Abstract

Does cognitive inflexibility predict vulnerability to violent extremism? Schumann, Salman, Clemmow, and Gill (2021) conducted a registered direct replication of Zmigrod, Rentfrow, and Robbins' (2019, *Frontiers in Psychology*, 10, 989) studies on the relationship between neuropsychologically assessed cognitive inflexibility and extremist attitudes. Replicating the original study, Schumann et al. (2021) demonstrated that cognitive inflexibility on the Remote Associates Test was related to individuals' willingness to fight and die for their ideological group (Bayes Factor = 58.7). In a further corroboration, the study found that individuals who indicated they would self-sacrifice in a trolley-dilemma paradigm were more psychologically rigid on the Remote Associates Test than those who opted for self-preservation (Bayes Factor = 402.3). A mini meta-analysis with the original study revealed a significant negative correlation between cognitive flexibility and violent extremist behaviour intentions, thereby supporting the conclusions of the original study by Zmigrod and colleagues (2019). Nevertheless, the replication study highlighted moderators of the effect sizes of the reported relationships and revealed subtleties in the theoretical relationships between cognitive style and tendencies towards extremist attitudes. Follow-up analyses with Bayesian statistics demonstrated that—corroborating the original study—cognitive inflexibility on both the Remote Associates Test (Bayes Factor = 7.2)

Extremism and Cognition Walter B. Mead, 1971 Evidence-Based Work with Violent Extremists Massil Benbouriche, Martine Evans, 2019-07-15 Using France as a case study contributors from around the world explore the factors that create violent extremists including criminogenic needs violence supportive cognition religious beliefs identity uncertainty or fusion the quest for significance and social and political influences They present a multidisciplinary and evidenced based analysis of how and why violent extremism has reappeared as a contemporary issue and provide theoretical and practical approaches to responding to and when possible intervening using deradicalization programs deterrent and preventive legislations prison segregation and permanent monitoring *Conceptualizing Extreme Beliefs and Behaviors* Rik Peels, John Horgan, 2025-08-05 Concepts like extremism and radicalization are highly contested Their definitions matter because they influence how we study extremism and radicalization and in the long run how these are perceived in the public debate Rather than adding more definitions this book explores the underlying challenging conceptual issues in defining interpreting and operationalizing notions such as extremism radicalization fanaticism and terrorism It explores four crucial questions First how should each of these extreme phenomena be defined and what are the desiderata in seeking definitions of each of them Second how should the project of defining and conceptualizing these phenomena be undertaken in terms of necessary and sufficient conditions or family resemblances or common understandings in the public debate or something else Third what is the role of normativity in defining these extreme phenomena that is the proper place of normative or even pejorative concepts and the normative framework of the researcher Fourth and finally how do the phenomena of extremism fanaticism fundamentalism terrorism and conspiracism relate to one another and to things such as apocalypticism nationalism cults charisma and state terror Written by global multidisciplinary experts this text lays the conceptual groundwork that the other volumes in the Extreme Belief and Behavior Series will build on **Unravelling Radicalisation** Gilbert McLaughlin, Antoinette Raffaella Huber, 2025-08-11 The term radicalisation is being used by politicians activist groups the media governmental organisations and many other groups although it lacks conceptual clarity and insufficient consideration is given to its historical context This edited book offers a reflective overview of the state of the research by addressing questions such as what is radicalisation and does the concept help us to understand political violence differently across the social sciences From a global selection of scholars it explores the definition and the utilisation of the concept of radicalisation pathway modelling and the impact of gender religion and ideologies on radicalisation It combines theoretical and historical analysis providing a good introduction for any scholar and student starting in that field Affects, Cognition, and Language as Foundations of Human Development Paul C. Holinger, 2024-10-04 *Affects Cognition and Language as Foundations of Human Development* considers human development from the three most basic systems affects our earliest feelings cognition and language Holinger explores how these systems enhance potential and help prevent problems both in

individuals and in societies He begins with a focus on the affects of interest and anger and how affects provide the foundation for the sense of self and playing and creating The author delves into cognition in the context of human relationships and infants remarkable capacity to understand language long before they can talk Drawing on the work of Darwin Freud Stern Basch and the ground breaking ideas of Silvan Tomkins this work thus deepens the exploration into human development by integrating affects cognition and language The author also uses this triad to examine two important societal issues physical punishment and bias prejudice and violence This book will not only appeal to psychologists psychoanalysts psychiatrists and social workers but is also accessible to parents educators and policymakers Handbook of Understanding Terrorism

