Extensions Of Logic Programming:

　　Extensions of Logic Programming Roy Dyckhoff,1994-05-20 The papers in this volume are extended versions of presentations at the fourth International Workshop on Extensions of Logic Programming held at the University of St Andrews March April 1993 Among the topics covered in the volume are defintional reflection and completion modules in lambda Prolog representation of logics as partial inductive definitions non procedural logic programming knowledge representation contradiction avoidance disjunctive databases strong negation linear logic programming proof theory and regular search spaces finite sets and constraint logic programming search space pruning and universal algebra and implementation on transputer networks 　　Extensions of Logic Programming Peter Schroeder-Heister,1991-02-12 This volume contains finalized versions of papers presented at an international workshop on extensions of logic programming held at the Seminar for Natural Language Systems at the University of T bingen in December 1989 Several recent extensions of definite Horn clause programming especially those with a proof theoretic background have much in common One common thread is a new emphasis on hypothetical reasoning which is typically inspired by Gentzen style sequent or natural deduction systems This is not only of theoretical significance but also bears upon computational issues It was one purpose of the workshop to bring some of these recent developments together The volume covers topics such as the languages Lambda Prolog N Prolog and GCLA the relationship between logic programming and functional programming and the relationship between extensions of logic programming and automated theorem proving It contains the results of the first conference concentrating on proof theoretic approaches to logic programming 　　**Extensions of Logic Programming** Lars-Henrik Eriksson,Lars Hallnäs,1992-05-20 This volume contains papers presented at the second international workshop on extensions of logic programming which was held at the Swedish Institute of Computer Science Stockhom January 27 29 1991 The 12 papers describe and discuss several approaches to extensions of logic programming languages such as PROLOG as well as connections between logic programming and functional programming theoretical foundations of extensions applications and programming methodologies The first workshop in this series was held in T bingen in 1989 and its proceedings areavailable as LNCS 475 The third workshop will be held in Bologna in 1992 　　**Extensions of Logic Programming** Evelina Lamma,Paola Mello,1993-02-12 This book contains papers which investigate how to extend logic programming toward the artificial intelligence and software engineering areas covering both theoretical and practical aspects Some papers investigate topics such as abductive reasoning and negation Some works discuss how to enhance the expressive power of logic programming by introducing constraints sets and integration with functional programming Other papers deal with the structuring of knowledge into modules taxonomies and objects withthe aim of extending logic programming toward software engineering applications A section is devoted to papers concentrating on proof theory and inspired by Gentzen style sequent or natural deduction systems Topics such as concurrency are considered to enhance the expressive power of logic languages

Finally some papers mainly concernimplementation techniques for some of these logic programming extensions

    Non-Monotonic Extensions of Logic Programming Louis M. Pereira,1995-06-20 This volume is based on papers presented during the ICLP 94 Workshop on Nonmonotonic Extensions of Logic Programming and on papers solicited afterwards from key researchers participating in the workshop In total 10 carefully refereed revised full research papers on semantics and computational aspects of logic programs are included Logic programs rely on a nonmonotonic operator often referred to as negation by failure or negation by default The nonmonoticity of this operator allows to apply results from the area of nonmonotonic theories to the investigation of logic programs and vice versa This volume is devoted to the interdependence of nonmonotonic formalisms and logic programming   **Non-Monotonic Extensions of Logic Programming** Jürgen Dix,Luis Moniz Pereira,Teodor C. Przymusinski,1997-04-09 This book constitutes the thoroughly refereed post workshop proceedings of the 6th International Workshop on Non Monotonic Extensions of Logic Programming NMELP 96 held in Bad Honnef Germany in September 1996 The nine full papers presented in the volume in revised version were carefully reviewed and selected from a total of 18 submissions the set of papers addresses theoretical applicational and implementational issues and reflects the current state of the art in the area of non monotonic extensions of logic programming An introductory survey by the volume editors entitled Prolegomena to Logic Programming for Non Monotonic Reasoning deserves special mentioning it contains a bibliography listing 136 entries   **Extensions of Logic Programming** Peter Schroeder-Heister,1991   *Non-Monotonic Extensions of Logic Programming* Louis M.
