Wehmeyer,2007-04-27 God s universe is so astonishing that we would be missing a great deal of life if we chose to ignore any part of His creation Most of us are aware of the many animals that live in the forest and roam the land A lot less of us are aware of God s animals that live beneath the sea It is with this in mind that I decided to share my undersea experience with all of God s children It is my hope that this book can be used by Christian parents to interact with their children in a way that will expose God s undersea world and at the same time teach some Christian values that will have enduring ramifications By asking the questions on each page we as parents can stimulate our children to think about God and Christ and His world We can communicate with our children and share some interesting life forms with them It has been said that a picture is worth a thousand words Each picture within this book is an authentic sea animal I took all of the pictures of these sea animals as they appeared in their natural environment Each picture represents an extended effort as a scuba diver and underwater photographer Each animal was handled with loving care and was not removed from its environment Look at each picture and use your imagination to stimulate your child s curiosity This book is intended to be used as a guide to stimulate your child s interest in His world and as a tool for you to listen to what your child has to say Please read it to your child and use the information provided with each picture to answer you child s questions As you read this book may you enjoy God s undersea world and remember you are loved by Him always and forever Count on Math Pamela Byrne Schiller,Lynne

scientists This book is essential reading Jennifer Ackerman bestselling author of *What an Owl Knows* In an age of rapid scientific discovery and technological advancement it s understandable that many feel uneasy about the future While we might have confidence in these new developments when we go to the hospital for a medical procedure fly in an airplane or take an elevator to the top floor of a building the motivations and lives of scientists themselves feel shrouded from public view There is a growing sense that scientists are not to be trusted that they may be guided by political or financial interests or beholden to governments or state institutions This growing mistrust of scientists is an urgent problem With the onset of climate change the imminent threats of pandemic or nuclear war and rapid acceleration in the fields of artificial intelligence and DNA sequencing innovations in science have the potential to change the world It s crucial that we not only gain a better understanding of science as a field but also reestablish trust with its practitioners The *Shape of Wonder* guides us through the fascinating lives and minds of scientists around the world and throughout time from a young theoretical physicist who works as a research assistant professor at the University of Washington and rock climbs in their free time to German physicist Werner Heisenberg in his early life when he was a student of music and philosophy to Govind Swarup an Indian astronomer whose work on radio telescopes was profoundly important We get an inside peek at what makes scientists tick their daily lives passions and concerns about the societies they live in In this brilliant and elucidative work Lightman and Rees pull back the curtain on the field of science revealing that scientists are driven by the same sense of curiosity wonder and responsibility towards the future that shapes us all
