Extinct Birds Extinct Species Vol 5:

Extinct Birds Julian P. Hume, 2017-08-24 A comprehensive review of the hundreds of bird species that have become extinct over the last 1 000 years of habitat degradation over hunting and rat introduction Extinct Birds has become the standard text on this subject covering both familiar icons of extinction as well as more obscure birds some known from just one specimen or from travellers tales This second edition is expanded to include dozens of new species as more are constantly added to the list either through extinction or through new subfossil discoveries The book is the result of decades of research into literature and museum drawers as well as caves and subfossil deposits which often reveal birds long gone that disappeared without ever being recorded by scientists while they lived From Great Auks Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere this book is both a sumptuous reference and astounding testament to humanity s devastating impact on wildlife

Palaeobiology of Giant Flightless Birds Delphine Angst, Eric Buffetaut, 2017-11-16 The fossil record of giant flightless birds extends back to the Late Cretaceous more than 70 million years ago but our understanding of these extinct birds is still incomplete This is partly because the number of specimens available is sometimes limited but also because widely different approaches have been used to study them with sometimes contradictory results This book summarizes the current knowledge of the paleobiology of seven groups of giant flightless birds Dinornithiformes Aepyornithiformes Dromornithidae Phorusrhacidae Brontornithidae Gastornithidae and Gargantuavis

The first chapter presents the global diversity of these birds and reviews the tools and methods used to study their paleobiology Chapters 2 to 8 are each dedicated to one of the seven groups of extinct birds Finally a conclusion offers a global synthesis of the information presented in the book in an attempt to define a common evolutionary model Focuses on the giant flightless birds that evolved independently in different parts of the world since the Cretaceous period Covers a number of different families with different evolutionary histories providing a source of interesting comparisons Provides emphasis on the palaeobiology of these birds including their evolution adaptations mode of life ecology and extinction
