Extragalactic Radio Sources From Beams To Jets:

Extragalactic Radio Sources Jacques Roland, Hélène Sol, Guy Pelletier, 1992-06-26 The physics of active galactic nuclei the origin of extragalactic jets and the formation of extended extragalactic radio sources are among the most interesting challenges of modern astrophysics This book contains the proceedings of the 7th meeting of the Institut d'Astrophysique de Paris which drew together both theorists and observers in this exciting field Recent observational data at X ray optical and radio wavelengths is discussed and new theoretical developments concerning beam and jet formation models are considered Special treatment is given to plasma physics problems related to particle acceleration magnetic reconnection beam plasma interaction and coherent emission The volume will be of use to all students and researchers who are working in this field

Extragalactic Radio Sources D.S. Heesch, C.M. Wade, 2012-12-06 IAU Symposium 97 Extragalactic Radio Sources was held at Albuquerque New Mexico August 3-7 1981 It was co sponsored by IAU Commissions 28 40 47 and 48 and by URSI Commission J Financial and organizational support were provided by the National Radio Astronomy Observatory the University of New Mexico and the National Science Foundation A wide variety of interesting objects and phenomena can be covered under the heading Extragalactic Radio Sources and a diverse set of topics was in fact discussed at the symposium Radio galaxies quasars Seyfert galaxies and BL Lacertids received the most attention but normal galaxies the galactic center and even SS433 were also discussed While the unifying theme of the symposium was radio emission studies at all wavelengths X ray UV optical IR and radio were included In general the emphasis was on individual objects and the physical processes associated with them but there were also papers on statistical studies and cosmology The symposium was attended by 209 scientists from 18 countries

Parsec-Scale Radio Jets J. Anton Zensus, Timothy J. Pearson, 1990-08-16 Quasars and active galaxies are the most powerful emitters of radiation in the universe Modern radio telescope arrays have shown that the ultimate energy source resides in the central few parsecs of the galactic nucleus and powers the emitting regions by way of two oppositely directed relativistic jets of energy This volume presents the latest observations and theories of these remarkable objects Topics discussed include superluminal motions the physics of jets and shock fronts in jets related optical observations and cosmic evolution Particular attention is given to the unified theories which attempt to show that many of the phenomena in powerful extragalactic objects are different aspects of a single basic mechanism the main difference in their appearance is a result of their different orientation with respect to the observer

Astrophysical Jets and Beams Michael D. Smith, 2012-02-16 An up to date study of astrophysical jets that will appeal to students and researchers in all areas of astrophysics

Galactic and Extragalactic Radio Astronomy E. Bouton, Gerrit L. Verschuur, Kenneth I. Kellermann, 2012-12-06 Galactic and Extragalactic Radio Astronomy is a fundamental text for graduate students and professional astronomers and covers all aspects of radio astronomy beyond the solar system Each chapter is written by a renowned expert in the field and contains a review of a particular area of radio astronomy and presents the latest

observations and interpretations as well as an extensive view of the literature as of 1988 Topics covered include galactic continuum emission HII regions the diffuse interstellar medium interstellar molecules astronomical masers neutral hydrogen the galactic center radio stars supernova remnants pulsars extragalactic hydrogen radio galaxies and quasars the microwave background and cosmological radio sources **Literature 1992, Part 1** Astronomisches Recheninstitut,2013-11-11

Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world *Stellar Jets and Bipolar Outflows* L. Errico,Alberto A. Vittone,2012-12-06 In the last few years great

improvements in the study of stellar jets and bipolar outflows have been achieved both observationally and theoretically High resolution observations at various frequencies radio IR optical and X ray of these features in different types of objects have shown a large variety of morphologies at all scales often revealing contrasting symmetries which do not allow straightforward kinematic interpretations valid for all cases In particular at present it seems very difficult to give a statistical definition of what the standard properties of jets and bipolar outflows are On the theoretical side the identification of physical processes capable of producing the observed rich morphological variety of jets and bipolar outflows and supporting them over long lifetimes is still controversial Furthermore several models are actively discussed in an attempt of reaching a complete understanding of the phenomenon The workshop provided an unique opportunity for both observers and theoreticians to gather together and produce an updated and exhaustive picture of the field In addition the meeting has been enriched by the presentation of some works on jets in external galaxies This topic was focused on what people working on stellar jets could learn from colleagues working on extragalactic jets and vice versa Invited papers were prepared with the aim of giving the state of the art about scientific subjects contributed papers and some selected poster papers presented on the contrary very recent results in the various fields **The Nature of Compact Objects in Active Galactic Nuclei**

