Al-Khayri, Shri Mohan Jain, Muneeb Ahmad Wani, 2025-02-08 Flowers and other ornamental plants are

used for all occasions to meet consumers demands preferably novel flowers traits e g fragrance flower color and shape early flowering less water consumption long shelf life The worldwide floricultural industry is worth over 50 billion Euros and can serve as a food security socio economic impact and generate employment Ornamental industry is regarded as one of the fastest growing farm industries This industry is sustained through novelty thus there is increasing demand on plant breeders in both public and private sectors to fulfil consumer s needs Biotechnological approaches such as genetic transformation genomics nanotechnology and gene editing are well suited for designing custom made novel traits of flowers benefiting both ornamental and cosmetic industry Moreover micropropagation is well exploited commercially for large scale plant production along with vertical and digital farming and artificial intelligence especially by the floriculture industry This book focuses on advances in breeding strategies of diverse range of ornamental plants It consists of 2 parts Part I Flowering annuals and Part II Cut flowers Each chapter contributed by eminent authors is devoted to an individual ornamental species or a group of related species It provides an in depth understanding of modern breeding strategies including traditional methods and biotechnological approaches Topics covered in each chapter in relation to the subject species include current cultivation practices and challenges germplasm biodiversity and conservation traditional breeding molecular breeding tissue culture applications genetic engineering and gene editing mutation breeding hybridization and future research directions Major concepts are illustrated with color photos

Poppy, Michael J. Wilkinson, 2008-04-15 Gene flow is not unique to genetically modified GM crops but the possibility of the spread of transgenic DNA to wild and domesticated relatives raises a new set of issues for scientists and policymakers to consider Unfortunately we are still too often unable to quantify the risks of ecological damage associated with gene flow This is due partly to the huge breadth of knowledge required to assemble a comprehensive risk assessment For example many scientists active in research on the mechanics of gene flow nevertheless lack a deep

understanding of what is required to identify characterise and assess ecological risk and many of those who are aware of the risk assessment process and the framework used for legislation have insufficient knowledge of the reproductive biology agricultural systems modelling and ecological literature required to compile a balanced risk assessment This book set in the context of gene flow in general considers the assessment measurement and management of the risks of gene flow from GM plants combining the expertise of all the various stakeholders It is directed at researchers and professionals in plant molecular genetics and plant ecology in both the academic and industrial sectors Wildflowers of Maine, New Hampshire, and Vermont in Color Alan E.
