Its In The Noise:

Japanoise David Novak, 2013-07-17 Noise an underground music made through an amalgam of feedback distortion and electronic effects first emerged as a genre in the 1980s circulating on cassette tapes traded between fans in Japan Europe and North America With its cultivated obscurity ear shattering sound and over the top performances Noise has captured the imagination of a small but passionate transnational audience For its scattered listeners Noise always seems to be new and to come from somewhere else in North America it was called Japanoise But does Noise really belong to Japan Is it even music at all And why has Noise become such a compelling metaphor for the complexities of globalization and participatory media at the turn of the millennium In *Japanoise* David Novak draws on more than a decade of research in Japan and the United States to trace the cultural feedback that generates and sustains Noise He provides a rich ethnographic account of live performances the circulation of recordings and the lives and creative practices of musicians and listeners He explores the technologies of Noise and the productive distortions of its networks Capturing the textures of feedback its sonic and cultural layers and vibrations Novak describes musical circulation through sound and listening recording and performance international exchange and the social interpretations of media

Analyzes audio recordings of interwar Hebrew plays providing a new model for the use of sound in theater studies. Possessed Voices tells the intriguing story of a largely unknown collection of audio recordings, a valuable tool for understanding historical theater which preserve performances of modernist interwar Hebrew plays. Seldom used in scholarship, Ruthie Abeliovich focuses on four recordings: a 1931 recording of The Eternal Jew, 1919, a 1965 recording of The Dybbuk, 1922, a 1961 radio play of The Golem, 1925, and a 1952 radio play of Yaakov and Rachel, 1928. Abeliovich traces the spoken language of modernist Hebrew theater as grounded in multiple modalities of expressive practices including spoken Hebrew, Jewish liturgical sensibilities supplemented by

Yiddish intonation and other vernacular accents and in relation to prevalent theatrical forms The book shows how these performances provided Jewish immigrants from Europe with a venue for lamenting the decline of their home communities and for connecting their memories to the present Analyzing sonic material against the backdrop of its artistic cultural and ideological contexts Abeliovich develops a critical framework for the study of sound as a discipline in its own right in theater scholarship The author's focus on historicizing and analyzing sound recordings and radio plays as a means to tackle the pervasive ephemerality problem in theater studies is a novel and valuable approach that represents a significant intervention in the field These types of sources have had scant attention in theater studies to date but Abeliovich makes a compelling argument that they belong at the center Debra Caplan author of Yiddish Empire The Vilna Troupe Jewish Theater and the Art of Itinerancy

Radar Systems Analysis and Design Using MATLAB Bassem R. Mahafza, 2022-03-28 The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software The book very quickly turned into a bestseller Based on feedback provided by several users and drawing from the author's own teaching experience the 4th edition adopts a new approach The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar sub systems and components Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function Each chapter provides the

necessary mathematical and analytical coverage required for a sound understanding of radar theory. Additionally, dedicated MATLAB functions and programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades. The software provides users with numerous varieties of graphical outputs. Additionally, a complete set of MATLAB code that generates all plots and graphs found within the pages of this textbook are also available. All companion MATLAB code can be downloaded from the book's web page. The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release. Brings the text to a current state of the art. Carrier Communication over Power Lines Heinrich-K. Podszceck, 2012-12-06

Carrier communication over power lines like carrier traffic over postal lines has a tradition of about 50 years. It has become a vital element in electric system operation. Being restricted to power networks it has a comparatively limited scope. Nevertheless great efforts are being expended to keep pace with the demands made pending on technical advancement of both power and communication engineering. As in previous editions of this book it is endeavored in the fourth edition to familiarize the man in the field with the fundamental concepts on which this technique and its practical application are based. The physical and electrical characteristics of the equipment involved are described in a general way. For the sake of clarity the author has refrained from giving a detailed account or illustrations of special versions especially as the differences between the equipment supplied by the various manufacturers are so small. This is due to the use of transistors instead of tubes and to the universally adopted plug-in module construction technique. In the load dispatching plants of power supply networks tele metering systems are turning more and more to data engineering methods and equipment to lighten the task of network management. Consequently at certain points in the text topics concerning remote data processing are treated emphasis being placed on transmission channels operating at a considerably higher speed than was usual 10 years ago.

Instrumentation, Measurements, and Experiments in Fluids Ethirajan Rathakrishnan, 2007-05-21
