Natural Capital and Exploitation of the Deep Ocean Maria Baker,Eva Ramirez-Llodra,Paul Tyler,2020-08-28 The deep ocean is by far the planet's largest biome and holds a wealth of potential natural assets Human exploitation of the deep ocean is rapidly increasing whilst becoming more visible to many through the popular media particularly film and television The scientific literature of deep sea exploitation and its effects has also rapidly expanded as a direct function of this increased national and global interest in exploitation of deep sea resources both biological e.g. fisheries genetic resources and non biological e.g. minerals oil gas methane hydrate At the same time there is a growing interest in deep sea contamination including plastics with many such studies featured in high profile scientific journals and covered by global media outlets However there is

currently no comprehensive integration of this information in any form and these topics are only superficially covered in classic textbooks on deep sea biology This concise and accessible work provides an understanding of the relationships between biodiversity and ecosystem functioning both at the seafloor and in the water column and how these might be affected as a result of human interaction exploitation and ultimately environmental change It follows a logical progression from geological and physical processes ecology biology and biogeography to exploitation management and conservation Natural Capital and Exploitation of the Deep Ocean is aimed at marine biologists and ecologists oceanographers fisheries scientists and managers fish biologists environmental scientists and conservation biologists It will also be of relevance and use to a multi disciplinary audience of fish and wildlife agencies NGOs and government departments involved in deep sea conservation and management

It challenges us to harness the power of innovation with care and foresight ensuring that the treasures of the deep are not squandered but serve as a foundation for a sustainable and equitable future. *The Eternal Darkness* Robert D. Ballard, Will Hively, 2000. Until a few decades ago the ocean depths were almost as mysterious and inaccessible as outer space. Oceans cover two thirds of the earth's surface with an average depth of more than two miles yet humans had never ventured more than a few hundred feet below the waves. One of the great scientific and archaeological feats of our time has been finally to cast light on the eternal darkness of the deep sea. This is the story of that achievement told by the man who has done more than any other to make it possible. Robert Ballard. Ballard discovered the wreck of the Titanic. He led the teams that discovered hydrothermal vents and black smokers cracks in the ocean floor where springs of superheated water support some of the strangest life forms on the planet. He was a diver on the team that explored the mid Atlantic ridge for the first time confirming the theory of plate tectonics. Today using a nuclear submarine from the U S Navy he's exploring the ancient trade routes of the Mediterranean and the Black Sea for the remains of historic vessels and their cargo. In this book he combines science history spectacular illustrations and first hand stories from his own expeditions in a uniquely personal account of how twentieth century explorers have pushed back the frontiers of technology to take us into the midst of a world we could once only guess at. Ballard begins in 1930 with William Beebe and Otis Barton pioneers of the ocean depths who made the world's first deep sea dives in a cramped steel sphere. He introduces us to Auguste and Jacques Piccard whose *Bathyscaphe* descended in 1960 to the lowest point on the ocean floor. He reviews the celebrated advances made by Jacques Cousteau. He describes his own major discoveries from sea floor spreading to black smokers as well as his technical breakthroughs including the development of remote operated underwater vehicles and the revolutionary search techniques that led to the discovery and exploration of the Titanic the Nazi battleship *Bismarck* ancient trading vessels and other great ships. Readers will come away with a richer understanding of history earth science biology and marine technology and a new appreciation for the remarkable men and women who have explored some of the most remote and fascinating places on the planet.
