*Intelligent Document Retrieval* Udo Kruschwitz, 2006-01-09 Collections of digital documents can nowadays be found everywhere in institutions universities or companies Examples are Web sites or intranets But searching them for information can still be painful Searches often return either large numbers of matches or no suitable matches at all Such document collections can vary a lot in size and how much structure they carry What they have in common is that they typically do have some structure and that they cover a limited range of topics The second point is significantly different from the Web in general The type of search system that we propose in this book can suggest ways of refining or relaxing the query to assist a user in the search process In order to suggest sensible query modifications we would need to know what the documents are about Explicit knowledge about the document collection encoded in some electronic form is what we need However typically such knowledge is not available So we construct it automatically

Information Reuse and Integration in Academia and Industry Tansel Özyer, Keivan Kianmehr, Mehmet Tan, Jia Zeng, 2013-11-08. The present work covers the latest developments and discoveries related to information reuse and integration in academia and industrial settings. The need for dealing with the large volumes of data being produced and stored in the last decades and the numerous systems developed to deal with these is increasingly necessary. Not all these developments could have been achieved without the investing large amounts of resources. Over time, new data sources evolve and data integration continues to be an essential and vital requirement. Furthermore, systems and products need to be revised to adapt new technologies and needs. Instead of building these from scratch, researchers in the academia and industry have realized the benefits of reusing existing components that have been well tested. While this trend avoids reinventing the wheel, it comes at the cost of finding the optimum set of existing components to be utilized and how they should be integrated together and with the new non-existing components which are to be developed. These nontrivial tasks have led to challenging research problems in the academia and industry. These issues are addressed in this book, which is intended to be a unique resource for researchers, developers, and

practitioners     *Enterprise Search* Martin White,2012-11-30 Is your organization rapidly accumulating more information than you know how to manage This book helps you create an enterprise search solution based on more than just technology Author Martin White shows you how to plan and implement a managed search environment that meets the needs of your business and your employees Learn why it s vital to have a dedicated staff manage your search technology and support your users In one survey 93% of executives said their organization is losing revenue because they re not fully able to use the information they collect With this book business managers IT managers and information professionals can maximize the value of corporate information and data assets Use 12 critical factors to gauge your organization s search needs Learn how to make a business case for search Research your user requirements and evaluate your current search solution Create a support team with technical skills and organizational knowledge to manage your solution Set quality guidelines for organizational content and metadata Get an overview of open source and commercial search technology Choose an application based on your requirements not for its features Make mobile and location independent search part of your solution     **Theoretical Advances and Applications of Fuzzy Logic and Soft Computing** Oscar Castillo,Patricia Melin,Oscar Montiel Ross,Roberto Sepúlveda Cruz,Witold Pedrycz,2007-10-10 This book comprises a selection of papers on theoretical advances and applications of fuzzy logic and soft computing from the IFSA 2007 World Congress held in Cancun Mexico June 2007 These papers constitute an important contribution to the theory and applications of fuzzy logic and soft computing methodologies
