Transmission of Information by Orthogonal Functions Henning F. Harmuth, 2013-04-17 The orthogonality of functions has been exploited in communications since its very beginning Conscious and 1 extensive use was made of it by KOTEL NIKOV in theoretical work in 1947 Ten years later a considerable number of people were working in this field rather independently However little experimental use could be made of the theoretical results before the arrival of solid state operational amplifiers and integrated circuits A theory of communication based on orthogonal functions could have been published many years ago However the only useful examples of orthogonal functions at that time were sine cosine functions and block pulses and this made the theory appear to be a complicated way to derive known results It was again the advance of semiconductor technology that produced the first really new useful example of orthogonal functions the little known Walsh functions In this book emphasis is placed on the Walsh functions since ample literature is available on sine cosine functions as well as on block pulses and pulses derived from them
