Kia Makki, Niki Pissinou, 1995. Proceedings of a September 1995 conference. Contents include 56 long papers and 32 short papers, each read by at least three reviewers before acceptance. Among the session topics: performance modeling, traffic management, Internet service, network security, multicasting, reliability, the global information infrastructure, interoperability, mobile computing. Data and Computer Communications Gurdeep S. Hura, Mukesh Singhal, 2001-03-28. The protocols and standards for networking are numerous and complex. Multivendor internetworking, crucial to present-day users, requires a grasp of these protocols and standards. Data and Computer Communications Networking and Internetworking a comprehensive text/reference brings clarity to all of the complex issues involved in networking activity, providing excellent instruction for students and an indispensable reference for practitioners. This systematic work answers a vast array of questions about overall network architecture, design, protocols, and deployment issues. It offers a practical, thorough treatment of the applied concepts of data and computer communication systems, including signaling, basics, transmission of digital signals, and layered architecture. The book features in-depth discussions of integrated digital networks, integrated services, digital networks, and high-speed networks, including currently evolving technologies such as ATM switching and their applications in multimedia technology. It also presents the state of the art in Internet technology, its services, and implementations. The balance of old and new networking technologies presents an appealing set of topics for both undergraduate students and computer and networking professionals. This book presents all seven layers of OSI-based networks in great detail, covering services, functions, design issues, interfacing, and protocols. With its introduction to the basic concepts and practical aspects of the field, Data and Computer Communications Networking and Internetworking helps you keep up with the rapidly growing and dominating computer networking technology. Planning and Architectural Design of Modern Command Control Communications and Information Systems A. Nejat Ince, Cem Evrendilek, Dag Wilhelmsen, Fadil Gezer, 2012-12-06. The subject of this book is Command Control Communication and Information 3 C I, which is the management infrastructure for any large or complex dynamic resource systems. Here, command means the determination of

what to do and control means the ongoing management of the execution of a command 3 Decision making is the essence of C I which is accomplished through a phased implementation of a set of facilities communications personnel equipment and procedures for monitoring forecasting planning directing allocating resources and generating options to achieve specific and general objectives 3 The C I system that is in question here is for a strategic military command including its subordinate commands Although the design methodology that will be expounded in the book is for a military system it can to a large extent apply also to tactical military as well as to civilian management information systems MIS 3 A C I system is a decision making network that reflects a hierarchical organization 3 of C I nodes Each node is responsible for the management of some portion of the available resources where the higher level nodes are responsible for a 3 correspondingly greater portion of the resources Within a C I system both command and control decision making occur at every level of the hierarchy Command decisions at one level determine how to satisfy the management decisions at a higher level
