Lethal Risk:

Lethal Risks and New Zealand Police / Ngā Pirihimana o Aotearoa Richard S. Shortt, 2023-11-08 This book examines the lethal risks faced by police and traffic officers in Aotearoa New Zealand It tracks lethal risk volume and type across 134 years of the New Zealand Police Ng Pirihimana o Aotearoa s 137 year existence Using data gathered from public records official government reporting and comparative studies it reveals the current situation with regards to lethal risks from 1886 to 2019 The book identifies and presents two lethal risk hierarchies the first for the period 1886 1999 and the second for the period 2000 2019 The hierarchies establish that the lethal risks faced come from Firearms Assaults And potentially Cutting Stabbing attacks It determines that the nature of lethal risk has not changed but rather the volume has reduced meaning today s officers are less likely to be harmed by lethal risk encounters than their predecessors were This volume is an ideal starting point for researchers and practitioners interested in developing further scholarly research on lethal force and lethal risks faced by law enforcement officers and the organization they belong to *Risk Layla* Skinns, Michael Scott, Tony Cox, 2011-09-01 Recent events from the economic downturn to climate change mean that there has never been a better time to be thinking about and trying to better understand the concept of risk In this book prominent and eminent speakers from fields as diverse as statistics to classics neuroscience to criminology politics to astronomy as well as speakers embedded in the media and in government have put their ideas down on paper in a series of essays that broaden our understanding of the meaning of risk The essays come from the prestigious Darwin College Lecture Series which after twenty five years is one of the most popular public lecture series at the University of Cambridge The risk lectures in 2010 were amongst the most popular yet and in essay form they make for a lively and engaging read for specialists and non specialists alike **Military Ethics and Emerging Technologies** Timothy J. Demy, George R. Lucas Jr., Bradley J. Strawser, 2016-01-08 This volume looks at current and emerging technologies of war and some of the ethical issues surrounding their use Although the nature and politics of war never change the weapons and technologies used in war do change and are always undergoing development Because of that the arsenal of weapons for twenty first century conflict is different from previous centuries Weapons in today s world include an array of instruments of war that include robotics cyber war capabilities human performance enhancement for warriors and the proliferation of an entire spectrum of unmanned weapons systems and platforms Tactical weapons now have the potential of strategic results and have changed the understanding of the battle space creating ethical legal and political issues unknown in the pre 9 11 world What do these technologies mean for things such as contemporary international relations the just war tradition and civil military relations Directed at readers in the academic scientific military and public policy communities this volume offers current thought on ethics and emerging technologies from internationally recognized scholars addressing the full spectrum of issues in present warfare technology It includes current and ongoing topics of multi discipline and international interest such as ethics law

international relations war studies public policy science and technology This book was originally published in various issues and volumes of the Journal of Military Ethics Negotiated Risks Rudolf Avenhaus, Gunnar Sjöstedt, 2009-04-28 The International Institute for Applied Systems Analysis IIASA has had risk as a research topic on its agenda right from its inception in 1972 Risk has played a role in the Energy Program with research being carried out both in house and in cooperation with other international institutions like the International Atomic Energy Agency IAEA and national research centers Research areas were primarily the evaluation of all possible risks within one category of energy supply like nuclear fission or fusion or fossil fuels and even more important the comparison of risks of different energy supply strategies Later on an independent program was started which still exists today under the name Risk and Vulnerability There is a large amount of literature on risks to which IIASA's research programs have contributed significantly over the years and there is of course an abundance of published work on international negotiations part of which is a result of the work of the Processes of International Negotiation PIN Program There are however so far no studies on the combination of these two strands Therefore and as research on both topics is housed at IIASA we are happy that our PIN Program has undertaken the difficult and important task of analyzing what the editors of this book have called negotiated risks Zoopolis Sue Donaldson, Will Kymlicka, 2011-11-25 Zoopolis offers a new agenda for the theory and practice of animal rights Most animal rights theory focuses on the intrinsic capacities or interests of animals and the moral status and moral rights that these intrinsic characteristics give rise to Zoopolis shifts the debate from the realm of moral theory and applied ethics to the realm of political theory focusing on the relational obligations that arise from the varied ways that animals relate to human societies and institutions Building on recent developments in the political theory of group differentiated citizenship Zoopolis introduces us to the genuine political animal It argues that different types of animals stand in different relationships to human political communities Domesticated animals should be seen as full members of human animal mixed communities participating in the cooperative project of shared citizenship Wilderness animals by contrast form their own sovereign communities entitled to protection against colonization invasion domination and other threats to self-determination Liminal animals who are wild but live in the midst of human settlement such as crows or raccoons should be seen as denizens resident of our societies but not fully included in rights and responsibilities of citizenship To all of these animals we owe respect for their basic inviolable rights But we inevitably and appropriately have very different relations with them with different types of obligations Humans and animals are inextricably bound in a complex web of relationships and Zoopolis offers an original and profoundly affirmative vision of how to ground this complex web of relations on principles of justice and compassion Upstream/downstream Donald Scherer, 1990 **Military Robots** Jai Galliott, 2016-04-22 Philosophers have wrestled over the morality and ethics of war for nearly as long as human beings have been waging it The death and destruction that unmanned warfare entails magnifies the moral and ethical challenges we face in conventional warfare and

