Perception of Faces, Objects, and Scenes Mary A. Peterson,Gillian Rhodes,2003-05-22 From a barrage of photons we readily and effortlessly recognize the faces of our friends and the familiar objects and scenes around us However these tasks cannot be simple for our visual systems faces are all extremely similar as visual patterns and objects look quite different when viewed from different viewpoints How do our visual systems solve these problems The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces objects and scenes The role of parts and wholes in perception has been studied for a century beginning with the debate between Structuralists who championed the role of elements and Gestalt psychologists who argued that the whole was different from the sum of its parts This is the first volume to focus on the current state of the debate on parts versus wholes as it exists in the field of visual perception by bringing together the views of the leading researchers Too frequently researchers work in only one domain so they are unaware of the ways in which holistic and analytic processing are defined in different areas The contributors to this volume ask what analytic and holistic processes are like whether they contribute differently to the perception of faces objects and scenes whether different cognitive and neural mechanisms code holistic and analytic information whether a single universal system can be sufficient for visual information processing and whether our subjective experience of holistic perception might be nothing more than a compelling illusion The result is a snapshot of the current thinking on how the processing of wholes and parts contributes to our remarkable ability to recognize faces objects and scenes and an illustration of the diverse conceptions of analytic and holistic processing that currently coexist and the variety of approaches that have been brought to bear on the issues Oxford Handbook of Internet Psychology Adam

Joinson, Katelyn McKenna, Tom Postmes, Ulf-Dietrich Reips, 2009-02-12 Over one billion people use the Internet globally. Psychologists are beginning to understand what people do online and the impact being online has on behaviour. It's making us re-think many of our existing assumptions about what it means to be a social being. For instance, if we can talk, flirt, meet people and fall in love online, this challenges many of psychology's theories that intimacy or understanding requires physical co-presence. The Oxford Handbook of Internet Psychology brings together many of the leading researchers in what can be termed Internet Psychology. Though a very new area of research, it is growing at a phenomenal pace. In addition to well-studied areas of investigation such as social identity theory, computer-mediated communication and virtual communities, the volume also includes chapters on topics as diverse as deception and misrepresentation, attitude change and persuasion online, Internet addiction, online relationships, privacy and trust, health and leisure use of the Internet and the nature of interactivity. With over 30 chapters written by experts in the field, the range and depth of coverage is unequalled and serves to define this emerging area of research. Uniquely, this content is supported by an entire section covering the use of the Internet as a research tool, including qualitative and quantitative methods, online survey design, personality testing, ethics and technological and design issues. While it is likely to be a popular research resource to be dipped into as a whole volume, it is coherent and compelling enough to act as a single text book. The Oxford Handbook of Internet Psychology is the definitive text on this burgeoning field. It will be an essential resource for anyone interested in the psychological aspects of Internet use or planning to conduct research using the net.
