Extinct Birds And Those In Danger Of Extinction:

Extinct Birds, and Those in Danger of Extinction Philip Steele, 1991 Features unusual extinct and endangered birds

The Cumulative Book Index, 1992 A world list of books in the English language Birds in Jeopardy Paul R.

Ehrlich, David S. Dobkin, Darryl Wheye, 1992-03-01 As the human population skyrockets and the toxic impact of human society spreads the natural habitats of birds degrade and diminish and the bird populations decline Two hundred years ago when the United States and Canada were home to less than 5 million people they were also home to some 650 species of birds Today more than 280 million people live there and 33 bird species have already been driven to extinction and well over 150 are in danger of extinction in all Or parts of their range This book organized and written by the authors of *The Birder's Handbook* and enriched by 191 strikingly beautiful color paintings illustrating all of the birds treated is the first concise authoritative review of the status of the birds currently imperiled in the United States and Canada those that are federally listed as Endangered or Threatened and those that are listed by the National Audubon Society as suffering local or regional or Widespread decline It also treats the birds that have been driven to extinction in the past two centuries since the stories of their somber fates can help us learn how to save the other birds that are in jeopardy Because birdwatchers and others are showing increased interest in the tropical birds that survive in Hawaii and Puerto Rico the book includes separate sections on the imperiled and extinct birds of those areas Hawaii is of special importance because it has Seen so many extinctions just in the years since Cook's arrival 23 species and subspecies it provides a laboratory for studying the impact of civilization on birds in the wild The individual texts written in clear non technical language cover requirements for successful nesting and feeding worldwide and North American breeding range wintering range and imperiled portions of range current population estimates for Threatened and Endangered birds behavioral And other factors pertinent to conservation former and or current threats associated with decline current status of imperilment federally funded recovery plans and the date of last sighting in those desperate cases where extinction is imminent or already a fact In the last century coal miners took canaries into the mines reasoning that if poisonous gases were present the birds would give warning by succumbing first Now birds are serving as miners canaries once Again In the language of ecology they are good indicator species warning us that too many people unbridled consumption of wildlands and other natural resources faulty technologies and irresponsible disposal of chemical and other wastes threaten not just birds but ourselves and every other living thing In our daily lives we seldom see the terrible effects of these forces but they are demonstrated every day by scientific surveys of the environment around the world **Nextinction** Ralph Steadman, Ceri Levy, 2015-08-16 The Boids are back in town The follow up to the award winning EXTINCT BOIDS this book features more of the incredible art of cartoonist Ralph Steadman This time the focus is not on the birds that are gone but the ones that there's still time to save These are the 192 Critically Endangered birds on the IUCN Red List species such as the Giant Ibis the Kakapo the Sumatran Ground cuckoo and the iconic Spoon billed Sandpiper

these along with a number of classic Steadman creations such as the Unsociable Lapwing are the NEARLY EXTINCT BOWDS
Woids are again by author conservationist and film maker Ceri Levy Together Ceri and Ralph are THE GONZO VATIONISTS

A comprehensive review of the hundreds of bird species that have become extinct over the last 1 000 years of habitat degradation over hunting and rat introduction Extinct Birds has become the standard text on this subject covering both familiar icons of extinction as well as more obscure birds some known from just one specimen or from travellers tales This second edition is expanded to include dozens of new species as more are constantly added to the list either through extinction or through new subfossil discoveries The book is the result of decades of research into literature and museum drawers as well as caves and subfossil deposits which often reveal birds long gone that disappeared without ever being recorded by scientists while they lived From Great Auks Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere this book is both a sumptuous reference and astounding testament to humanity s devastating impact on wildlife **Water for the Future** U.S. National Academy of Sciences, Royal Scientific Society, Jordan, Palestine Academy for Science and Technology, Israel Academy of Sciences and Humanities, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Sustainable Water Supplies in the Middle East, 1999-02-09 This book is the result of a joint research effort led by the U S National Academy of Sciences and involving the Royal Scientific Society of Jordan the Israel Academy of Sciences and Humanities and the Palestine Health Council It discusses opportunities for enhancement of water supplies and avoidance of overexploitation of water resources in the Middle East Based on the concept that ecosystem goods and services are essential to maintaining water quality and quantity the book emphasizes conservation improved use of current technologies and water management approaches that are compatible with environmental quality Extinctions Charles Frankel, 2024-05-29 A distinguished geologist and a popular science writer Charles Frankel turns his attention in his latest book to the mass extinctions on our planet considering what the past can tell us about the future Explaining Earth s past mass extinctions Frankel suggests that each time a decrease in biodiversity created fragile conditions that eventuated into widespread and cataclysmic disappearances The rise of mammals led to the rise of humans who over the past 200 000 years have become their own geological force forever affecting the bio environment from the massacre of megafauna in the Ice Age to the impoverishment of soils and pollution of waterways and air to the unwitting transfer of invasive species from one part of the globe to another

After a compelling account of the latest research Frankel ends with speculations on planetary peril and whether the widespread extinctions climate change and loss of biodiversity that we are currently experiencing can be slowed or even reversed His answer inspires hope and urgency If humans can redirect and curb some of our basic behaviors like the obsession to kill and consume other species we might stand a chance Still he eloquently explains that even if we succeed in this our way of life and even some of our ways of being human will be transformed forever As extinction repeatedly shows those who survive life is not eternal
