**Featherweights** Oliver Herwig, 2003 From Bruno Taut's glass house to the Crystal Palace geodesic domes to the Millennium Dome this lavishly illustrated exploration of lightness in architecture explains how and why the movement began and shows where it will take us in the future Architecture has been moving towards lightness since the beginning of the twentieth century As new building materials become available and as land disappears architects have focused on efficiency impermanence and flexibility in structures Illustrating the achievements of the most visionary architects of the past and present Featherweights traces the evolution of lightness in architecture from the fantastic glass structures of the early twentieth century to the latest hi tech materials for the third millennium Covering everything from pre fab houses to inflatable buildings utopian architecture to virtual cities this fascinating exploration illustrates the ongoing dialogue between shelter and society and offers exciting glimpses into a future in which gravity is optional Transportable Environments 3

Kronenburg, 2013-08-15 The idea that architecture can be portable is one that grabs the imagination of both designers and the people who use it perhaps because it so often forecasts a dynamic and creative solution to the complex problems of our contemporary mobile society while at the same time dealing with issues of practicality economy and sustainability *Architecture in Motion* examines the development of portable transportable demountable and temporary architecture from prehistory to the present day From familiar vernacular models such as the tent mobile home and houseboat to ambitious developments in military and construction engineering all aspects of portable building are considered Building on his earlier works *Portable Architecture* and *Houses in Motion* Robert Kronenburg compares traditional forms of building current commercial products and the work of innovative designers and examines key contemporary portable buildings to reveal surprising exciting and imaginative examples He explores the philosophical and technological issues raised by these experimental and futuristic prototypes By understanding the nature of transitory architecture a new ecologically aware design strategy can be developed to prioritise buildings that tread lightly on the earth and still convey the sense of identity and community necessary for an established responsible society This book provides a unique insight into this pivotal field of design **Sustainable Resource Management** Stefan Brinzeu, Raimund Bleischwitz, 2017-09-08 Looking at material

flows industrial and societal metabolism and their implications for the economy this book provides radical perspectives on how the global economy should use natural resources in intelligent ways that maximise well being without destroying life supporting ecosystems

**Retrofitting the City** Stefan Bouzarovski, 2015-11-25 Cities are responsible for three quarters of the world s energy consumption If we are to reduce our demands on the planet s resources how can we make our urban areas more energy efficient One way is to refit existing buildings with more thermally efficient building materials But such retrofitting involves significant issues of social acceptance and public participation Retrofitting the City provides an important corrective to the assumptions that have been made concerning the ability of people and places to cope with such residential transformation Drawing upon case studies from a number of European cities that have undergone far reaching change in their built environments the author shows that supposedly inadaptable people and places show a strong if often hidden degree of flexibility in responding to economic change and building transformation

**Dwell**, 2003-06 At Dwell we re staging a minor revolution We think that it s possible to live in a house or apartment by a bold modern architect to own furniture and products that are exceptionally well designed and still be a regular human being We think that good design is an integral part of real life And that real life has been conspicuous by its absence in most design and architecture magazines

**Critical Regionalism** Liane Lefaivre, Alexander Tzonis, 2003 This richly illustrated and designed book in the Architecture in Focus series reconsiders critical regionalism and demonstrates the global viability of one of the most visible trends in contemporary architecture As globalization increasingly enters every facet of our lives its homogenizing effects on architecture urban spaces and the landscape have compelled architects to embrace the principles of critical regionalism an alternative theory that respects local culture geography and climate In this reexamination of critical regionalism two prominent architectural critics argue for a truce between the seemingly antithetical philosophies of critical regionalism and globalization The authors trace the genesis of critical regionalism to its ancient historical and political roots and focus on its modern expression in the works of Alvar Aalto Richard Neutra Oscar Niemeyer and others They point to the increasing use of the theory in the recent works of a truly global selection of visionary architects including Santiago Calatrava in Spain Renzo Piano in the South Pacific and Berger and Parkkinen in Germany Discussions of Tropical Architecture and contemporary work in Asia round out this important contribution to a topical debate about architecture's role in the world Amazon