Martine Herzog-Evans, Stephen J. Motivation, and Interaction: How Do People Respond to Threats in Social Interactions? Eva Jonas, Christina Mühlberger, 2018-01-12 If we want to understand people s responses to threats in social interactions we can distinguish between three levels of analysis On a social level of analysis we can describe people s interpersonal behavior on a cognitive level we can identify corresponding information processing mechanisms and on a neural level we can specify neural systems which underlie these processes In this Research Topic we want to present research connecting these three levels of analysis and propose their functional interconnection in social interaction We propose that threats in social interactions activate basic motivational processes which manifest in neural processes related to behavioral inhibition vs activation in a social situation This shapes our attention to new information and affects our cognitions about social identities belief systems and worldviews These changes in social cognition in turn affect people s behavior in social interactions and lead to corresponding reactions on behalf of the interaction partner Thus we assume that people s reactions to threat in interactions can be described as sequences of broader attentional processes resulting from basic motivational tendencies leading to specific social cognitions and subsequent behavior within social interactions We can analyze this sequence in order to contribute to a better understanding of social interactions The three levels of analyses social cognitive neural shed light on social interactions from different angles On the social level we can analyze how the behaviors of the interaction partners mutually affect each other and how this is accompanied by specific cognitive emotional and motivational processes On the cognitive level we can analyze people s perception of a social situation leading to attentional and reasoning processes with regard to their interaction partner s which may be accompanied by certain emotional and motivational processes and determines the

behavior towards the partner's. Finally we can focus on the neural mechanisms underlying cognitive emotional and motivational processes in social interactions.

Reflection and Intuition in a Crisis-Ridden World S. Adil Saribay, Onurcan Yilmaz, 2024-12-06 This book provides a definitive guide to the value of reflective thinking in the modern world showing how today's most fundamental problems are to an important degree based on citizens' thinking styles. The authors highlight the importance of reflection by systematically revealing the causes underlying differences in people's thinking styles and the consequences of thinking in different ways. These different ways of thinking contribute to socio-political views and can result in misunderstandings of complex issues such as beliefs in conspiracy theories and fake news, anti-vaccine attitudes and even fundamentalism and extremism. By training and strengthening reflective thinking in society via education and other means we can encourage individuals to challenge misinformation and their own belief systems around controversial topics. The book also explores the idea that reflection is not enough on its own and examines the shortcomings of reflection and the other skills that complement it positively especially holistic and systems thinking. In doing so the authors highlight how implementing a solid science based understanding of key issues in education and society at large can contribute to the solution of problems from climate change to economic inequality. By showing how we can put our reflective capacity to good use alongside critically examining reflection in relation to modern problems experienced by humanity this book is a fascinating reading for students, researchers and academics in psychology, politics and the broader social sciences.

The Motivation-Cognition Interface Catalina E. Kopetz, Ayelet Fishbach, 2017-09-11 This volume honors the work of Arie W. Kruglanski. It represents a collection of chapters written by Arie's former students, friends and collaborators. The chapters are rather diverse and cover a variety of topics from politics including international terrorism to health related issues such as addiction and self control to basic psychological principles such as motivation and self regulation, the formation of attitudes, social influence and interpersonal relationships. What these chapters have in common is that they have all been inspired by Arie's revolutionary work on human motivation and represent the authors' attempt to apply the basic principles of motivation to the understanding of diverse phenomena.

