Re-collection Richard Rinehart, Jon Ippolito, 2022-11-01 The first book on the philosophy and aesthetics of digital preservation examines the challenge posed by new media to our long term social memory How will our increasingly digital civilization persist beyond our lifetimes Audio and videotapes demagnetize CDs delaminate Internet art links to websites that no longer exist Amiga software doesn't run on iMacs In Re collection Richard Rinehart and Jon Ippolito argue that the vulnerability of new media art illustrates a larger crisis for social memory They describe a variable media approach to rescuing new media distributed across producers and consumers who can choose appropriate strategies for each endangered work New media art poses novel preservation and conservation dilemmas Given the ephemerality of their mediums software art installation art and interactive games may be heading to obsolescence and oblivion Rinehart and Ippolito both museum professionals examine the preservation of new media art from both practical and theoretical perspectives offering concrete examples that range from Nam June Paik to Danger Mouse They investigate three threats to twenty first century creativity technology because much new media art depends on rapidly changing software or hardware institutions which may rely on preservation methods developed for older mediums and law which complicates access with intellectual property constraints such as copyright and licensing Technology institutions and law however can be enlisted as allies rather than enemies of ephemeral artifacts and their preservation The variable media approach that Rinehart and Ippolito propose asks to what extent works to be preserved might be medium independent translatable into new mediums when their original formats are obsolete

Extinction and Phylogeny Michael J. Novacek, Quentin D. Wheeler, 1992 More than 99% of all life that has ever existed on this planet is extinct Moreover human acceleration of the extinction of species has created a crisis in biodiversity How can the history of past life be retrieved How does this history bear on our

understanding of the organization and evolution of present day species These questions are addressed in extinction and phylogeny *In the Dust of This Planet* Eugene Thacker, 2011-08-26 1 Amazon Best Seller in Philosophy Criticism The world is increasingly unthinkable a world of planetary disasters emerging pandemics and the looming threat of extinction In this book Eugene Thacker suggests that we look to the genre of horror as offering a way of thinking about the unthinkable world To confront this idea is to confront the limit of our ability to understand the world in which we live a central motif of the horror genre In the Dust of This Planet explores these relationships between philosophy and horror In Thacker's hands philosophy is not academic logic chopping instead it is the thought of the limit of all thought especially as it dovetails into occultism demonology and mysticism Likewise Thacker takes horror to mean something beyond the focus on gore and scare tactics but as the under appreciated genre of supernatural horror in fiction film comics and music This relationship between philosophy and horror does not mean the philosophy of horror if anything it means the reverse the horror of philosophy those moments when philosophical thinking enigmatically confronts the horizon of its own existence For Thacker the genre of supernatural horror is the key site in which this paradoxical thought of the unthinkable takes place The cover of *In the Dust of this Planet* can be seen in a New York gallery on a banner at the 2014 Climate Change march in New York and on Jay Z's back promoting *Run* The book influenced the writers of the US TV series *True Detective* and has been lambasted by ex Fox News broadcaster Glenn Beck in this podcast https://www.youtube.com/watch?v=2IW8OK4_1gQ **The Charles Darwin**

Burgman,2006-05-09 Quantitative methods are needed in conservation biology more than ever as an increasing number of threatened species find their way onto international and national red lists Objective evaluation of population decline and extinction probability are required for sound decision making Yet as our colleague Selina Heppell points out population viability analysis and other forms of formal risk assessment are underused in policy formation because of data uncertainty and a lack of standardized methodologies and unambiguous criteria i e rules of thumb Models used in conservation biology range from those that are purely heuristic to some that are highly predictive Model selection should be dependent on the questions being asked and the data that are available We need to develop a toolbox of quantitative methods that can help scientists and managers with a wide range of systems and that are subject to varying levels of data uncertainty and environmental variability The methods outlined in the following chapters represent many of the tools needed to fill that toolbox When used in conjunction with adaptive management they should provide information for improved monitoring risk assessment and evaluation of management alternatives The first two chapters describe the application of methods for detecting trends and extinctions from sighting data Presence absence data are used in general linear and additive models in Chapters 3 and 4 to predict the extinction proneness of birds and to build habitat models for plants **Genetic**
