Combinatorial Connectivities in Social Systems ATKIN, 2013-11-27 This book is a presentation of my recent research work into the theory and applications of mathematical relations between finite sets The consequent results and concepts are expressed in conjunction with the idea of a union of simplicial complexes and the algorithms and overall methodology have become known as Q Analysis The mathematical ideas are essentially combinatorial and are developed in Section A of the book whilst Section R contains an application to a community study that of the University of Essex All of the work has been published elsewhere in the usual form of papers and a comprehensive introduction to the whole approach will be found in my earlier book *Mathematical Structure in Human Affairs* Heinemann London 1974 Much of the research work referred to in this present book would not have been possible without the co operation of my research team of whom I would particularly like to thank J I Johnson and its publication owes a lot to the secretarial help provided by Iary Low R H Atkin University of Essex U K

Computer Representation of the Stereochemistry of Organic Molecules DAVIS, 2013-11-11 The role of the computer in the practice of organic chemistry has been firmly established over the past decade Its uses as a large scale information storage and retrieval device in chemistry have been too numerous to mention More recently the applicability of computers to the problem of discovering valid and reasonable synthesis routes for organic molecules has been demonstrated This has been both as an adjunct to the 1 chemist in the on line interactive mode 2 3 and also as a wholly computer directed system seeking to simulate the intelligent problem solving activity of the human organic synthetic chemist 5 In all of these computer applications to organic chemistry it has been necessary to devise some computer compatible representation of an organic molecule that is both canonical and convenient for table look ups This is in order that entities that have been constructed at different times under different circumstances can be identified and classified with identical molecules being recognized as such even if their connection matrices list the elements of the molecule in different orders E J Corey and W T Wipke *Science* 166 178 1969 2 E J Corey W T Wipke R D Cramer III and W J Howe *J Americ Chern Soc* 94 421 1972 and 431 1972 3 E J Corey R D Cramer III and W J Howe *Americ Chern Soc* 94 440 1972 4 H L Gelernter N S Sridharan and A J

would like to thank Robert Axelrod and Gary Raffel of the University of Michigan for generating the graph PART I

INTRODUCTION 1 CHAPTER 1 THOUGHT AND ACTION IN FOREIGN POLICY G MATTHEW BONHAM The American University MICHAEL J SHAPIRO University of Hawaii Introduction The papers assembled here constitute and to some extent represent widely disparate views of foreign policy thinking and decision making As is the case with almost any collective enterprise it is possible to suggest some noteworthy resemblances among the contributions to this volume and to indicate grounds for distinguishing them from other approaches

Overlapping Tendencies in Operations Research Systems Theory and Cybernetics BILLETER,2013-12-01 0 1 Gaps in Optimizing A comparison of the levels of development of Operations Research Simulation Technique and Optimal Control Theory appears to gain increasing interest Operations Research Sciences achieved very high mathematical standards and solved a great amount of important optimization problems mainly at the level of management of private corporation and civil or military government tasks however these achievements are seldom incorporated in the mathematical curriculum of modern universities Nevertheless Operations Research seems to have failed in solving long range or strategical problems as they arise in any broader social economical or political context MULLER Merbach 1976 Also for the weakest task namely that of improving theory building system simulation works as an optimization tool Simulation models of large complex systems like socio economical or political ones failed until now to fit large empirical data bases This was in fact one of the few serious objections against the form in which Forrester solved some problems modelling and simulating urban and world developments Forrester 1969 Forrester 1971 IEEE SCC October 1970 IEEE SMC April 1972 Mass 1974 Schroeder 1975

Automatic Coding: Choice of Data Structures LOW,2013-12-20 1 0 2 information structures and the runtime efficiency available using lower level data structures We believe these runtime inefficiencies can be remedied by providing a library of representations for the information structures and a user assisted automatic system to choose appropriate elements from this library for the user's programs The main problems in such an automatic approach are 1 Building a library of representations 2 Characterizing the properties of these representations 3 understanding how the user's program actually uses the abstract information structures and 4 efficiently matching the user program needs with the properties of the known representations The research reported here is an attempt to demonstrate the feasibility of such automatic representation selection We allow the user to express data in terms of relations sets and sequences Our system then obtains information by analysis of the program execution statement profiles and interrogation of the user Using that information the system selects efficient in terms of time and space low level implementations for the user's information structures from a fixed library of information structure representations Though we have considered only a few abstract information structures those available in our programming language SAIL we believe the techniques used in this system are generally applicable