Proceedings of the 2020 Conference of The Computational Social Science Society of the Americas Zining Yang, Elizabeth von Briesen, 2022-01-04 This book is comprised of the latest research into CSS methods, uses and results as presented at the 2020 annual conference of the Computational Social Science Society of the Americas (CSSSA). Computational social science (CSS) is the science that investigates social and behavioral dynamics through social simulation, social network analysis and social media analysis. The CSSSA is a professional society that aims to advance the field of computational social science in all areas including basic and applied orientations by holding conferences and workshops promoting standards of scientific excellence in research and teaching and publishing research findings and results. The above mentioned conference was held virtually October 8-11, 2020. What follows is a diverse representation of new results and approaches to using the tools of CSS and agent based modeling (ABM) in exploring complex

phenomena across many different domains Readers will therefore not only have the results of these specific projects upon which to build along with a wealth of case study examples that can serve as meaningful exemplars for new research projects and activities they will also gain a greater appreciation for the broad scope of CSS

Neurocognitive Risk Assessment for the Early Detection of Violent Extremists Geoff Dean, 2014-06-10 This Brief provides a theoretical and conceptual development of a new Risk Assessment Toolbox RAT for the early detection of violent extremists It is based on a neurocognitive perspective conceptualized as neuroplasticity in action arising from brain based neural patterns expressed in mind based cognitive pathways likely to form a mind set of violent extremism This neurocognitive based Risk Assessment Toolbox RAT is comprised of two distinct components a cognitive indicators instrument that serves as an early detection checklist for trained practitioners and a software visualisation program The Brief includes A framework of contemporary approaches to the risk assessment of violence as well as the background context for the current research project on violent extremism and its related concepts of terrorism and radicalisation out of which the RAT was developed A detailed overview of RAT and a pilot case study experiment to highlight the practical value and utility of this neurocognitive Risk Assessment Toolbox Preliminary research findings of a study conducted with a sample of recognized experts academics and practitioners in several countries around the world to fine tune and validate the risk parameters of the two components that constitute RAT Risk Assessment Toolbox The current stage of development of RAT as a practitioner based system for the early detection of potentially violent extremists as well as its strategic intelligence implications for using a neurocognitive risk assessment approach to violent extremism is discussed Research limitations and plans for future research studies This work will be of interest to researchers in Criminology and Criminal Justice interested in studying violent extremism terrorism and crime prevention and intervention and policing as well as researchers in related fields of Forensic Psychology Cognitive Neuroscience and Social Work or Social Intervention

Power of Emotions: On the Affective Constitution of Political Struggle Andreas Ventsel, Peeter Selg, 2025-07-11 The emergence

of political identities and communities in social media is largely driven by affective responses to current events a tendency facilitated by the dominance of emotionally and visually oriented communication However this mode of community formation leads first to the inherent instability and transience of these groups and second to the oversimplification of complex socio political issues into binary yes no alternatives Within this framework deliberation and argumentation based problem solving become increasingly difficult as discourse is supplanted by emotional reactions that position individuals either for or against an issue Particularly significant is the role of affect and emotion in communication during times of crisis whether in the context of migration the COVID 19 pandemic or the war in Ukraine This affective role is evident in the anchoring of public discourse to personal emotions and the generation and dissemination of hashtags and tags that consolidate diverse phenomena under a unified label Such collective identity coalesces around connective action which is primarily driven either by opposition to the established order or by the reinforcement of a preexisting system s foundations Consequently the emergence of these affective publics must be analyzed within the broader context of power dynamics and evolving forms of identification in the contemporary media sphere forms rooted in shared practices of expression action and interpretation This edited volume will explore the manifestations of affective semiosis meaning making at the socio cultural and discursive levels Cultural context emotional reactions and affective semiosis play a crucial role in shaping how issues related to identity and security are articulated in both domestic and foreign policy as well as in the ways solutions to these challenges are sought By adapting the concept of affective semiosis for the analysis of discursive structures this volume offers an innovative and effective approach to identifying the triggers of emotional reactions in discourse and examining their impact on the construction of political identities fear scenarios misinformation campaigns polarization and other dynamics within networked societies The volume includes both theoretically oriented papers as well as analyses of empirical materials

