Maximum-Likelihood Deconvolution Jerry M. Mendel, 2012-12-06 Convolution is the most important operation that describes the behavior of a linear time invariant dynamical system Deconvolution is the unraveling of convolution It is the inverse problem of generating the system's input from knowledge about the system's output and dynamics Deconvolution requires a careful balancing of bandwidth and signal to noise ratio effects Maximum likelihood deconvolution MLD is a design procedure that handles both effects It draws upon ideas from Maximum Likelihood when unknown parameters are random It leads to linear and nonlinear signal processors that provide high resolution estimates of a system's input All aspects of MLD are described from first principles in this book The purpose of this volume is to explain MLD as simply as possible To do this the entire theory of MLD is presented in terms of a convolutional signal generating model and some relatively simple ideas from optimization theory Earlier approaches to MLD which are couched in the language of state variable models and estimation theory are unnecessary to understand the essence of MLD MLD is a model based signal processing procedure because it is based on a signal model namely the convolutional model The book focuses on three aspects of MLD 1 specification of a probability model for the system's measured output 2 determination of an appropriate likelihood function and 3 maximization of that likelihood function Many practical algorithms are obtained

Computational aspects of MLD are described in great detail Extensive simulations are provided including real data applications Advanced Methods of Pharmacokinetic and Pharmacodynamic Systems Analysis David D'Argenio,2013-06-29 This volume records the proceedings of the Workshop on Advanced Methods of Pharmacokinetic and Pharmacodynamic Systems Analysis organized by the Biomedical Simulations Resource in May 1990 The meeting brought together over 120 investigators from a number of disciplines including clinical pharmacology clinical pharmacy pharmaceutical science biomathematics statistics and biomedical engineering with the purpose of providing a high level forum to facilitate the exchange of ideas between basic and clinical research scientists experimentalists and modelers working on problems in pharmacokinetics and pharmacodynamics It has been my experience that in many areas of biomedical research when a meeting of this type is held the general attitude of those experimentalists willing to attend is one of extreme skepticism as a group they feel that mathematical modeling has little to offer them in furthering their understanding of the particular biological processes they are studying This is certainly not the prevailing view when the topic is pharmacokinetics and drug response Quite the contrary the use of mathematical modeling and associated data analysis and computational methods has been a central feature of pharmacokinetics almost from its beginnings In fact the field has borrowed techniques of modeling from other disciplines including applied mathematics statistics and engineering in an effort to better describe and understand the processes of drug disposition and drug response **Digital Signal Processing with Matlab Examples, Volume 3** Jose Maria Giron-Sierra,2016-11-21 This is the third volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This book includes MATLAB codes to illustrate each of the main steps of the theory offering a self contained guide suitable for independent study The code is embedded in the text helping readers to put into practice the ideas and methods discussed The book primarily focuses on filter banks wavelets and images While the Fourier transform is adequate for periodic signals wavelets are more suitable for other cases such as short duration signals bursts spikes tweets lung sounds etc Both Fourier and wavelet transforms decompose signals into components Further both are also invertible so the original signals can be recovered from their components Compressed sensing has emerged as a promising idea One of the intended applications is networked devices or sensors which are now becoming a reality accordingly this topic is also addressed A selection of experiments that demonstrate image denoising applications are also included In the interest of reader friendliness the longer programs have been grouped in an appendix further a second appendix on optimization has been added to supplement the content of the last chapter **Kalman Filtering** Mohinder S. Grewal,Angus P. Andrews,2011-09-20 This book provides readers with a solid introduction to the theoretical and practical aspects of Kalman filtering It has been updated with the latest developments in the implementation and application of Kalman filtering including adaptations for nonlinear filtering more robust smoothing methods and developing applications in navigation All software is

provided in MATLAB giving readers the opportunity to discover how the Kalman filter works in action and to consider the practical arithmetic needed to preserve the accuracy of results Note CD ROM DVD and other supplementary materials are not included as part of eBook file An Instructor s Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department to obtain the manual send an email to ialine@wiley.com *Approximate Kalman Filtering* Guanrong Chen,1993-08-30 Kalman filtering algorithm gives optimal linear unbiased and minimum error variance estimates of the unknown state vectors of a linear dynamic observation system under the regular conditions such as perfect data information complete noise statistics exact linear modeling ideal well conditioned matrices in computation and strictly centralized filtering In practice however one or more of the aforementioned conditions may not be satisfied so that the standard Kalman filtering algorithm cannot be directly used and hence approximate Kalman filtering becomes necessary In the last decade a great deal of attention has been focused on modifying and or extending the standard Kalman filtering technique to handle such irregular cases It has been realized that approximate Kalman filtering is even more important and useful in applications This book is a collection of several tutorial and survey articles summarizing recent contributions to the field along the line of approximate Kalman filtering with emphasis on both its theoretical and practical aspects

Kalman Filtering Charles K. Chui, Guanrong Chen, 2013-06-29 In addition to making a number of minor corrections and updating the references we have expanded the section on real time system identification in Chapter 10 of the first edition into two sections and combined it with Chapter 8 In its place a very brief introduction to wavelet analysis is included in Chapter 10 Although the pyramid algorithms for wavelet decompositions and reconstructions are quite different from the Kalman filtering algorithms they can also be applied to time domain filtering and it is hoped that splines and wavelets can be incorporated with Kalman filtering in the near future College Station and Houston Charles K Chui September 1990 Guanrong Chen Preface to the First Edition Kalman filtering is an optimal state estimation process applied to a dynamic system that involves random perturbations More precisely the Kalman filter gives a linear unbiased and minimum error variance recursive algorithm to optimally estimate the unknown state of a dynamic system from noisy data taken at discrete real time It has been widely used in many areas of industrial and government applications such as video and laser tracking systems satellite navigation ballistic missile trajectory estimation radar and fire control With the recent development of high speed computers the Kalman filter has become more useful even for very complicated real time applications

Depth From Defocus: A Real Aperture Imaging Approach Subhasis Chaudhuri, A.N. Rajagopalan, 2012-12-06 Computer vision is becoming increasingly important in several industrial applications such as automated inspection robotic manipulations and autonomous vehicle guidance These tasks are performed in a 3 D world and it is imperative to gather reliable information on the 3 D structure of the scene This book is about passive techniques for depth recovery where the scene is illuminated only by natural light as opposed to active methods where a special lighting device is used for scene illumination Passive methods have a wider range of applicability and also correspond to the way humans infer 3 D structure from visual images

Nonlinear Image Processing Giovanni Sicuranza, 2001 This state of the art book deals with the most important aspects of non linear imaging challenges The need for engineering and mathematical methods is essential for defining non linear effects involved in such areas as computer

vision optical imaging computer pattern recognition and industrial automation challenges Nonlinear Filtering Jitendra R. Raol, Girija Gopalratnam, Bhekisipho Twala, 2017-07-12 Nonlinear Filtering covers linear and nonlinear filtering in a comprehensive manner with appropriate theoretic and practical development Aspects of modeling estimation recursive filtering linear filtering and nonlinear filtering are presented with appropriate and sufficient mathematics A modeling control system approach is used when applicable and detailed practical applications are presented to elucidate the analysis and filtering concepts MATLAB routines are included and examples from a wide range of engineering applications including aerospace automated manufacturing robotics and advanced control systems are referenced throughout the text