Enterprise Operations Management Handbook, Second Edition Steven F. Blanding,2020-10-14 The Enterprise Operations Management Handbook provides the expert advice and

guidance of hundreds of leading computing practitioners and consultants Covering all major areas of enterprise operations management this edition provides essential information for managing a modern evolving data center Topics include business issues technology issues and operational issues This current practical reference also reviews such critical areas as strategic planning data center management data center controls systems planning network technology contingency planning human resource planning desktop computing and future directions The Enterprise Operations Management Handbook serves as an invaluable tool for designing building and maintaining a high performance service oriented data center **Handbook of Research on User Interface Design and Evaluation for Mobile Technology** Lumsden, Joanna, 2008-02-28 This book compiles authoritative research from scholars worldwide covering the issues surrounding the influx of information technology to the office environment from choice and effective use of technologies to necessary participants in the virtual workplace Provided by publisher Pattern Recognition and Artificial Intelligence C.H. Chen, 2013-12-11 Pattern Recognition and Artificial Intelligence contains the proceedings of the Joint Workshop on Pattern Recognition and Artificial Intelligence held in Hyannis Massachusetts on June 1 3 1976 The papers explore developments in pattern recognition and artificial intelligence and cover topics ranging from scene analysis and data structure to syntactic methods biomedicine speech recognition game playing programs and computer graphics Grammar inference methods image segmentation and interpretation and relational databases are also discussed This book is comprised of 29 chapters and begins with a description of a data structure that can learn simple programs from training samples The reader is then introduced to the syntactic parts of pattern recognition systems methods for multidimensional grammatical inference a scene analysis system capable of finding structure in outdoor scenes and a language called DEDUCE for relational databases A sculptor's studio like environment in which the sculptor can create complex three dimensional objects in the computer similar to molding a piece of clay in the machine is also described The remaining chapters focus on statistical and structural feature extraction use of maximum likelihood functions for recognition of highly variable line drawings region extraction using boundary following and interactive screening of reconnaissance imagery This monograph will be of interest to engineers graduate students and researchers in the fields of pattern recognition and artificial intelligence **Scientific Computing in Object-Oriented Parallel Environments** Yutaka Ishikawa, 1997-11-19 Content Description Includes bibliographical references and index **Computer recognition of human faces** KANADE, 2013-12-01 Picture processing by computer has found its application in various fields Character recognition has shown the most practical success Furthermore the techniques span much more sophisticated applications such as interpretation of biomedical images and X ray films measurement of images in nuclear physics processing of a large volume of pictorial data sent from the satellites etc The particular problem attacked in this thesis is computer analysis and identification of human faces Pictures of human faces are successfully analyzed by a computer program which extracts face feature points such as nose mouth eyes and so on The

program was tested with more than 800 photographs The research has been done with main emphasis on the method of how to incorporate the picture structures into the picture analysis program The success of the program is due to the employment of a flexible picture analysis scheme with feedbacks which will be described in the next chapter An experiment on face identification of 20 people was also conducted

1 Picture Analysis and Recognition New Aspects When shown the pictures of the human face of Fig 1 1 we can immediately tell the positions of the nose mouth and eyes and more over we can say that both pictures surely portray the same person Picture analysis and recognition by computer concerns itself with this type of two dimensional image processing In this thesis I selected human face pictures as objects of processing

Shape Grammars and their Uses GIPS,2013-12-01 Shape grammars provide a means for the recursive specification of shapes The formalism for shape grammars is designed to be easily usable and understandable by people and at the same time to be adaptable for use in computer programs Shape grammars are similar to phrase structural grammars which were developed by Chomsky 1956 1957 Where a phrase structural grammar is defined over an alphabet of symbols and generates a language of sequences of symbols a shape grammar is defined over an alphabet of shapes and generates a language of shapes This dissertation explores the uses of shape grammars The dissertation is divided into three sections and an appendix In the first section Shape grammars are defined Some simple examples are given for instructive purposes Shape grammars are used to generate a new class of reversible figures Shape grammars are given for some well known mathematical curves the Snowflake curve a variation of Peano's curve and Hilbert's curve To show the general computational power of shape grammars a procedure that given any Turing machine constructs a shape grammar that simulates the operation of that Turing machine is presented Related work on various formalisms for picture grammars is described A symbolic characterization of shape grammars is given that is useful for implementing shape grammars in computer programs

Systems Theory in the Social Sciences BOSSEL, 2013-11-11 In an ever more complex and interrelated world a better understanding of social systems and of the dynamics of their behavior is of crucial importance Many of the tools holding promise of potentially significant contributions to the analysis of social systems have been or are being developed outside of the social sciences proper mostly the loose collection of diverse scientific approaches called systems science or systems theory The editors all of whom are involved in social systems analysis have made an attempt in this volume to pull together several aspects of systems science which appear to them to be of particular relevance to the study of social systems Control systems stochastic systems pattern recognition fuzzy analysis simulation and behavioral models 29 authors from the disciplines of sociology social psychology political science management science history behavioral science economics mathematics engineering and systems science have contributed to this truly interdisciplinary effort All of them have made the attempt to write in a manner understandable by the non specialist It is hoped that this volume will be of particular usefulness to students in the social sciences Most of the articles are too short to provide much more than an initial stimulation We trust that the references provided by the authors will allow deeper penetration into particular areas
