Ross,H. Paul Hiduk,1992      **Conceptual Modelling in Information Systems Engineering** John Krogstie,Andreas Lothe Opdahl,Sjaak Brinkkemper,2007-06-13 Conceptual modeling has always been one of the cornerstones for information systems engineering as it describes the general knowledge of the system in the so called conceptual schema Krogstie Opdahl and Brinkkemper compiled 20 contributions from renowned researchers covering all aspects of conceptual modeling on the occasion of Arne S lverberg s 67th birthday Many friends of this information systems modeling pioneer happily contributed their latest research results from fields like data modeling goal oriented modeling agent oriented modeling and process oriented modeling Overall the contributions reflect the most important developments and application areas of conceptual modeling in recent years and they also pinpoint trends in conceptual modeling for the next decade This wide selection corresponds to the broad spectrum of Arne s activities and long term responsibilities with the VLDB Endowment IFIP and ERCIM Arne was presented with this book at CAiSE 2007 when the event which he cofounded in 1989 returned to his hometown of Trondheim      **Clinical Information Systems** Bruce I. Blum,2012-12-06 As its name implies this book deals with clinical information systems The clinical information system or CIS is an automated system with a long term database containing clinical information used for patient care This definition excludes business systems no clinical data physiological monitoring systems no long term database and many research systems not used in patient care The theses of this book are a that CIS technology is mature b that the CIS will have a major impact upon patient care and the health delivery system and c

that the number of commercial systems which now offer these potential benefits is very small The objective of this book is to establish the above theses and thereby a inform both users and developers b increase the demand for more sophisticated products and finally c provide marketplace incentives to advance the state of the art The CIS is an application of computer technology for a specific class of problems Its development requires a knowledge of the technology with an understanding of the application area As with any tool based application the scope of the product will be limited by the capability of the tool In the case of the CIS reliable computers with comprehensive database facilities became commercially available in the early 1970s By the mid 1970s there was a maturation of the literature and evaluations of 5 years use began to appear As will be shown there have been surprisingly few new ideas introduced since the 1970s *Implementing Health Care Information Systems* Helmuth F. Orthner, Bruce I. Blum, 2012-12-06 This series in Computers and Medicine had its origins when I met Jerry Stone of Springer Verlag at a SCAMC meeting in 1982 We determined that there was a need for good collections of papers that would help disseminate the results of research and application in this field I had already decided to do what is now Information Systems for Patient Care and Jerry contributed the idea of making it part of a series In 1984 the first book was published and thanks to Jerry s efforts Computers and Medicine was underway Since that time there have been many changes Sadly Jerry died at a very early age and cannot share in the success of the series that he helped found On the bright side however many of the early goals of the series have been met As the result of equipment improvements and the consequent lowering of costs computers are being used in a growing number of medical applications and the health care community is very computer literate Thus the focus of concern has turned from learning about the technology to understanding how that technology can be exploited in a medical environment Management ,1986 **NASA SP-7500** United States. National Aeronautics and Space Administration,1982 **Natural Language Processing and Information Systems** Farid Meziane,2004-08-13 This book constitutes the refereed proceedings of the 9th International Conference on Applications of Natural Language to Information Systems NLDB 2004 held in Salford UK in June 2004 The 29 revised full papers and 13 revised short papers presented were carefully reviewed and selected from 65 submissions The papers are organized in topical sections on natural language conversational systems intelligent querying linguistic aspects of modeling information retrieval natural language text understanding knowledge bases knowledge management and content management Undergraduate Announcement University of Michigan--Dearborn,1991 Model-Based Development and Evolution of Information Systems John Krogstie,2012-05-17 This book introduces and describes in detail the SEQUAL framework for understanding the quality of models and modeling languages including the numerous specializations of the generic framework and the various ways in which this can be used for different applications Topics and features contains case studies chapter summaries review questions problems and exercises throughout the text in addition to Appendices on terminology and abbreviations presents a thorough introduction to the most important concepts in conceptual modeling
