personalities and journalists Photographs have been selected from among Africa's best wildlife photographers and the Foreword is provided by Prince William It is hoped this book will create awareness of the devastating loss of elephant lives in Africa and stem the tide of poaching and hunting that it will inspire the delegates to CITES to make informed decisions to ensure that all loopholes in the ivory trade are closed and that countries receiving and using ivory both legal and poached primarily China Vietnam Laos and Japan ban and strenuously police its trade and use within their borders actively pursuing and arresting syndicate leaders driving the cruel poaching tsunami This book is also a tribute to the many people who work for the welfare of elephants particularly those who risk their lives for wildlife each day often for little or no pay in particular the field rangers and the anti poaching teams and to the many communities around Africa that have elected to work with elephants and not against them The Last Elephants is the title prophetic We hope not but the signs are worrying **African Elephant Database 1998** R. Afrotropical Forest Mammals Rafael Reyna-Hurtado, Colin A. Chapman, Mario Melletti, 2023-04-24 This book brings a unique perspective to animal movement studies because all studies come from African tropical environments where the great diversity either biological and structurally trees shrubs vines epiphytes present the animals with several options to fulfil their basic needs These conditions have forced the evolution of unique movement patterns and ecological strategies The book follows on our previous book Movement Ecology of Neotropical Forest Mammals but focuses on tropical African forests Movement is an essential process in the life of all organisms Animals move because they are looking for primary needs such as food water cover mating and to avoid predators Understanding the causes and consequences of animal movement is not an easy task for behavioural ecologists Many animals are shy move in secretive ways and are very sensible to human presence therefore studying the movements of mammals in tropical environments presents logistical and methodological challenges However researchers have recently started to be solved these challenges and exciting new information is emerging In this book we are compiling a set of extraordinary studies where researchers have used new technology and the strongest methodological approaches to understand movement patterns in wild African forest mammals This second book should inspire early career researchers to investigate wild mammal s movements in some of the most amazing forest in the world African tropical forests
