*Global Engineering, Manufacturing and Enterprise Networks* John P.T. Mo, Laszlo Nemes, 2013-06-29 The availability of effective global communication facilities in the last decade has changed the business goals of many manufacturing enterprises. They need to remain competitive by developing products and processes which are specific to individual requirements completely packaged and manufactured globally. Networks of enterprises are formed to operate across time and space with world wide distributed functions such as manufacturing sales customer support engineering quality assurance supply chain management and so on. Research and technology development need to address architectures methodologies models and tools supporting intra and inter enterprise operation and management. Throughout the life cycle of products and enterprises there is the requirement to transform information sourced from globally distributed offices and partners into knowledge for decision and action. Building on the success of previous DrrSM conferences Tokyo 1993 Eindhoven 1996 Fort Worth 1998 the fourth International Conference on Design of Information Infrastructure Systems for Manufacturing DrrSM 2000 aims to Establish and manage the dynamics of virtual enterprises define the information system requirements and develop solutions. Develop and deploy information management in multi cultural systems with universal applicability of the proposed architecture and solutions. Develop enterprise integration architectures methodologies and information infrastructure support for reconfigurable enterprises. Explore information transformation into knowledge for decision and action by machine and skilful people. These objectives reflect changes of the business processes due to advancements of information and communication technologies ICT in the last couple of years. *Model-Based Development and Evolution of Information Systems* John Krogstie, 2012-05-17 This book introduces and describes in detail the SEQUAL framework for understanding the quality of models and modeling languages including the numerous specializations of the generic framework and the various ways in which this can be used for different applications. Delcambre, 2011-02-04 Conceptual modeling represents a recent approach to creating knowledge It has emerged in response to the computer revolution which started in the middle of the 20th century Computers in the

meantime have become a major knowledge media Conceptual modeling provides an answer to the difficulties experienced throughout the development of computer applications and aims at creating effective reasonably priced and sharable knowledge about using computers in business Moreover it has become evident that conceptual modeling has the potential to exceed the boundaries of business and computer usage This state of the art survey originates from the International Seminar on the Evolution of Conceptual Modeling held in Dagstuhl Castle Germany in April 2008 The major objective of this seminar was to look into conceptual modeling from a historical perspective with a view towards the future of conceptual modeling and to achieve a better understanding of conceptual modeling issues in several different domains of discourse going beyond individual modeling projects The book contains 14 chapters These were carefully selected during two rounds of reviewing and improvement from 26 presentations at the seminar and are preceded by a detailed preface providing general insights into the field of conceptual modeling that are not necessarily discussed in any of the chapters but nevertheless aid in conceptualizing the inner structure and coherence of the field The chapters are grouped into the following three thematic sections the evolution of conceptual modeling techniques the extension of conceptual modeling to a service oriented peer to peer or Web context and new directions for conceptual modeling

**Metrics for Process Models** Jan Mendling,2008-10-20

Business process modeling plays an important role in the management of business processes As valuable design artifacts

business process models are subject to quality considerations The absence of formal errors such as deadlocks is of

paramount importance for the subsequent implementation of the process In his book Jan Mendling develops a framework for

the detection of formal errors in business process models and the prediction of error probability based on quality attributes

of these models metrics He presents a precise description of Event driven Process Chains EPCs their control flow semantics

and a suitable correctness criterion called EPC soundness
