content of ISMRI 9 reflected the logo of the conference showing the symbiotic interactions between Chemistry Physics and Biology which contribute so strongly to the inter and pluridisciplinary nature of Supramolecular Science The topics ranged from Glycobiology through Membrane Systems through Synthetic Organic and Inorganic Chemistry to the construction of Complex Edifices in solution and the Solid State to arrive at the Physics of Molecular Interactions via the understanding of Water and Gas Clathrates Once more to all the speakers who use the breadth of the subjects thank you
