## **Explorations In Functional Syntax Hb:**

**Explorations in Functional Syntax** G. David Morley, 2004-07 Explorations in Functional Syntax develops a practical framework for analysing the syntactic structure of a text from a functional perspective It outlines a model in which the syntactic analysis on a single dimension mirrors the multidimensional meaning structure of the text The syntactic framework thus takes account of semantic concepts such as participants and things processes features and qualities and circumstances all of which constitute elements of ideas But it also deals with the cohesive links which connect ideas and with personal comments etc which may be interspersed amongst them Though set firmly in the mould of systemic functional grammar the book focuses on lexicogrammatical units and relations structural elements configurations and complexities Social context and the semantic stratum are sketched out only as essential background In elaborating a unitary syntactic framework which is functionally orientated so as to reflect the meaning structure of a text the book represents a significant departure from the standard mode of handling lexicogrammar in systemic linguistics Important differences have been introduced with regard firstly to the nature of units on the rank scale and their relationships to structural complexes and secondly to the range and scope of elements of clause structure The book is well illustrated with examples of the descriptive framework in action throughout the text and in a summary end chapter

**The Crosslinguistic Study of Language Acquisition** Dan Isaac Slobin, 2014-03-05 In this final volume in the series the contributors attempt to expand the contexts in which child language has been examined crosslinguistically The chapters build on themes that have been touched on anticipated and promised in earlier volumes in the series The study of child language has been situated in the disciplines of psychology and linguistics and has been most responsive to dominant issues in those fields such as nativism and learning comprehension and production errors input and universals of morphology and syntax The context has primarily been that of the individual child interacting with a parent and deciphering the linguistic code The code has been generally treated in these volumes as a system of morphology and syntax with little attention to phonology and prosody Attention has been paid occasionally to the facts that the child is acquiring language in a sociocultural setting and that language is used in contexts of semantic and pragmatic communication In addition there has been a degree of attention paid to the interactions between language and cognition in the process of development As for individual differences between children they have been discussed in those studies where they could not be avoided but such variation has rarely been the focus of systematic attention Differences between individual languages have been of great interest but these differences have not often been placed in a framework of systematic typological variation And although languages and their grammars change over time the focus of attention on the individual child learner has generally led to neglect of explanatory principles that are best found on the level of linguistic diachrony rather than the level of innate ideas or patterns of learning and cognition in the individual child The chapter authors seek to explore these neglected contexts in more depth
