Genetics George Harrison Shull, Donald Forsha Jones, Leslie Clarence Dunn, Curt Stern, Royal Alexander Brink, 1926
Genetics accepts contributions that present the results of original research in genetics and related scientific disciplines

Sex and Death in Protozoa Graham Bell, 1988 Is ageing inevitable or can senescence and death be evaded Large animals and plants always age if they live long enough even individual cells from their bodies cannot continue living and dividing indefinitely Whether or not single celled organisms also age and die and what relation sex bore to the process of senescence was the subject of vigorous debate and experimentation early in the last century In this book Dr Bell disinters and reanalyzes these forgotten experiments and argues that protozoan lineages do indeed senesce as the result of an accumulated load of mutations that can be shed only through sexual reproduction This unexpected connection between sex and death is the central theme of a book that will interest all students of evolutionary biology sexuality and senescence **The Cassidy**

Limits of Empire: European Imperial Formations in Early Modern World History William Reger,2016-03-03 This volume published in honor of historian Geoffrey Parker explores the working of European empires in a global perspective focusing on one of the most important themes of Parker s work the limits of empire which is to say the centrifugal forces sacral dynastic military diplomatic geographical informational that plagued imperial formations in the early modern period 1500 1800 During this time of wrenching technological demographic climatic and economic change empires had to struggle with new religious movements incipient nationalisms new sea routes new military technologies and an evolving state system with complex new rules of diplomacy Engaging with a host of current debates the chapters in this book break away from conventional historical conceptions of empire as an essentially western phenomenon with clear demarcation lines between the colonizer and the colonized These are replaced here by much more fluid and subtle conceptions that highlight complex interplays between coalitions of rulers and ruled In so doing the volume builds upon recent work that increasingly suggests that empires simply could not exist without the consent of their imperial subjects or at least significant groups of them This was as true for the British Raj as it was for imperial China or Russia Whilst the thirteen chapters in this book focus on a number of geographic regions and adopt different approaches each shares a focus on and interest in the working of empires and the ways that imperial formations dealt with or failed to deal with the challenges that beset them Taken together they reflect a new phase in the evolving historiography of empire They also reflect the scholarly contributions of the dedicatee Geoffrey Parker whose life and work are discussed in the introductory chapters and we re proud to say in a delightful chapter by Parker himself an autobiographical reflection that closes the book [Genetic Analysis of the Cell Surface](#) P.

Goodfellow,2013-12-11 The cell surface is the barrier between the cell and its environment which regulates the flow of both simple and complex molecules into and out of the cell it is also the organelle responsible for communication between the cell and its environment Each cell expresses receptors for a wide variety of hormones growth factors growth substrates and other

cells In multicellular organisms communication between cells is required for controlling development cellular differentiation morphogenesis and in a more general sense integration of myriad cell types into a single organism The series Receptors and Recognition has as its overall aim the dissection of the cell surface to correlate structure and function for this complex organelle In most of the preceding volumes the approach has been biochemical or physiological In this volume the mammalian cell surface is analysed by a genetic approach Genetic analysis of the cell surface especially when combined with immunological techniques has a long history In 1900 Landsteiner showed that serum from one individual could agglutinate the red cells of another Besides the practical result of making blood transfusion safe this was the first demonstration of a human genetic polymorphism and for the next 50 years the red blood cell surface provided most of the genetic markers used to study human populations
