Festschrift For Erich L Lehmann:

A Festschrift For Erich L. Lehmann Peter J. Bickel, K. Doksum, J. L. Hodges, 1982-02-01 A collection of essays and articles in honour of Erich L. Lehmann's sixty fifth birthday. Including works on Vector Autoregressive models, Bootstrapping Regression Models, Bootstrapping Regression Models and Estimation of the Mean or Total when Measurement Protocols

A Festschrift for Erich L. Lehmann in Honor of His 65th Birthday Peter J. Bickel, Kjell A. Doksum, Joseph Lawson Hodges, 1983 **A Festschrift for Erich L. Lehmann** Erich Leo Lehmann, 1983 **An Introduction to the Bootstrap** Bradley Efron, R. J. Tibshirani, 1994-05-15 Statistics is a subject of many uses and surprisingly few effective practitioners. The traditional road to statistical knowledge is blocked for most by a formidable wall of mathematics. The approach in *An Introduction to the Bootstrap* avoids that wall. It arms scientists and engineers as well as statisticians with the computational techniques they need to analyze and understand complicated data sets. Spatial Econometrics: Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity, critical aspects of the data used by regional scientists. These characteristics may cause standard econometric techniques to become inappropriate. In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics. My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics. My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics, e.g. most recently by Cliff and Ord 1981 and Upton and Fingleton 1985, in that I am mostly concerned with the relevance of spatial effects on model specification, estimation, and other inference in what I call a model-driven approach as opposed to a data-driven approach in spatial statistics. I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis. *Robustness in Data Analysis* Georgy L. Shevlyakov, Nikita O. Vilchevski, 2011-12-07 The series is devoted to the publication of high level monographs and surveys which cover the whole spectrum of probability and statistics. The books of the series are addressed to both experts and advanced students. Theory and Applications of Recent Robust Methods Mia Hubert, Greet Pison, Anja Struyf, Stefan Van Aelst, 2012-12-06 Intended for both researchers and practitioners, this book will be a valuable resource for studying and applying recent robust statistical methods. It contains up to date research results in the theory of robust statistics, treats computational aspects and algorithms, and shows interesting and new applications. Statistics in Genetics and in the Environmental Sciences Luisa T. Fernholz, Stephan Morgenthaler, Werner Stahel, 2012-12-06 Statistics is strongly tied to applications in different scientific disciplines, and the most challenging statistical problems arise from problems in the sciences. In fact, the most innovative statistical research flows from the needs of applications in diverse settings. This volume is a testimony to the crucial role that statistics plays in scientific disciplines such as genetics and environmental sciences.

among others The articles in this volume range from human and agricultural genetic DNA research to carcinogens and chemical concentrations in the environment and to space debris and atmospheric chemistry Also included are some articles on statistical methods which are sufficiently general and flexible to be applied to many practical situations The papers were refereed by a panel of experts and the editors of the volume The contributions are based on the talks presented at the Workshop on Statistics and the Sciences held at the Centro Stefano Franscini in Ascona Switzerland during the week of May 23 to 28 1999 The meeting was jointly organized by the Swiss Federal Institutes of Technology in Lausanne and Zurich with the financial support of the Minerva Research Foundation As the presentations at the workshop helped the participants recognize the potential role that statistics can play in the sciences we hope that this volume will help the reader to focus on the central role of statistics in the specific areas presented here and to extrapolate the results to further applications

Statistical Modelling Adriano Decarli, Brian J. Francis, Robert Gilchrist, Gilg U.H. Seeber, 2012-12-06 This volume constitutes the Proceedings of the joint meeting of GLIM89 and the 4th International Workshop on statistical Modelling held in Trento Italy from 17 to 21 July 1989 The meeting aimed to bring together researchers interested in the development and application of generalized linear modelling in GLIM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops held in Innsbruck Perugia and Vienna and upon the two previous GLIM conferences GLIM82 and GLIM85 The Proceedings of the latter two being available as numbers 14 and 32 in the Springer Verlag series of Lecture Notes in Statistics Much statistical modelling is carried out using GLIM as is apparent from many of the papers in these Proceedings however the Programme Committee were also keen on encouraging papers which discussed more general modelling techniques Thus about a third of the papers in this volume are outside the GLIM framework The Programme Committee specifically requested non theoretical papers in addition to considering theoretical contributions Thus there are papers in a wide range of practical areas such as radio spectral occupancy comparison of birthweights intervals between births accidents of railway workers genetics demography medical trials the social sciences and insurance A wide range of theoretical developments are discussed for example overdispersion non exponential family modelling novel approaches to analysing contingency tables random effects models Kalman Filtering model checking and extensions of Wedderburn's theoretical underpinning of GLMs

Cohort Analysis in Social Research W.M. Mason, S. Fienberg, 2012-12-06 The existence of the present volume can be traced to methodological concerns about cohort analysis all of which were evident throughout most of the social sciences by the late 1970s For some social scientists they became part of a broader discussion concerning the need for new analytical techniques for research based on longitudinal data In 1976 the Social Science Research Council SSRC with funds from the National Institute of Education established a Committee on the Methodology of Longitudinal Research The scholars who comprised this committee are listed at the front of this volume As part of the efforts of this Committee an interdisciplinary conference on cohort analysis was held in the summer of 1979 in