everyday society Intrinsically linked are questions and perennial problems concerning what justifies the initial resort to war who may be legitimately targeted in warfare who should be permitted to serve the military the collateral effects of military weaponry and the methods of determining and dealing with violations of the laws of war This book provides a comprehensive and unifying analysis of the moral political and social questions concerning the rise of drone warfare **The Applied Ethics of Emerging Military and Security Technologies** Braden R. Allenby, 2016-12-05 The essays in this volume illustrate the difficult real world ethical questions and issues arising from accelerating technological change in the military and security domains and place those challenges in the context of rapidly shifting geopolitical and strategic frameworks Specific technologies such as autonomous robotic systems unmanned aerial vehicles cybersecurity and cyberconflict and biotechnology are highlighted but the essays are chosen so that the broader implications of fundamental systemic change are identified and addressed Additionally an important consideration with many of these technologies is that even if they are initially designed and intended for military or security applications they inevitably spread to civil society where their application may raise very different ethical questions around such core values as privacy security from criminal behaviour and state police power Accordingly this volume is of interest to students of military or security domains as well as to those interested in technology and society and the philosophy of technology Drone Warfare John Kaag, Sarah Kreps, 2014-07-17 Choice Outstanding Academic Title for 2015 One of the most significant and controversial developments in contemporary warfare is the use of unmanned aerial vehicles commonly referred to as drones In the last decade US drone strikes have more than doubled and their deployment is transforming the way wars are fought across the globe But how did drones claim such an important role in modern military planning And how are they changing military strategy and the ethics of war and peace What standards might effectively limit their use Should there even be a limit Drone warfare is the first book to engage fully with the political legal and ethical dimensions of UAVs In it political scientist Sarah Kreps and philosopher John Kaag discuss the extraordinary expansion of drone programs from the Cold War to the present day and their so called effectiveness in conflict zones Analysing the political implications of drone technology for foreign and domestic policy as well as public opinion the authors go on to examine the strategic position of the United States by far the worlds most prolific employer of drones to argue that US military supremacy could be used to enshrine a new set of international agreements and treaties aimed at controlling the use of UAVs in the future **Drug Addiction and AIDS** Norbert Loimer, Rainer Schmid, Alfred Springer, 2012-12-06 AIDS and drug addiction is a topic of great and growing concern AIDS first appeared among intravenous drug users in Europe in 1984 three years after the first cases were seen among homosexuals This epidemic has spread more rapidly among intravenous drug users than in any other risk group The high rates of HIV 1 seroprevalence among drug users in France Italy and Spain account for 85% of the total number of AIDS in intravenous drug users in Europe It is anticipated that HIV infected drug users will soon place a heavy burden on both drug treatment facilities and specialized

health care units The HIV 1 epidemic will also cross the former iron curtain This contribution covers the wide and complex scene of drug problems and addiction as a whole It gives researchers an opportunity to obtain background information on the spread of HIV and AIDS among intravenous drug users as well as on the clinical and psychological effects of HIV 1 infection and AIDS in Europe The topics reviewed include surveys of intravenous drug use HIV prevalence detoxification risk reduction changing health behaviors evaluating AIDS interventions and the impact of methadone maintenance treatment This monograph will be of value to all clinicians researchers and policy makers who are concerned with the connection between intravenous drug use and AIDS

To Kill Another Graham McAleer, 2017-07-12 Basing his argument on natural law Graham J McAleer asserts that only public authority has the right to intentionally kill He draws upon the work of Thomas Aquinas and Francisco de Vitoria defending the claim that these natural law theorists have developed the best available theory of homicide To have rule of law in any meaningful sense the author argues there must be protections for the guilty and prohibition against killing innocents Western theories of law have drifted steadily towards the privatization of homicide despite the fact that it runs counter to rule of law Public acts of homicide like capital punishment are now viewed by many as barbaric while a private act of homicide like the starvation of comatose patients is viewed by many as a caring gesture both to patient and family This subversion of the rule of law is prompted by humanitarian ethics McAleer argues that humanitarianism is a false friend to those committed to the rule of law The problem of human vulnerability makes political theology an inescapable consideration for law Readers will find much to reflect upon in this book McAleer s argument can be

read as a cultural chapter in the history of moral ideas but also as a close and timely reading of a grim subject
