*Distances and Similarities in Intuitionistic Fuzzy Sets* Eulalia Szmidt, 2013-07-23 This book presents the state of the art in theory and practice regarding similarity and distance measures for intuitionistic fuzzy sets Quantifying similarity and distances is crucial for many applications e g data mining machine learning decision making and control The work provides readers with a comprehensive set of theoretical concepts and practical tools for both defining and determining similarity between intuitionistic fuzzy sets It describes an automatic algorithm for deriving intuitionistic fuzzy sets from data which can aid in the analysis of information in large databases The book also discusses other important applications e g the use of similarity measures to evaluate the extent of agreement between experts in the context of decision making

Invariants for Pattern Recognition and Classification Marcos A. Rodrigues, 2000 This book was conceived from the realization that there was a need to update recent work on invariants in a single volume providing a useful set of references and pointers to related work Since the publication in 1992 of J L Mundy and A Zisserman s Geometric Invariance in Computer Vision the subject has been evolving rapidly New approaches to invariants have been proposed and novel ways of defining and applying invariants to practical problem solving are testimony to the fundamental importance of the study of invariants to machine vision This book represents a snapshot of current research around the world A version of this collection of papers has appeared in the International Journal of Pattern Recognition and Artificial Intelligence December 1999 The papers in this book are extended versions of the original material published in the journal They are organized into two categories foundations and applications Foundation papers present new ways of defining or analyzing invariants and application papers present novel ways in which known invariant theory is extended and effectively applied to real world problems in interesting and difficult contexts Each

category contains roughly half of the papers but there is considerable overlap All papers carry an element of novelty and generalization that will be useful to theoreticians and practitioners alike It is hoped that this volume will be not only useful but also inspirational to researchers in image processing pattern recognition and computer vision at large

**Principles of Visual Information Retrieval** Michael S. Lew, 2013-03-14 Principles of Visual Information Retrieval introduces the basic concepts and techniques in VIR and develops a foundation that can be used for further research and study Divided into 2 parts the first part describes the fundamental principles A chapter is devoted to each of the main features of VIR such as colour texture and shape based search There is coverage of search techniques for time based image sequences or videos and an overview of how to combine all the basic features described and integrate context into the search process The second part looks at advanced topics such as multimedia query specification visual learning and semantics and offers state of the art coverage that is not available in any other book on the market This book will be essential reading for researchers in VIR and for final year undergraduate and postgraduate students on courses such as Multimedia Information Retrieval Multimedia Databases Computer Vision and Pattern Recognition

*Advances in Visual Information Systems* Robert Laurini, 2003-07-31 Presently in our world visual information dominates The turn of the millenium marks the age of visual information systems Enabled by picture sensors of all kinds turning digital visual information will not only enhance the value of existing information it will also open up a new horizon of previously untapped information sources There is a huge demand for visual information access from the consumer As well the handling of visual information is boosted by the rapid increase of hardware and Internet capabilities Advanced technology for visual information systems is more urgently needed than ever before not only new computational methods to retrieve index compress and uncover pictorial information but also new metaphors to organize user interfaces Also new ideas and algorithms are needed which allow access to very large databases of digital pictures and videos Finally we should not forget new systems with visual interfaces integrating the above components into new types of image video or multimedia databases and hyperdocuments All of these technologies will enable the construction of systems that are radically different from conventional information systems Many novel issues will need to be addressed query formulation for pictorial information consistency management thereof indexing and assessing the quality of these systems Historically the expression Visual Information Systems can be understood either as a system for image information or as visual system for any kind information

**Advanced Video Coding: Principles and Techniques** K.N. Ngan,T. Meier,D. Chai,1999-08-31 In recent years the paradigm of video coding has shifted from that of a frame based approach to a content based approach particularly with the finalization of the ISO multimedia coding standard MPEG 4 MPEG 4 is the emerging standard for the coding of multimedia content It defines a syntax for a set of content based functionalities namely content based interactivity compression and universal access However it does not specify how the video content is to be generated To generate the video content video has to be segmented into video objects and tracked as they transverse across

the video frames This book addresses the difficult problem of video segmentation and the extraction and tracking of video object planes as defined in MPEG 4 It then focuses on the specific issue of face segmentation and coding as applied to videoconferencing in order to improve the quality of videoconferencing images especially in the facial region Modal based coding is a content based coding technique used to code synthetic objects that have become an important part of video content It results in extremely low bit rates because only the parameters needed to represent the modal are transmitted Model based coding is included to provide background information for the synthetic object coding in MPEG 4 Lastly MPEG 4 the first coding standard for multimedia content is described in detail The topics covered include the coding of audio objects the coding of natural and synthetic video objects and error resilience Advanced Video Coding is one of the first books on content based coding and MPEG 4 coding standard It serves as an excellent information source and reference for both researchers and practicing engineers