Snowmass Colorado Much of the work presented here stems from that conference the purpose of which was to promote the development of general methodological tools for the study of social change The conference included five major presentations by 1 William Mason and Herbert Smith 2 Karl J6reskog and Dag S6rbom 3 Gregory Markus 4 John Hobcraft Jane Menken and Samuel Preston and 5 Stephen Fienberg and William Mason The formal presentations were each followed by extensive discussion which involved as participants Paul Baltes William Butz Philip Converse Otis Dudley Duncan David Freedman William Meredith John Nesselroade Daniel Price Thomas Pullum Peter Read Matilda White Riley Norman Ryder Warren Sanderson Warner Schaie Burton Singer Nancy Tuma Harrison White and Halliman Winsborough **S R. A. Becker**,J. M. Chambers,1984-02-01 The latest edition of this manual provides documentation for users of the statistical software system S

Graph Theory and Combinatorial Optimization David Avis,Alain Hertz,Odile Marcotte,2005-12-06 Graph theory is very much tied to the geometric properties of optimization and combinatorial optimization Moreover graph theory s geometric properties are at the core of many research interests in operations research and applied mathematics Its techniques have been used in solving many classical problems including maximum flow problems independent set problems and the traveling salesman problem Graph Theory and Combinatorial Optimization explores the field s classical foundations and its developing theories ideas and applications to new problems The book examines the geometric properties of graph theory and its widening uses in combinatorial optimization theory and application The field s leading researchers have contributed chapters in their areas of expertise **Unified Methods for Censored Longitudinal Data and Causality** Mark J. van der

Laan,James M Robins,2012-11-12 During the last decades there has been an explosion in computation and information technology This development comes with an expansion of complex observational studies and clinical trials in a variety of fields such as medicine biology epidemiology sociology and economics among many others which involve collection of large amounts of data on subjects or organisms over time The goal of such studies can be formulated as estimation of a finite dimensional parameter of the population distribution corresponding to the observed time dependent process Such estimation problems arise in survival analysis causal inference and regression analysis This book provides a fundamental statistical framework for the analysis of complex longitudinal data It provides the first comprehensive description of optimal estimation techniques based on time dependent data structures subject to informative censoring and treatment assignment in so called semiparametric models Semiparametric models are particularly attractive since they allow the presence of large unmodeled nuisance parameters These techniques include estimation of regression parameters in the familiar multivariate generalized linear regression and multiplicative intensity models They go beyond standard statistical approaches by incorporating all the observed data to allow for informative censoring to obtain maximal efficiency and by developing estimators of causal effects It can be used to teach masters and Ph D students in biostatistics and statistics and is suitable for researchers in statistics with a strong interest in the analysis of complex longitudinal data **Frontiers in Statistics** Jianqing Fan,2006 During the

last two decades many areas of statistical inference have experienced phenomenal growth This book presents a timely analysis and overview of some of these new developments and a contemporary outlook on the various frontiers of statistics Eminent leaders in the field have contributed 16 review articles and 6 research articles covering areas including semi parametric models data analytical nonparametric methods statistical learning network tomography longitudinal data analysis financial econometrics time series bootstrap and other re sampling methodologies statistical computing generalized nonlinear regression and mixed effects models martingale transform tests for model diagnostics robust multivariate analysis single index models and wavelets This volume is dedicated to Prof Peter J Bickel in honor of his 65th birthday The first article of this volume summarizes some of Prof Bickel s distinguished contributions

Statistical Methods in Bioinformatics

Warren J. Ewens, Gregory R. Grant, 2005-11-18 Advances in computers and biotechnology have had a profound impact on biomedical research and as a result complex data sets can now be generated to address extremely complex biological questions Correspondingly advances in the statistical methods necessary to analyze such data are following closely behind the advances in data generation methods The statistical methods required by bioinformatics present many new and difficult problems for the research community This book provides an introduction to some of these new methods The main biological topics treated include sequence analysis BLAST microarray analysis gene finding and the analysis of evolutionary processes The main statistical techniques covered include hypothesis testing and estimation Poisson processes Markov models and Hidden Markov models and multiple testing methods The second edition features new chapters on microarray analysis and on statistical inference including a discussion of ANOVA and discussions of the statistical theory of motifs and methods based on the hypergeometric distribution Much material has been clarified and reorganized The book is written so as to appeal to biologists and computer scientists who wish to know more about the statistical methods of the field as well as to trained statisticians who wish to become involved with bioinformatics The earlier chapters introduce the concepts of probability and statistics at an elementary level but with an emphasis on material relevant to later chapters and often not covered in standard introductory texts Later chapters should be immediately accessible to the trained statistician Sufficient mathematical background consists of introductory courses in calculus and linear algebra The basic biological concepts that are used are explained or can be understood from the context and standard mathematical concepts are summarized in an Appendix Problems are provided at the end of each chapter allowing the reader to develop aspects of the theory outlined in the main text Warren J Ewens holds the Christopher H Brown Distinguished Professorship at the University of Pennsylvania He is the author of two books Population Genetics and Mathematical Population Genetics He is a senior editor of Annals of Human Genetics and has served on the editorial boards of Theoretical Population Biology GENETICS Proceedings of the Royal Society B and SIAM Journal in Mathematical Biology He is a fellow of the Royal Society and the Australian Academy of Science Gregory R Grant is a senior bioinformatics researcher in the University of Pennsylvania Computational Biology and

Informatics Laboratory He obtained his Ph D in number theory from the University of Maryland in 1995 and his Masters in Computer Science from the University of Pennsylvania in 1999 Comments on the first edition This book would be an ideal text for a postgraduate course and is equally well suited to individual study I would recommend the book highly Biometrics Ewens and Grant have given us a very welcome introduction to what is behind those pretty graphical user interfaces Naturwissenschaften The authors do an excellent job of presenting the essence of the material without getting bogged down in mathematical details Journal American Statistical Association The authors have restructured classical material to a great extent and the new organization of the different topics is one of the outstanding services of the book Metrika
