Blood in the Arena Alison Futrell,2010-05-28 Fresh perspectives on the study of the Roman amphitheater providing important insights into the psychological dimensions of gladiatorial combat Classical World From the center of Imperial Rome to the farthest reaches of ancient Britain Gaul and Spain amphitheaters marked the landscape of the Western Roman Empire Built to bring Roman institutions and the spectacle of Roman power to conquered peoples many still remain as witnesses to the extent and control of the empire In this book Alison Futrell explores the arena as a key social and political institution for binding Rome and its provinces She begins with the origins of the gladiatorial contest and shows how it came to play an important role in restructuring Roman authority in the later Republic She then traces the spread of amphitheaters across the Western Empire as a means of transmitting and maintaining Roman culture and control in the provinces Futrell also examines the larger implications of the arena as a venue for the ritualized mass slaughter of human beings showing how the gladiatorial competition took on both religious and political overtones This wide ranging study which draws insights from archaeology and anthropology as well as Classics broadens our understanding of the gladiatorial show and its place within the highly politicized cult practice of the Roman Empire

Spielman, 2020-09-15 Countering the traditional belief that Jews in antiquity were predominantly disinterested in the popular entertainments of the Greek and Roman world Loren R Spielman maps the varieties of Jewish engagement with theater athletics horse racing gladiatorial and beast shows in antiquity The author argues that Jews from Hellenistic Alexandria to late antique Sepphoris enjoyed and exploited or alternatively resisted and scorned popular forms of public entertainment as they adapted to the political social and religious realities of imperial rule Including references to ancient Jewish actors athletes promoters and plays alongside analysis of rabbinic and other early Jewish critique of sport and spectacle Loren R Spielmandescribes the different ways that attitudes towards entertainment might have played a role in shaping ancient Jewish identity Neurobiology of Spontaneous Object Exploration in Recognition Memory Owen Chao, Flavio F. Barbosa, Mario Inostroza, Jay-Shake Li, James A. Ainge, 2023-06-01 Animals show a natural tendency to explore novel as opposed to familiar stimuli suggesting an underlying memory process in regard to previously encoded information Dependent on this tendency spontaneous object exploration paradigms have been developed in animals to measure memory processes regarding what an object is where an object is located when an object is present the association of an object and its location in which context an object is shown and an episodic context of the combined what where when components These paradigms feature in the absence of extensive training and reward or aversive incentives analogous to incidental encoding of daily memory The application of these object exploration tests is broad and covers many fields such as behavioral neuroscience psychopharmacology and the neurobiology of recognition memory across species The medial prefrontal cortex parietal cortex and medial temporal lobe the hippocampus entorhinal cortex perirhinal cortex and parahippocampal cortex are the main neuroanatomical structures that are considered to underlie recognition memory However the retrosplenial cortex insular cortex anterior thalamus nucleus reuniens of thalamus striatum and amygdala are also considered to play a part As well recent findings also indicate that the lateral hypothalamus interpeduncular nucleus and cerebellum contribute to recognition memory under certain conditions Neurotransmitter systems actively mediate and orchestrate the neuronal communication between these structures during the processing of learning and memory An entire picture of the neuroanatomy and neurobiology of recognition memory will however require multidisciplinary approaches of imaging lesion pharmacology optogenetics chemogenetics and behavioral studies Recognition memory deficits are also major symptoms in multiple neuropsychiatric and neurodegenerative disorders such as schizophrenia attention deficit hyperactivity disorder depressive disorder bipolar disorder autism spectrum disorder Parkinson s disease dementia and Alzheimer s disease Although the etiology of the shared memory deficits is not fully understood it may be associated with environmental pharmacological and genetic factors that are commonly exposed to these disorders Spontaneous object exploration paradigms with minimal involvement of emotional valences are appropriate in the study of neuropsychiatric and

neurodegenerative disorders as these disorders may sensitize one to emotional stimuli leading to a deficit in recognition memory Given the impact of these disorders and their memory deficits on our society there is a strong need to understand the underlying mechanisms and development of innovative pharmaceuticals and gene therapeutics Geology of the Henry Mountains, Utah, as Recorded in the Notebooks of G.K.