Andrew Robinson,Roberto Juan Terlevich,1994-03-03 What evidence is there for and against unified schemes for active galactic nuclei AGN How do the AGN populations evolve over cosmological timescales And what can the variability of their UV and X ray emission tell us These are just some of the exciting issues addressed in this volume of papers collected from the 33rd Herstmonceux conference in Cambridge AGN are among the most spectacular objects known to astronomy Yet despite years of intense and wide ranging research the debate continues what is their fundamental source of power Rapid progress has been made towards answering this question by a variety of large scale multi wavelength monitoring campaigns and the latest generation of satellite borne observations This volume provides a valuable overview and timely update of the exciting

and rapidly developing field of AGN research essential reading for graduate students and researchers

Cosmic Velocity Fields François R. Bouchet, Marc Lachièze-Rey, 1993

Beams and Jets in Astrophysics Philip A. Hughes, 1991-01-25 This book is the first to provide students and researchers in the field of astrophysical jets with a comprehensive and up to date account of current research An important feature of the book is that it combines discussions of both extragalactic and Galactic jets There are ten chapters authored by fourteen active researchers each of whom is an expert on their chosen topic and the book has been edited to provide a cohesive account of this field of study This is the first volume to integrate studies of jets on all length scales It will be an important textbook for graduate students and a valuable reference source for researchers in many areas of extragalactic and Galactic astronomy It will also be of interest to plasma physicists and space scientists

Astronomy and Astrophysics Abstracts S. Böhme, W. Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G. Zech, 2013-12-14 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 31 contains literature published in 1982 and received before July 15 1982 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English

Cosmic Plasmas and Electromagnetic Phenomena Athina Meli, Yosuke Mizuno, Jose L. Gómez, 2019-10-25 During the past few decades plasma science has witnessed a great growth in laboratory studies in simulations and in space Plasma is the most common phase of ordinary matter in the universe It is a state in which ionized matter even as low as 1% becomes highly electrically conductive As such long range electric and magnetic fields dominate its behavior Cosmic plasmas are mostly associated with stars supernovae pulsars and neutron stars quasars and active galaxies at the vicinities of black holes i e their jets and accretion disks Cosmic plasma phenomena can be studied with different methods such as laboratory experiments astrophysical observations and theoretical computational approaches i e MHD particle in cell simulations etc They exhibit a multitude of complex magnetohydrodynamic behaviors acceleration radiation turbulence and various instability phenomena This Special Issue addresses the growing need of the plasma science principles in astrophysics and presents our current understanding of the physics of astrophysical plasmas

their electromagnetic behaviors and properties e.g. shocks, waves, turbulence, instabilities, collimation, acceleration and radiation both microscopically and macroscopically. This Special Issue provides a series of state-of-the-art reviews from international experts in the field of cosmic plasmas and electromagnetic phenomena using theoretical approaches, astrophysical observations, laboratory experiments and state-of-the-art simulation studies. *Scientific and Technical Aerospace Reports*, 1992. *Cygnus A - Study of a Radio Galaxy* C. L. Carilli, Daniel E. Harris, 1996-02-29. A comprehensive and up-to-date review of Cygnus A and what it can teach us about other active galaxies for graduate students and researchers. **Physics of Active Galactic Nuclei at all Scales** Danielle Alloin, Rachel Johnson, Paulina Lira, 2006-09-07. This book contains a collection of lecture notes written by recognized experts in the field of Active Galactic Nuclei (AGN). The collection is aimed at providing both an introduction and at the same time an overview of the state-of-the-art of AGN research. This book also addresses the still not entirely understood link of an AGN with its host galaxy and also the related question of the birth and growth of massive black holes in the Universe. **Computational Methods for Astrophysical Fluid Flow** Randall J. LeVeque, Dimitri Mihalas, E.A. Dorfi, Ewald Müller, 2006-04-18. This book leads directly to the most modern numerical techniques for compressible fluid flow with special consideration given to astrophysical applications. Emphasis is put on high-resolution shock capturing finite volume schemes based on Riemann solvers. The applications of such schemes in particular the PPM method are given and include large-scale simulations of supernova explosions by core collapse and thermonuclear burning and astrophysical jets. Parts two and three treat radiation hydrodynamics. The power of adaptive moving grids is demonstrated with a number of stellar physical simulations showing very crispy shock front structures. **Literature 1985, Part 1** S. Böhme, U. Esser, Prof. Dr. W. Fricke, H. Hefele, Inge Heinrich, W. Hofmann, R. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-12-11. *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 39 records literature published in 1985 and received before August 15, 1985. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications. On account of the introduction of an object index, the scope of index information will be considerably enlarged beginning with this volume. In connection with the subject index, an additional source to satisfy the needs of retrieval is opened up. Starting with Volume 33, all the recording, correction and data processing work was done by means of computers. The recording was done by our technical staff members Ms Helga Ballmann, Ms Mona El Choura, Ms Monika Kohl, Ms Sylvia Matyssek, Ms Karin Burkhardt, Ms Susanne Schlotelburg and