Handbook of Racism, Xenophobia, and Populism Adebowale Akande, 2022-12-08 This handbook presents the roots of symbolic racism as partly in both anti black antagonism and non racial conservative attitudes and values representing a new form of racism independent of older racial and political attitudes By doing so it homes in on certain historical incidents and episodes and presents a cogent analysis of anti black Jim Crowism anti people of color Black Latino Native Americans and prejudice that exists in the United States and around the world as a central tenet of racism The book exposes the reader to the nature and practice of stereotyping negative bias social categorization modern forms of racism immigration law empowerment racialized incarceration and police brutality in the American heartland It states that several centuries of white Americans negative socializing culture marked by widespread negative attitudes toward African Americans are not eradicated and are still rife Further the book provides a panoramic view of trends of racial discrimination and other negative and desperate challenges that Black Indigenous and People of Color face across the world Finally the volume examines xenophobia racism prejudice and stereotyping in different contexts including topics such as Covid 19 religion and racism

information manipulation and populism The book therefore is a must read for students researchers and scholars of political science psychology history sociology communications media studies diplomatic studies and law in general as well as ethnic and racial studies American politics global affairs populism and discrimination in particular *Radicalization and Deradicalization: Processes and Contexts* David Winter, Kees van den Bos, John Morrison, 2022-11-18 *Perspectives on Spiritual Intelligence* Marius Dorobantu, Fraser Watts, 2024-07-29 The topic of intelligence involves questions that cut deep into ultimate concerns and human identity and the study of intelligence is an ideal ground for dialogue between science and religion This volume investigates the notion of spiritual intelligence from a variety of perspectives bringing together contributions from theology computer science linguistics psychology biology and cognitive science It defines spiritual intelligence as processing things differently not processing different things and aims to describe it in naturalistic terms Spiritual intelligence is not regarded as a separate mental module or a magical ability to interact with the supernatural but rather as a specific more spiritual way of engagement with reality which has observable cognitive phenomenal and linguistic characteristics The book is valuable reading for those working at the interface between science and spirituality

Anti-Semitism in America Harold Earl Quinley, Charles Young Glock, Periodic outbreaks of anti Jewish hostility testify to the continuing presence of anti Semitism in America Based on the most extensive research ever conducted on the subject Anti Semitism in America now in a new paperback edition provides us with the often surprising facts about the enduring form of bigotry and sheds new light on the nature of prejudice in general The authors draw their conclusions from a specially designed nationwide survey on anti Semitism conducted by the Survey Research Center at the University of California Berkeley and by other public opinion polls **Radicalization and Counter-Radicalization** Derek M.D. Silva, Mathieu Deflem, 2020-09-09 The fifteen chapters in this volume of *Sociology of Crime Law and Deviance* discuss a number of issues researchers in the fields of sociology criminology and criminal justice theorize conceptualize and measure racialization and counter radicalization *Revolutionary Emotions in Cold War Egypt* Christiane-Marie Abu Sarah, 2024-04-04 In autumn 1951 a diverse array of Muslim Christian and Jewish students from clubs like the Muslim Brotherhood and the Worker s Vanguard launched a guerrilla struggle against British occupation of the Suez Canal Zone *Revolutionary Emotions in Cold War Egypt* recovers this overshadowed revolution of 1951 and the part played by the Canal struggle in the overthrow of the Egyptian monarchy In a study spanning a half dozen international archives the book delves into the divisive court cases and rousing club newspapers intimate memoirs and personal poetry of Egyptian activists These documents reveal that in the early years of the Cold War morality tales and moral emotions were at the heart of the methods and the successes of Egyptian activists What stories did activists tell and how did the emotional appeals and moral talk of Islamist and communist clubs compare How did Arabic speaking populations negotiate moral norms and what role did emotions like love anger and disgust play in political campaigns Taking a journey through Islamic parables about perilous beaches communist adaptations

of Greek myths and popular stories about Juha's Nail and Paul Revere's Ride through the Suez Canal this book uncovers a rich history of activist storytelling These practices uncover the mechanics of morality tales and reveal how activists used narratives to convert emotion to motion and drive social change Still vitally important for readers today such findings shed light on how paramilitary groups and protest movements use moral appeals to attract support and why activist campaigns become the controversial epicentre of polarizing emotional battles Proceedings of the Workshop on Cognitive Social Sciences Ron Sun,
